Subsection 6.—Production of Structural Materials

Active construction throughout Canada has kept production of structural materials at a high level in recent years. However, the trend turned slightly downward in 1960 when the total value of these materials declined by 3 p.c. compared with 1959. For Canada as a whole, only the output of sand and gravel was higher than in 1959. In point of value, this is the most important of the structural materials, followed by cement, stone, clay products and lime. Developments in certain structural materials industries during 1959-60 are covered in the review at pp. 522-523.

Sand and Gravel.—Deposits of sand and gravel are numerous throughout Eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of haul. This accounts for the large number of small pits and the small number of large plants in operation. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries command much higher prices than ordinary sand. The greater part of the sand and gravel output is used in road improvement, concrete works or as railway ballast and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

26.—Quantity and Value of Sand, and Sand and Gravel Produced, 1957-59

Material and Purpose	1957		1958		1959	
	Quantity	Gross Value	Quantity	Gross Value	Quantity	Gross Value
	tons	$	tons	$	tons	$
Sand—						
Moulding sand	17,618	60,284	21,346	98,179	[1]	[1]
For building, concrete, roads, etc.	14,173,048	9,673,088	13,232,445	11,902,625	15,556,197	13,325,181

Totals, Sand and Gravel	**159,829,512**	**91,939,354**	**160,210,945**	**96,282,363**	**185,123,746**	**104,651,461**

[1] Included under feldspar and quartz in 1959.

In 1960 an estimated 189,961,321 tons of sand and gravel were produced, valued at $110,086,610. This represented an increase of 2.6 p.c. in quantity and 5.2 p.c. in value over 1959. Quebec and Ontario together contributed 64.9 p.c. of the quantity. The breakdown of these totals by purpose was not available at the time of going to press.

Cement.—The production of cement in Canada reached its peak in 1959, decreasing 9.3 p.c. in 1960. Consumption was down in 1960 by 7.8 p.c., interrupting the steadily upward trend in evidence throughout the postwar period. Of the Canadian total of 5,697,859 tons produced in 1960, Ontario contributed 34.2 p.c. and Quebec 32.2 p.c. and all other provinces except Prince Edward Island and Nova Scotia contributed varying amounts; the output decreases in 1960 all took place in Ontario, Quebec, British Columbia, Alberta and New Brunswick.

27.—Quantity and Value of Production, Imports, Exports and Apparent Consumption of Cement, 1951-60

Note.—Figures from 1910 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

Year	Shipments (sold or used)		Imports	Exports	Apparent Consumption[1]
	tons	$	tons	tons	tons
1951	2,976,367	40,446,288	407,300	453	3,383,214
1952	3,241,095	48,059,470	509,947	754	3,750,288

1958	6,153,421	96,414,142	41,555	141,250	6,053,726
1959	6,284,486	95,147,798	29,256	303,126	6,010,616
1960p	5,697,859	91,111,862	22,478	181,117	5,539,220

[1] Shipments plus imports less exports.

[2] Includes imported clinker, other than white.

Stone.—The stone industry has two main divisions—stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries of Canada yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada in 1960 was estimated at $56,678,612 as compared with $60,958,784 in 1959 and $55,582,929 in 1958. Details for 1960 were not available at time of going to press.

28.—Quantity and Value of Stone Produced, 1957-59

Type	1957		1958		1959	
	Quantity	Gross Value	Quantity	Gross Value	Quantity	Gross Value

[1] Includes minor items not specified.

Clay Products.—The sales value of clay products produced in 1960 was 5.8 p.c. lower than the peak production of 1959. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale, nor have the ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan been developed to any extent.

29.—Value (Total Sales) of Clay Products Produced, by Province, 1951-60

Note.—Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Year	Newfoundland	Nova Scotia	New Brunswick	Quebec	Ontario

Section 5.—Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries such as the copper-gold, silver-lead-zinc, and nickel-copper industries as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, salaries and wages paid and net value of shipments.

The figures for 'net value of shipments' of industries given in Tables **30** and **31** are, in each table, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table **2**, pp. 544-545 where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process.

Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used, and of cobalt which is derived mainly from African ores. The net shipments of these plants include, therefore, the net value of the metals recovered from these imported ores and to this extent the net shipments shown in Tables **30** and **31** include products of other than Canadian origin.

30.—Summary Statistics of the Mineral Industry, by Province, 1959

Province or Territory	Plants or Mines	Em-ployees	Salaries and Wages	Purchased Fuel, Electricity and Process Supplies[1]	Net Value of Shipments[2]
	No.	No.	$	$	$
Newfoundland	389	4,001	15,847,209	22,320,518	47,284,499

---

[1] Includes freight and smelter charges and cost of ores treated.

[2] Gross value of shipments less cost o process supplies, fuel, electricity, freight and smelter charges.

[3] Includes natural abrasives.

Section 6.—World Production of Certain Metallic Minerals and Fuels

Table **32** shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1959. These figures are taken from the *United Nations Statistical Yearbook 1960* which presents production figures for 1948-59 for a much more extensive list of mining and quarrying industries. The 1959 figures are provisional and have been converted from kilograms to ounces troy for gold, from metric tons to ounces troy for silver, and from metric tons to short tons for the other metals and fuels shown.

32.—World Production of Certain Metallic Minerals and Fuels, 1959

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nations Statistical Yearbook* either because there was no production or because the quantity was not available.

CHAPTER XII.—POWER GENERATION AND UTILIZATION

CONSPECTUS

	Page		Page
Section 1. Water Power Resources—Available and Developed	568	Section 4. Water and Thermal Power Developments in the Provinces and Territories, 1960	578
Section 2. Thermal Power	571	Section 5. Ownership and Regulation of Electrical Utilities	582
Section 3. Electric Power Statistics	574		

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Water Power Resources—Available and Developed*

Canada, a land of many lakes and rivers, has been favoured by nature with great water power resources distributed across the country. Adequate precipitation and favourable topography result in numerous fast-flowing rivers which offer excellent opportunities for the development of hydraulic power; with the exception of the prairies of the mid-west, water power resources of importance are found in almost every part of the country. British Columbia, traversed by three distinct mountain ranges and with a relatively high rate of precipitation, has many mountain rivers that offer opportunity for power development. Extensive water power resources are available in the Yukon Territory, principally on the Yukon River and its tributaries. Alberta, although a prairie province, also has mountain streams from the Rockies and great reserves of undeveloped power on its large northern rivers. The Canadian Shield of Precambrian rock, which forms an arc around Hudson Bay and covers a portion of the Northwest Territories and northern Saskatchewan as well as large parts of Manitoba, Ontario, Quebec and Labrador, is a rough, forest-covered area characterized by innumerable lakes and by rivers with many falls and rapids. The Great Lakes–St. Lawrence River system and its tributaries provide the extensive power resources of Ontario and Quebec upon which their status as the principal manufacturing provinces of Canada is dependent and which compensate in large degree for their lack of indigenous coal. In New Brunswick and Nova Scotia and on the Island of Newfoundland precipitation is moderately heavy and the rivers, though not large, afford numerous possibilities for power developments of moderate size. In Labrador the potential resources of the Hamilton River are outstanding.

An accurate comparison of the magnitude and development of Canada's water power resources with those of other countries is not possible because world statistics are incomplete and are tabulated on differing bases. However, from the information available, it appears that Canada ranks second among the countries of the world in total installed capacity, being exceeded only by the United States; in installation per thousand population,

---

* Revised by the Water Resources Branch, Department of Northern Affairs and National Resources, Ottawa.

Canada is exceeded only by Norway. Canada is in approximately fifth place in potential power resources but, on the whole, those resources are more readily available to prospective markets than are the water power resources of other countries that outrank Canada, an exception being the United States. In particular might be mentioned the enormous potential resources of the great river systems of Africa and Asia.

Table **1** gives a summary of the water power resources of Canada and their development as at the beginning of 1961.

1.—Available and Developed Water Power, by Province, as at Jan. 1, 1961

Province or Territory	Available 24-Hour Power at 80 p.c. Efficiency		Turbine Installation[1]

Canada	**46,359,000[2]**	**66,203,000[2]**	**26,375,444**

[1] Includes water wheels and hydraulic turbines installed. [2] This figure reflects the effect of possible stream-flow regulation based on known storage potentials.

The figures given in the first and second columns of Table **1** represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop, or the head of possible concentration, has been measured or at least carefully estimated. Tabulations of potential power in Canada are not complete, as many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams throughout the country, particularly in the less explored northern districts. Apart from areas where definite studies have been carried out and the results recorded, no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient where economic heads may possibly be created by the construction of dams. Furthermore, the estimates of power available in different provinces do not include the power potential of major river diversions which have been investigated but not developed. Thus, in Table **1**, the figures of available power under the two conditions of stream flow represent only the minimum water power possibilities of Canada.

The figures in the third column of Table **1** give the total capacity of the water wheels actually installed and should not be placed in direct comparison with those in the first and second columns to deduce the percentage of the available water power resources developed. While the maximum economic turbine installation at any site can be determined only by careful consideration of all conditions and circumstances pertinent to its individual development, it is usual practice to install turbines that have a total capacity in excess of the power equivalent of the six-months flow at the site.

The consistent growth of hydraulic turbine capacity is shown in Table **2**. The average annual increase of 56,000 hp. from 1900 to 1905 was stepped up sharply in subsequent years because of improvements in the transmission of electricity and the building of large generating stations. During the period 1906-22, development proceeded at the fairly uniform rate of 150,000 hp. per annum but the rate of installation increased sharply in

1923 and continued at about 377,000 hp. each year from 1923 to 1935. As an aftermath of the economic depression, the rate of installation was low during the years 1936-39 but increased to an average of 481,000 hp. per annum during the period 1940-43 to satisfy war requirements. Few developments were undertaken in the later war years or in the immediate postwar period so that only a small amount of new capacity came into operation in the 1944-47 period. However, the effects of the later postwar program of construction are apparent in the large growth during the years 1948-60, when the average rate was over 1,200,000 hp. per annum. Although estimates indicate only a moderate increase in installed capacity for 1961, present programs of expansion point to a rapid rate of growth for subsequent years.

2.—Hydraulic Turbine Horsepower Installed, by Province, as at Dec. 31, Decennially 1900-50 and Annually 1951-60

Note.—Figures for the years 1900–30 are given in the 1939 Year Book, p. 362; for 1931–39 in the 1946 edition, p. 362; and for 1940–49 in the 1954 edition, pp. 556–557.

The availability of large amounts of hydro-electric energy has greatly fostered the economical utilization of the natural products from land, forest and mine. Low-cost power is fundamental in meeting the enormous requirements of Canada's great pulp and paper and smelting and refining industries. Indeed, Canada's outstanding industrial growth in the postwar period has been made in conjunction with accelerated development of water power resources. From hydro-electric plants ranging in capacity from a few hundred to more than 1,000,000 hp., networks of transmission lines carry power to most urban centres and to an increasing number of rural districts. This wide distribution of power has facilitated the decentralization of industry, permitting the carrying on of manufacturing processes in many of the smaller centres of population. Low-cost domestic electrical service also contributes in no small measure to the high standard of living in Canada.

Table **3** indicates the respective amounts of water power that have been developed by utilities and by industrial establishments. For this tabulation, utilities are defined as companies, municipalities or individuals who sell most of the power they develop. In some instances they include also certain subsidiary companies whose main purpose is to develop and sell power to a parent company for industrial purposes. The total of 20,354,543 hp. of turbine capacity installed in plants operated by utilities represents 77 p.c. of Canada's total installed capacity at Dec. 31, 1960.

Industrial establishments are defined as companies or individuals developing power mainly for their own use. Total installed capacity in plants operated by industrial establishments amounted to 6,020,901 hp. at Dec. 31, 1960. In addition, industry purchased a considerable amount of electricity from utilities.

The figure of total hydraulic installation in Canada (26,375,444 hp.) is the cumulative total of all existing installations of water wheels and hydraulic turbines irrespective of whether or not the equipment has been in use during the year. It has been adjusted to Dec. 31, 1960 by the inclusion of new installations completed during the year and by deletions of old units that were dismantled.

3.—Installed Water Power Capacity, by Province, as at Dec. 31, 1960

[1] Includes only hydro-electric installations that develop power mainly for sale. [2] Includes only water power installations developed by industries mainly for their own use. [3] Includes installed capacity of all water wheels and hydraulic turbines.

Section 2.—Thermal Power[*]

Thermal electric power capacity has expanded at a phenomenal rate since World War II. The ratio of generating capacity in thermal and hydro stations has sharply narrowed from about 1:15 in 1945 to 1:5 in 1959.

The accelerating trend toward thermal power developed significantly within the years 1950-59, particularly in the Atlantic and Prairie Provinces and in British Columbia. While Quebec, Ontario and the Northwest Territories depend less on thermally generated power than the remainder of Canada, these regions too will eventually have need for such power.

---

[*] Revised in the Transportation and Public Utilities Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

This trend has been brought about by a number of factors, mainly of economic expediency. Canada's rapidly expanding economy demands ever-increasing supplies of electric energy to serve a growing population and industrial complex. Supplies of hydraulic energy within economic transmission distance of populated areas are becoming fewer and more costly to develop. Expenditure of large amounts of capital required to develop single blocks of hydro power at distant points cannot be justified unless there is immediate use for all of the power generated at a load factor which warrants its transmission over long distances. Moreover, the load on the established electrical systems in many areas now needs firming with extra supplies of reliable thermal energy not heretofore required, and this can be provided at lower capital cost per unit of installed capacity than by hydro facilities which may be affected by periodic water shortages.

The trend is well exemplified by reference to the vast complex of The Hydro-Electric Power Commission of Ontario, one of the world's largest single power operations. At the end of 1960 this system had generating resources of 5,906,950 kw. of which only 995,900 kw. were installed in thermal stations. Additional steam capacity under construction amounted to 1,800,000 kw. with forecast of about 3,000,000 kw. to meet requirements by 1970. The Commission's long-term forecast estimates that, if nuclear electricity is not available at competitive cost by 1980, 26,500,000 tons of coal annually, at a cost of some $300,000,000, will be required to fuel its steam capacity which by 1980 may amount to 10,000,000 kw. or twice the available generating facilities available from hydraulic sources.

The report of the seventh survey of capability and load shows that from 1950 to 1960 the net generating capability of thermal stations increased by 385 p.c., as compared with 115 p.c. for hydro stations, with a forecast that by the end of 1963 thermal station net generating capability will have advanced over 1950 by 653 p.c. as against 128 p.c. for hydro stations.

Table 4 gives, by province, the estimated amount of increase in net generating capability and the percentage annual increment in thermal and hydro facilities for the period 1950-63. These data clearly indicate the growing importance of thermal generating capacity in comparison with hydro, and that, proportionately, the rate of growth is higher than for hydro in all provinces.

4.—Estimated Increase in Net Generating Capability, by Province, for the Period 1950-63

Province or Territory	Increase in Thermal Facilities		Increase in Hydro Facilities

[1] Combined thermal and hydro generating capacity.

Table 6 gives the maximum size of steam-driven turbo-generator units in thermal stations and shows clearly the trend toward the installation of larger and more efficient generating facilities capable of producing lower cost electric energy from the mineral fuels—coal, oil and natural gas.

6.—Maximum Size of Turbo-Generator Units in Thermal Central Stations, 1945, 1950 and 1955-61

Source: Prepared by the Fuels Division, Department of Mines and Technical Surveys, Ottawa.

Year	Eastern Canada		Central Canada		Western Canada	
	Megawatt Capacity	Units	Megawatt Capacity	Units	Megawatt Capacity	Units
		No.		No.		No.
1945	12.5	1	—	—	15	4
1950	15	1	6	1	30	1
1955	25	1	100	4	30	3
1956	25	1	100	4	66	1
1957	50	1	100	4	66	1
1958	50	1	100	4	66	2
1959	50	2	200	2	66	2
1960	50	2	200	4	150	1
1961	50	3	300	1	150	3

Heretofore, a fair proportion of the thermal generating capacity was operated at extremely low rates of load factor, particularly in small stations serving isolated communities and as standby to hydro facilities. However, progressive increase in load and need for firmer output is making it economical to install larger and more efficient thermal units, essentially in the larger stations serving widespread system demands. Here, the capacity is provided mainly by steam-motivated turbo-alternators, the largest of which are capable of generating a kilowatt-hour with as little as two-thirds of a pound of coal. From 1954 to 1959, 16 gas-turbine-driven generating sets with capacities of from 8,400 to 30,000 kw. were installed in Western Canada. These sets have the advantage of low first cost and extreme flexibility, and are well suited for peaking operations in an integrated system.

Section 3.—Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold, and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy which they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back only to 1956. Earlier reports, entitled "Central Electric Stations", were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

The figures of total water and thermal power generated for the years 1943-55 shown in Table 7 are compiled on the old basis, figures for 1956 are shown on both bases for comparative purposes, and those for later years are on the new basis.

7.—Electric Energy Generated, by Type of Station 1943-59, and by Province 1958 and 1959

[1] New series, see immediately preceding text.

Of the total generation in 1959 of 104,613,564,000 kwh., 92.8 p.c. was produced from water power and 7.2 p.c. was generated thermally; the proportions differed somewhat among provinces as shown in the following statement.

Province	*Hydro*	*Thermal*	*Province or Territory*	*Hydro*	*Thermal*
	p.c.	p.c.		p.c.	p.c.
Newfoundland	94.6	5.4	Manitoba	98.3	1.7
Prince Edward Island	0.5	99.5	Saskatchewan	28.0	72.0
Nova Scotia	41.2	58.8	Alberta	27.2	72.8
New Brunswick	61.5	38.5	British Columbia	94.6	5.4
Quebec	99.5	0.5	Yukon and N.W.T.	83.4	16.6
Ontario	97.0	3.0			

Table **8** gives summary figures of power production and distribution classified by province and Tables **9** and **10** give figures classified by type of production establishment. Total installed capacity in Canada amounted to 21,108,920 kw. in 1959, an increase of 2,439,502 kw. over 1958. Of the 1959 total, 16,937,290 kw. were accounted for by utilities and the remainder by industrial establishments. During 1958 and 1959 total sales to ultimate customers amounted to 65,323,721,000 kwh. and 71,888,110,000 kwh., respectively, of which 99.7 p.c. was sold each year by utilities.

Sales to power customers made up 61.6 p.c. of the total in 1958 and 61.5 p.c. in 1959, sales to domestic and farm customers were 26.5 p.c. and 26.4 p.c., and commercial sales 11.1 p.c. and 11.2 p.c. in the respective years. Exports to the United States in 1959 amounted to 4,580,619,000 kwh. compared with 4,074,513,000 kwh. in 1958.

Average domestic and farm consumption rose from 4,128 kwh. in 1958 to 4,338 kwh. in 1959. Among the provinces the averages in 1959 varied from a low of 1,617 kwh. in Prince Edward Island to a high of 5,993 kwh. in Manitoba. For domestic and farm customers the average annual bill was $69.76 in 1959 as against $66.49 in 1958, an increase of 4.9 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from 3,686 kwh. per customer in 1958 to 4,086 kwh. in 1959 and the average bill from $86.46 to $93.05.

Section 4.—Water and Thermal Power Developments in the Provinces and Territories, 1960

The total of 1,741,820 hp. of new hydro-electric capacity installed during 1960, while falling short of the capacity installed in each of the preceding two years, nevertheless represented a significant addition to Canada's total installed hydro-electric capacity. Construction under way at the year-end was expected to yield about 243,000 hp. of new capacity in 1961 and an additional 4,500,000 hp. within the following few years. Provision was being made for a further 1,000,000 hp. as required in subsequent years. Progress in hydro-electric and thermal-electric construction during 1960 is outlined below, by province.

Atlantic Provinces.—In Labrador, the Iron Ore Company of Canada doubled the capacity of its Menihek Rapids development on the Ashuanipi River by the addition of a 12,000-hp. unit. The Hamilton Falls Power Corporation continued construction of its Twin Falls development on the Unknown River where an initial installation comprising two units of 60,000 hp. each is scheduled for completion by mid-1962. Ultimate development of this site is expected to reach 300,000 hp. On the Island of Newfoundland, the United Towns Electric Company Limited installed a 3,200-hp. unit at its Heart's Content development on Heart's Content Brook, to replace two smaller units totalling 1,500 kw. which were dismantled. Two other hydro-electric developments were in the planning stage. One of these, to be constructed by the Southern Newfoundland Power and Development Limited on the Salmon River at the head of Bay d'Espoir, will have an initial installation of two units of 38,500 hp. each, and an ultimate development of up to 350,000 hp.; the other, to be constructed by the Bowater Power Company Limited on Hinds Brook, will have an installed capacity of 54,000 hp. In the field of thermal-electric generation, Tilt Cove Power Corporation completed the installation of a 5,000-kw. unit at its Tilt Cove steam plant and construction was under way for completion in 1961 of two units of 2,100 kw. each at the Atlantic Coast Copper Company Limited steam plant at Little Bay. Newfoundland Power Commission completed construction of two small diesel plants, one with a 200-kw. capacity in one unit at Happy Valley in Labrador, and the other with a total capacity of 90 kw. in three units at Trepassy. Newfoundland Light and Power Company Limited completed installation of two small diesel plants of 100 kw. each at Badger and at Baie Verte.

In Prince Edward Island, the Maritime Electric Company added a 10,000-kw. unit at its Charlottetown steam plant.

In Nova Scotia, the Nova Scotia Power Commission continued the construction of two single-unit hydro-electric developments on the Sissiboo River. One of these, with a turbine capacity of 12,000 hp., is located at Weymouth Falls and the other, with a capacity of 8,000 hp., at Sissiboo Falls. Construction difficulties delayed the completion of these two developments, originally planned for 1960, until 1961. The Commission is giving active consideration to the construction of a 10,800-hp. development at Riverdale, also on the Sissiboo River, and a 90,000-hp. development on Wreck Cove Brook. The date of completion of the Nova Scotia Light and Power Company's 7,500-hp. development on the Allain (Lequille) River at Lequille has been moved forward to 1963, as the benefits of a power system interconnection in Nova Scotia and New Brunswick have made completion of this project less urgent. The Company is giving active consideration to a 6,500-hp. development on the Nictaux River at Alpina. In the thermal-electric field, a 20,000-kw. unit was installed at the Nova Scotia Power Commission's steam plant at Trenton.

In New Brunswick, the only activity in the field of hydro-electric construction involved a development on the Monquart River near Bath, which, on completion in 1961, is expected to yield 600 kw. in two units. Construction was continued on the New Brunswick Electric Power Commission's steam plant at East Saint John, where an initial installation of one 50,000-kw. unit is scheduled for completion in mid-1961. Ultimate installation at this plant is expected to reach 250,000 kw.

Quebec.—The total amount of new hydro-electric capacity installed in the province during 1960 surpassed the combined total for all the other provinces. Of Quebec's total of 1,176,500 hp. of new capacity, the Quebec Hydro-Electric Commission contributed more than half. The Commission completed its 855,000-hp. Bersimis II development by installing the last two of a total of five units, each rated at 171,000 hp. The third and last section of the Commission's Beauharnois development was brought nearer completion with the installation of five more 73,700-hp. units. By 1961, this section will consist of ten 73,700-hp. units, with provision for an eleventh. Installation of the eleventh and final unit will raise the installed capacity of the entire Beauharnois development to 2,234,700 hp. Construction of the Commission's Carillon development on the Ottawa River continued on schedule. Ultimate installed capacity at this site will be 840,000 hp. in fourteen units of 60,000 hp. each, the first of which is due to be installed in the fall of 1962 and the remaining units during the 1962-65 period. First details of a major power scheme for the Manicouagan region were announced by the Commission in 1960. This scheme, which will involve the harnessing of the headwaters of the Manicouagan and Outardes Rivers, is expected to provide nearly 6,000,000 hp. of new capacity at new and existing developments on the two rivers. Construction of an 80-mile road to provide access to the site of the proposed reservoir was completed during 1960, and the work of clearing areas to be flooded was commenced. Main features of the Manicouagan scheme will include three generating stations on the Manicouagan River and two others on the Outardes River. An important engineering feature will be a buttressed, multi-arch, concrete dam 4,000 feet long and 650 feet high, one of the highest and most massive of its kind in the world.

The Aluminum Company of Canada completed its giant 1,000,000-hp. Chute des Passes development on the Peribonca River with the installation of the last two units, each rated at 200,000 hp. The Quebec Cartier Mining Company completed its power project on the Hart Jaune River, in the headwaters of the Manicouagan River. The powerhouse, which is operated by remote control, contains three units, each rated at 22,000 hp. L'Office de l'Electrification Rurale started construction of a hydro-electric plant at the mouth of the Magpie River near Magpie Village. The development, consisting of two 1,500-hp. turbines, was scheduled for service in the spring of 1961.

In the field of thermal-electric generation, the Quebec Hydro-Electric Commission completed installation of a 36,000-kw. gas turbine plant near the village of Les Boules, in the Gaspe region of Quebec.

Ontario.—During 1960, the total of 26,500 hp. of new hydro-electric capacity placed in service in Ontario was installed by The Hydro-Electric Power Commission of Ontario, Canada's largest power producing and distributing agency. The new capacity, consisting of a single hydro-electric unit, was brought into operation at Red Rock Falls on the

Mississagi River; a second and final unit is scheduled for service early in 1961. Operation of the plant is controlled from the George W. Rayner station, located 15 miles upstream. Construction progressed rapidly at the Otter Rapids development on the Abitibi River, where two 60,000-hp. units are expected to be installed in the autumn of 1961 and two others in 1963, with provision for four additional units at a later stage. Early in 1960, the Commission announced plans to proceed with construction of three generating stations on the Mattagami River. The first of these, Little Long Generating Station, will consist of two 84,000-hp. units, with provision made for the later addition of two similar units. Initial operation is tentatively scheduled for 1963. At the second, Harmon Generating Station, the initial installation of three 63,000-hp. units is planned for 1965, with provision for the later addition of three units. The third, Kipling Generating Station, will have three 63,000-hp. units in service in 1966, and provision for an ultimate addition of four more units. These three stations, in common with the Otter Rapids Generating Station, will be controlled from the Pinard Transformer Station to be built near the Abitibi River at a point some 23 miles upstream from Otter Rapids.

The Commission proposes to co-ordinate the development of these hydraulic resources with the construction of thermal-electric generating facilities in areas of concentrated load. The plan is to channel the output of a number of the hydraulic developments to a terminal station in the north and thence to load centres in southern parts of the province by means of extra-high-voltage transmission lines, using voltages more than double those at present employed by the Commission. With this purpose in mind, the Commission is conducting tests on an experimental high-voltage line in the vicinity of Coldwater, where conditions associated with the transmission of power at voltages from 400 to 600 kv. are being simulated.

The construction of thermal-electric stations in Ontario was energetically continued. At the Richard L. Hearn Generating Station in Toronto, the Commission installed two steam turbines of 200,000 kw. each. With the placing in service of the final 200,000-kw. unit in 1961, the ultimate installed capacity of 1,200,000 kw. will have been reached. Construction was well advanced on the Lakeview Generating Station near Toronto. One 300,000-kw. unit is scheduled for service in 1961, and three other similar units by 1964. The site of this station is planned to permit a total installation of 1,800,000 kw. At Fort William, construction continued on a steam turbine plant to consist of one 100,000-kw. unit, planned for operation in the latter part of 1961. The site will permit the installation of additional units, if required, to an ultimate capacity of 1,000,000 kw.

The Commission, in conjunction with Atomic Energy of Canada Limited and the Canadian General Electric Company Limited, had under construction, for completion in 1961, a 26,800-hp. Nuclear Power Demonstration Plant near Des Joachims Generating Station on the Ontario side of the Ottawa River. In addition, the Commission entered into an agreement with Atomic Energy of Canada Limited covering participation by both organizations in the development of a 268,000-hp. nuclear-electric generating station, to be located at Douglas Point on Lake Huron, between Kincardine and Port Elgin. Construction work on this project was started, the completion date being planned for 1964 or early in 1965. According to the terms of the agreement, when the Douglas Point station has been demonstrated to be a satisfactory source of power, it will be purchased by the Commission at a price which will permit the production of energy at costs that are competitive with the costs of energy from modern coal-fired stations of similar size.

Prairie Provinces.—In Manitoba, the Manitoba Hydro-Electric Board completed the initial phase of its Kelsey Generating Station on the Nelson River at Grand Rapids with the installation of five units, each rated at 42,000 hp. Provision has been made for the addition of a sixth unit when required. Power from the Kelsey Station will be supplied to the mining project of The International Nickel Company in the Moak, Mystery, and Thompson Lakes area of northern Manitoba. The Board commenced construction of a hydro-electric development on the Saskatchewan River at Grand Rapids, on the west shore of Lake Winnipeg. Initial installation will consist of three 150,000-hp. units; two are scheduled for service late in 1964 and the third is planned for 1965. Construction of the Board's Selkirk Generating Station neared completion; the first of two 66,000-kw. steam units was installed in August and the second should be in operation early in 1961. Transmission and terminal facilities, under construction or proposed for construction, will permit power from developments in the northern parts of the province to be fed into networks serving the southern areas and will also facilitate the existing interconnection between the Provinces of Manitoba and Saskatchewan.

In Saskatchewan, the Consolidated Mining and Smelting Company of Canada doubled the capacity of its Wellington Lake plant on the Charlot River by installing a unit rated at 3,300 hp. Eldorado Mining and Refining Limited proceeded with construction of a single-unit 10,000-hp. hydro-electric development on the Charlot River at Waterloo Lake. The Prairie Farm Rehabilitation Administration continued construction of the South Saskatchewan River Project at the Coteau Creek site. Although the works are being constructed primarily for irrigation purposes, hydro-electric generating facilities will be incorporated at the dam by the Saskatchewan Power Corporation. The initial installation will consist of three units of about 60,000 hp. each, with provision for the later addition of two similar units. The project is scheduled for completion in 1966. The Corporation continued construction of a development in the Tobin Rapids–Squaw Rapids reach of the Saskatchewan River, 35 miles northeast of Nipawin. The development will consist of six units, each rated at 46,000 hp.; installation of four units is planned for 1963 and the remaining two by 1964. A steam unit, rated at 66,000 kw., was added at the Corporation's Boundary Dam plant, raising capacity to 132,000 kw. in two units. The Corporation purchased and took over operation of the 37,500-kw. Moose Jaw plant, formerly owned by the National Light and Power Company, and closed down a number of small plants at Kamsack, Hudson Bay Junction and Weyburn.

In Alberta, Calgary Power Limited completed extensions to its Spray and Rundle plants. Capacity of the Spray plant was doubled by the addition of a 62,000-hp. unit, and capacity of the Rundle plant was increased to 63,000 hp. by the addition of a 40,000-hp. unit. Construction continued on the Company's hydro-electric development on the Brazeau River at Big Bend, about 15 miles upstream from the confluence with the North Saskatchewan River. Installation of a 200,000-hp. unit is scheduled for the autumn of 1964. In addition to a reconnaissance survey being conducted in the Upper Brazeau River basin with a view to locating suitable sites for storage or power dams, Calgary Power Limited is carrying out investigations for a hydro-electric development on the Saskatchewan River at Brazeau Forks, below the confluence with the Brazeau River.

In the thermal-electric field, Calgary Power Limited began installation of a 150,000-kw. steam turbine at its Wabamun plant. Installation of this unit will bring the total capacity of the plant to 282,000 kw. The City of Edmonton increased the capacity of its municipally owned plant to 255,000 kw. in eight units by the addition of a 75,000-kw. steam turbine. The City of Lethbridge added a 10,000-kw. gas turbine at its municipally owned plant, bringing the total installed capacity to 33,375 kw. in five units. Northland Utilities installed a 3,000-kw. gas diesel unit in its Fairview plant, and Canadian Sugar Factories Limited raised the capacity of its Taber steam plant to 3,675 kw. by the addition of a 1,675-kw. unit.

British Columbia.—Hydro-electric construction was active in British Columbia during 1960. A total of 201,220 hp. of new capacity was added, the major part of it by the British Columbia Electric Company Limited, which completed the final phase of its Bridge River development by installing the last two of four identical units, each of 82,000 hp., at its Bridge River No. 2 Powerhouse. The increase in head brought about by completion of the Mission Dam, constructed in conjunction with the No. 2 development, had the effect of raising the total turbine capacity of the Bridge River No. 1 plant from 248,000 hp. to 276,000 hp. The City of Revelstoke completed the initial phase of a hydro-electric development on Cranberry Creek, about 15 miles south of Revelstoke. One unit, rated at 5,800 hp., was installed during the year and a similar unit will be added when required. The Northern British Columbia Power Company Limited doubled the capacity of its Falls River station by the installation of a 6,000-hp. turbine. Bralorne Pioneer Mines Limited reported the loss by fire of two hydro-electric plants located on the Hurley River; capacity of both plants was 2,580 hp. The British Columbia Power Commission had two hydro-electric developments in the planning stage—a 51,500-hp. installation on the Kokish River on Vancouver Island and the Pyramid Mountain–Murtle River development with an expected ultimate capacity of 172,000 hp. in four units. The Commission also had under study a small development of 1,000 hp. on Clayton Creek near Bella Coola.

Negotiations between Canada and the United States led, early in 1961, to the signing of a treaty relating to the development of the Columbia River in Canada. Ratification of the treaty would permit the commencement of work on the development of storage in Canada for the benefit of plants in the United States. Under the terms of the agreement, Canada would receive one-half of the power benefits accruing to the United States from the regulation of 15,500,000 acre-feet of storage, and one-half of the value of the estimated flood damage prevented in the United States through flood control operation of these projects. It is estimated that Canada's initial share of the power benefits will approximate 6,750,000,000 kwh. of annual energy from 1,300,000 kw. of dependable capacity.

In the field of thermal power generation, the British Columbia Electric Company continued construction of a large steam plant designed for an ultimate capacity of six units, each rated at 150,000 kw. The first unit is scheduled for operation early in 1962, the second in 1963, and the third and fourth in the period 1964-66. The fifth and sixth units will be installed when required. British Columbia Power Commission completed installation of a number of new tri-fuel internal combustion units, each rated at 3,000 kw. One of these was installed at the Commission's plant at Dawson Creek, two at Quesnel and three at Prince George; another is expected to be added at Prince George in 1961. Other capacities brought into service at Commission plants during 1960 included 1,100 kw. at Port Hardy, 800 kw. at Burns Lake, 2,100 kw. at Fort Nelson, and 385 kw. at Valemount. A 100-kw. unit was dismantled at Burns Lake. Installations planned for 1961 include 250 kw. at Hazelton, 800 kw. at Chetwynd, 1,200 kw. at Sandspit, and 200 kw. at Bamfield. The Northern Canada Power Commission installed a 100-kw. unit at its diesel plant at Field.

Northwest Territories and Yukon Territory.—The Northern Canada Power Commission completed the installation of a single-unit 9,200-hp. development on the Snare River at Snare Falls, with provision made for the addition of a similar unit when required.

During the year, two diesel generating units with a total capacity of approximately 2,000 kw. were installed at Frobisher Bay. A single 1,000-kw. diesel unit was added at Inuvik and a similar unit at Fort Smith following which two units of 100 kw. and 150 kw., respectively, were removed from service. At Fort Simpson, a 300-kw. unit was installed replacing a smaller unit of 75 kw. The redundant units removed from Fort Smith and Fort Simpson were transferred to Fort Resolution and the three units with a total capacity of 325 kw. are expected to be in operation early in 1961. The installation of a 150-kw. diesel unit at Fort McPherson was completed by the end of 1960.

Section 5.—Ownership and Regulation of Electrical Utilities*

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 9, p. 576, giving statistics by type of establishment, shows that 51 p.c. of the total electric power generated in 1959 was produced by publicly operated utilities, 28 p.c. by privately operated utilities and 21 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output, for instance, is predominantly from privately owned plants since a large portion of the power development in that province is connected with pulp and paper establishments and with the aluminum industry. In Ontario, on the other hand, almost all electric power is produced by a publicly owned utility, The Hydro-Electric Power Commission of Ontario.

---

* Revised by the various provincial commissions or authorities concerned.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies of the provincial electric power commissions, their functions and activities are summarized in the following paragraphs. Certain privately owned utilities are also covered.

Newfoundland.—There are no publicly owned hydro-electric systems in Newfoundland, although a Commission, known as the Newfoundland Power Commission, was established in 1954 for the purpose of supplying electric power wherever needed throughout the province, particularly to rural areas. The largest water power development in the province is located at Deer Lake. The plant, which is operated by Bowater's Newfoundland Pulp and Paper Company Limited, has a total capacity of 154,000 hp. This Company develops hydro-electric energy at Deer Lake mainly for its own use in the manufacture of pulp and paper, and also supplies electric power to the Buchans Mining Company for mining operations and to the Newfoundland Light and Power Company Limited which distributes electricity to consumers in Corner Brook and adjacent communities in the Bay of Islands sections, to the towns of Grand Falls, Windsor, Bishop's Falls, Botwood and Lewisporte, and to the International Airport at Gander and the Township of Gander nearby. The Company, in addition to its eight hydro plants, operates two steam generating plants at St. John's, having a total capacity of 30,000 kw.

The United Towns Electric Company Limited operates nine hydro plants and two diesel plants, the latter located on the Burin Peninsula. A subsidiary, the West Coast Power Company, operates a diesel generator at Port aux Basques and a hydro plant at Lookout Brook. The Union Electric Light and Power Company operates plants at Clarenville, Port Union and Trinity.

Power plant construction completed or under way in Newfoundland during 1960 is outlined at p. 578.

Prince Edward Island.—The area of Prince Edward Island is only 2,184 sq. miles and approximately 70 p.c. of its population lives in rural areas. Consequently, electric power must be supplied to rather thickly populated rural districts interspersed with a considerable number of small municipalities. There is little opportunity for the development of hydro-electric power in the province, since rivers are short, drainage areas small, and the country is relatively flat. Therefore, power is generated mainly in thermal and diesel plants using imported fuels.

The Maritime Electric Company Limited supplies 65,631,420 kwh. of the Island's power consumption of 71,439,038 kwh. with a system peak of 15,700 kw. from its Charlottetown plant. The plant consists of six steam turbines of 22,365-kw. capacity. In 1959, the Company served 12,857 rural and urban customers over approximately 850 miles of Company-owned distribution line, with an additional 3,378 customers being served over 714 miles of distribution line owned by the provincial government and connected with the Company system. In addition, the Company supplies 6,175,783 kwh. of energy annually to the Town of Summerside Electric Light Department through a 33-kv. transmission line interconnecting the two systems at Summerside.

Two other power systems supply the remainder of the power consumed in the province. The Town of Summerside Electric Light Department operates a station in Summerside which is powered by nine diesel engines with a total capacity of 2,835 kw. and has an annual energy production of 5,415,960 kwh. This system serves 2,324 customers within the corporate limits of the town and 925 customers over 76 miles of rural lines, plus an additional 325 rural customers over 66 miles of line owned by the provincial government. The Summerside station also supplies 918,600 kwh. of energy annually to the Scales Hydro-Electric Company Limited. The Scales Hydro-Electric Company Limited operates a small station in Freetown on the Dunk River. Its total capacity is 250 kw., 175 kw. of which is generated by water power and the remainder by diesel engines. The annual energy production is 391,658 kwh., and 727 customers in surrounding areas are served by 29 miles of distribution line.

Nova Scotia.—The Nova Scotia Power Commission was created under the Power Commission Act of 1919 with the function of supplying electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing financial assistance to equalize cost and revenue of extensions approved by the Governor in Council. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the province. Certain investigatory work is carried on in the province by the Federal Government in close association with the Commission, but the control of water resources is vested in the Crown and administered under the provisions of the Nova Scotia Water Act, 1919. The Commission pays regular fees for water rights.

Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1959 showed total fixed assets of $57,508,716 including work in progress amounting to $10,481,501. Current assets amounted to $1,037,495 and liabilities were as follows: fixed $42,224,276; current $4,154,261; contingency and renewal reserves $5,159,002; sinking fund reserves $9,351,697; and general and special reserves $2,122,738.

The initial development of the Commission was an 800-hp. installation on the Mushamush River which went into operation in 1921 and delivered 208,752 kwh. in the first complete year of operation. Succeeding years showed a marked growth in installed capacity, which at Nov. 30, 1959 reached 112,550 hp. in hydraulic turbines, 960 kw. in diesel units and 60,000 kw. in steam turbines.

The territory of the Commission extends over the entire province and embraces six systems which include 22 generating stations and more than 4,500 miles of transmission and distribution lines through which wholesale and retail customers received 539,321,786 kwh. during the year ended Nov. 30, 1959. Power plant construction completed or under way in Nova Scotia during 1960 is outlined at pp. 578-579.

13.—Capacity and Output of the Nova Scotia Power Commission, Year Ended Nov. 30, 1959

System[1] and First Year of Operation	Present Installed Capacity	Output
	kw.	kwh.
Western Network—		
Harmony (1943)	600	4,425,900
Roseway (1930)	888	3,949,805
Gulch (1952)	6,000	29,266,046
Ridge (1957)	4,000	12,088,800
Portable (diesel)	200	17,315
Eastern Network—		
Barrie Brook (1940)	360	2,718,600
Dickie Brook (1948)	3,800	10,102,400
Malay Falls (1924)	3,600	12,615,410
Ruth Falls (1925)	6,970	36,799,820
Liscomb (1957)	450	2,556,742

St. Margaret (1921)	10,400	32,037,200
Mersey—		
Original development (1928)	21,780	142,469,200
Cowie Falls (1938)	7,200	47,825,000
Deep Brook (1950)	9,000	54,331,800
Lower Great Brook (1955)	4,500	23,868,320
Canseau (diesel) (1937)	970	1,766,576
Tusket (1929)	2,160	15,577,578
Totals	**142,878**	**542,849,812**

[1] Hydro unless otherwise noted.

New Brunswick.—The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned by the Commission at Mar. 31, 1960 were as follows:—

Plant	*Type*	*Capacity*	*Plant*	*Type*	*Capacity*
		hp.			hp.
Grand Falls	Hydro	84,500	Saint John	Steam	21,500[1]
Musquash	Hydro	9,320	Chatham	Steam	43,600[1]
Tobique	Hydro	27,000	Grand Manan	Diesel	1,140[1]
Beechwood	Hydro	96,500	Campobello	Diesel	320[1]
Milltown	Hydro	3,600			
Grand Lake	Steam	58,700[1]	Total Capacity		346,180

---

[1] Capacity rating of generators in kw. converted to hp.

All the above generating units with the exception of Grand Manan were interconnected in a province-wide grid system. The statistical information given in Table **14** shows the growth of the Commission's undertakings since 1956.

14.—Growth of the New Brunswick Electric Power Commission, Years Ended Mar. 31, 1956-60

Item		1956	1957	1958	1959	1960
High-voltage transmission line	miles	1,071	1,121	1,228	1,272	1,396
Distribution line	"	6,937	7,100	7,168	7,286	7,512

Revenue	$	9,635,272	11,286,117	12,182,120	13,527,290	16,665,153

Power plant construction completed or under way in New Brunswick during 1960 is outlined at p. 579.

Quebec.—*The Quebec Streams Commission.*—Created by SQ 1910, c. 5, and given additional powers in 1912 (RSQ 1925, c. 46) and SQ 1930, c. 34, the Quebec Streams Commission was authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct and operate certain storage dams to regulate the flow of streams. It assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on meteorological conditions, by investigation of numerous water power sites and by the determination of the longitudinal profile of a large number of rivers.

On Apr. 1, 1955, the Quebec Streams Commission was abolished and its powers and attributions transferred to the provincial Hydraulic Resources Department. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable, and the Métis. The Commission also operated nine reservoirs on North River, two in the watershed of the Ste. Anne de Beaupré River, and one at the outlet of Lake Morin on Rivière du Loup (lower).

Other Reservoir Control.—Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; Témiscouata Lake on the Madawaska River, controlled by the Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by the Dominion Textile Company; Témiscamingue and Quinze Lakes on the Ottawa River, controlled by the federal Department of Public Works; Kipawa Lake on the Ottawa River, controlled by the Gatineau Power Company; and Dozois Lake on the upper Ottawa River and Pipmaukin Lake in the Bersimis River watershed, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, have a total capacity of 1,950,000 hp.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was established by SQ 1944, c. 22, with the object of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration. The Commission at the end of 1960 controlled, among other assets, the following hydro-electric plants:*—

Plant	*River*	*Installed Capacity*
		hp.
Cedars	St. Lawrence	217,000
Sault au Recollet	Rivière des Prairies	60,000
Beauharnois	St. Lawrence	1,957,000
Rapid VII	Upper Ottawa	64,000
Rapid II	Upper Ottawa	48,000
Bersimis No. 1	Bersimis	1,200,000
Bersimis No. 2	Bersimis	875,000
	TOTAL CAPACITY	4,421,000

The Commission operates a public utility system which supplies the electric light and power requirements of Metropolitan Montreal and surrounding districts, embracing a population of nearly 2,000,000. From the Cedars plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through the Beauharnois Light, Heat and Power Company power is sold to The Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of 100,000 hp. to Massena, N.Y., and 250,000 hp. to Ontario.

---

* The Commission also purchases 135,000 hp. from the Shawinigan Water and Power Company.

15.—Growth of the Quebec Hydro System, 1951-60

NOTE.—Figures for the years 1935-46 will be found in the 1950 Year Book, p. 572, and for the years 1947-50 in the 1957-58 edition, p. 579.

Year	Municipalities Served	Customers Served (end of year)	Power Distributed	
			Total	Primary
	No.	No.	hp.	hp.
1951	66	380,171	1,312,000	1,312,000
1952	67	395,066	1,620,000	1,462,000
1953	67	413,439	1,748,000	1,625,000
1954	67	430,774	1,700,000	1,687,000
1955	65	451,820	1,760,000	1,725,000
1956	65	475,499	2,061,000	1,955,000
1957	64	499,005	2,561,000	2,390,000
1958	64	521,279	2,736,000	2,671,000

The Commission delivers some 50,000 hp. on the south shore of the St. Lawrence River in the Gaspe area—power from its Bersimis plants transmitted across the river through a 69-kv. submarine cable, over a distance of 34 miles. The Commission also purchases about 25,000 hp. from the Saguenay Transmission Company for delivery to mining companies in the Chibougamau area. The recently completed Lac Ste. Anne reservoir on the Toulnustouc River controls the flow of the Lower Manicouagan River.

Power plant construction completed or under way in Quebec during 1960 is outlined at p. 579.

Ontario.—The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (RSO 1960, c. 300, as amended). The Commission may have from three to six members, all of whom are appointed by the Lieutenant-Governor in Council. One commissioner must be, and a second commissioner may be, a member of the Executive Council of the Province of Ontario.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power systems, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, over a period of nearly forty years the province has materially assisted the development of agriculture by contributing half the capital cost of rural distribution facilities.

For the financial and administrative purposes of the Commission, the province is divided into two parts. The roughly triangular part lying south of Lake Nipissing and the French and Mattawa Rivers is served by the Southern Ontario System, a fully integrated power system combining the Niagara, Georgian Bay, and Eastern Ontario Divisions. The System is operated on a co-operative basis predominantly for the benefit of more than 300 municipal electrical utilities supplied with power at cost but in part also for the benefit of the Rural Power District which it serves. The northern part of the province is served by the Northern Ontario Properties, held and operated for the most part in trust for the province, but operated in part also for the benefit of a group of utilities supplied with power at cost. The Northern Ontario Properties include a Northeastern and a Northwestern Division. Each of these two Divisions is an integrated power system, the former being interconnected with the Southern Ontario System.

In addition to administering the enterprise over which it has direct control, the Commission exercises certain regulatory functions with respect to the group of municipal electrical utilities which it serves. In order to provide convenient and expeditious service in this dual function of regulation and supply, the Commission has subdivided its province-wide operations into nine regions, seven in the south and two in the north, with regional offices located in nine major municipalities. At present the two northern regions coincide with the two northern divisions.

The Commission is concerned primarily with the provision of electric power by generation or purchase and its delivery in bulk either for resale or for use in the industrial operations of certain customers served directly. Power for resale is delivered to the associated municipal electrical utilities, and to certain interconnected systems, including a number of independent municipal distribution systems, operating within or beyond the provincial boundaries. The industrial customers served directly include mines and industries in unorganized areas. Some power users located within areas served by the municipal utilities are also served by the Commission since their power requirements may be so large, or may create supply conditions so unusual, as to make service by the local municipal utilities impracticable. In total, bulk delivery for resale and for industrial use accounts for about 90 p.c. of the Commission's energy sales. The remaining 10 p.c. of the Commission's sales are made to ultimate customers either in rural areas served on behalf of the townships by the Commission's rural distribution facilities, or in a relatively small group of municipalities served by Commission-owned local distribution systems. In general, however, retail service to ultimate customers in most cities and towns, in many villages, and in certain populous township areas is supplied by the associated electrical utilities, owned and operated by local commissions and functioning under the general supervision of The Hydro-Electric Power Commission of Ontario as provided for in the Power Commission Act and the Public Utilities Act.

The Commission's power development program as at Dec. 31, 1960 is given in Table 17. Hydro, thermal and nuclear power plant construction completed or under way in Ontario during 1960 is outlined at pp. 579-580.

17.—Current Power Development Program of The Hydro-Electric Power Commission of Ontario, as at Dec. 31, 1960

[1] Dependable peak capacity—the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

19.—Distribution of Power to Systems of The Hydro-Electric Power Commission of Ontario, Years Ended Dec. 31, 1955-60

NOTE.—Peak load generated and purchased, primary and secondary, in terms of generation.

1960	1,425p	1,881,472	6,157,534	3,044,800,819

[1] Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

During 1960, the Commission's investment in fixed assets at cost increased by $112,578,417 and at the end of the year amounted to $2,360,850,796. Total assets after deducting accumulated depreciation were $2,660,258,018.

In 1960, a total of 354 municipal utilities engaged in the retail distribution of electricity purchased power from the Commission under cost or fixed-rate contracts. The total assets of these utilities, after deducting accumulated depreciation, amounted to $645,644,451, of which $261,101,650 represented the equity acquired in the Commission's systems by the utilities operating under cost contracts.

Manitoba.—The Manitoba Power Commission came into being in 1919 by Act of the Provincial Legislature and was charged with the responsibility of distributing electric energy to most of the province with the exception of the Metropolitan Winnipeg area. The distribution facilities of the suburban areas adjacent to the city of Winnipeg proper were acquired in 1955. The Commission acted as a distributing agency only, purchasing energy in bulk from The Manitoba Hydro-Electric Board. It served 532 cities, towns and villages and more than 42,500 farms through its 32,000 miles of transmission line. In 1958, the Commission moved into the northern section of the province by acquiring the distribution and generating facilities at The Pas. This northern expansion continued during 1959 and 1960 with Cranberry Portage, Thompson and the seaport of Churchill added to the group of communities served. By a special Act of the Legislature passed in March 1961, The Manitoba Power Commission was amalgamated with the provincial generation authority, The Manitoba Hydro-Electric Board, to form one new utility known as Manitoba Hydro.

Plant additions completed or under way in Manitoba during 1960 are outlined at pp. 580-581.

Saskatchewan.—The Saskatchewan Power Corporation was established on Feb. 1, 1949 and now operates under the provisions of the Power Corporation Act (SS 1950, c. 10) as amended. It succeeded the Saskatchewan Power Commission which had operated from Feb. 11, 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase, and to transmit, distribute, sell and supply natural or manufactured gas.

In 1959, the Corporation served 957 urban communities (with six or more customers) in retail sales, and served the cities of Saskatoon, Swift Current and Weyburn, the town of Battleford and the hamlet of Waskesiu in bulk sales. Some bulk power was also sold to the city of Regina on an exchange basis. Activities of the Corporation cover the entire province with the exception of the city of Regina, which owns and operates municipal plants and a distribution system, and the city of Moose Jaw where the local plant and distribution system is owned and operated by National Light and Power Company Limited. Late in 1959, the distribution system and generating facilities of the city of Weyburn were purchased and added to the Corporation system.

At the end of 1959, the Corporation served 197,451 customers, 162,443 of whom were retail customers and 35,008 of whom were located in communities supplied with power through bulk sales. The retail customers included 107,322 urban customers, and 55,121 customers classified as rural, predominantly farmers. During the year, all customers used 1,067,349,615 kwh., of which 1,048,261,376 kwh. were generated in Corporation plants and 19,088,239 kwh. were bought in bulk from Regina, the National Light and Power Company Limited, and the Northern Power Company. At the end of the year, the Saskatchewan Power Corporation had invested at cost a total of $269,175,839 in electric and natural gas plant in service.

During 1959, the Corporation owned and operated five steam generating plants, one at Prince Albert and two each at Saskatoon and Estevan. These plants supplied 82 p.c. of total system power requirements. Three internal combustion gas and dual fuel plants at Kindersley, Swift Current and Unity supplied most of the remainder. Five small diesel plants (at Leader, Central Butte, Kamsack, Hudson Bay and La Ronge) acted mainly as standby plants. Total system capability in operation at the end of 1959 was assessed at 447,110 kw. with 398,000 kw. located in steam plants, 46,000 kw. in gas and dual fuel units and 3,110 kw. in diesel plants.

By the end of 1959, the Corporation owned and operated 63,514 miles of transmission and rural lines (excluding urban distribution and hi-lines).

Plant additions completed or under way in Saskatchewan during 1960 are outlined at p. 581.

21.—Growth of the Saskatchewan Power Corporation, 1950-59

Year	Communities Served in Bulk and Retail Sales	Individual Meters in Communities Served	Power Distributed	Revenue
	No.	No.	kwh.	$

1959	962	197,451	1,067,349,615	23,909,113

Alberta.—Public ownership of power generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

There are three private utility services in the province—Calgary Power Limited, Canadian Utilities Limited, and Northland Utilities Limited. A synopsis of these services is given below; plant additions completed or under way in Alberta during 1960 are outlined at p. 581.

Calgary Power Limited.—This Company has 11 hydro generating plants on the Bow River and its tributaries, west of Calgary: Horseshoe Falls, Kananaskis Falls, Ghost River, Cascade, Barrier, Spray, Rundle, Three Sisters, Bearspaw, Pocaterra, and Interlakes. The Company also operates a steam plant of 176,000 hp. at Wabamun, west of Edmonton. At Dec. 31, 1960, the Company's total plant capacity was 587,450 hp. All the hydro plants except Bearspaw are operated by remote control from the Kananaskis Falls plant.

The Company has five reservoirs on the Bow River and its tributaries:—

Lake Minnewanka	180,000 acre-feet
Interlakes (Upper Kananaskis Lake)	100,000 acre-feet
Pocaterra (Lower Kananaskis Lake)	53,000 acre-feet
Spray Lakes	210,000 acre-feet
Ghost	75,000 acre-feet

An agreement with the City of Medicine Hat provides an additional 33,500 hp. to the Company from the city's steam plant. Power from these plants is fed into a transmission network which supplies the entire electricity requirements of the cities of Calgary, Red Deer, Wetaskiwin and Camrose, about 450 towns, villages and hamlets, and a substantial industrial load in central and southern Alberta. This transmission network is also connected with the municipal utilities of the cities of Edmonton and Lethbridge, Canadian Utilities Limited at Drumheller, Vegreville and Vermilion, and the East Kootenay Power Company in the Crowsnest Pass.

The Company has about 5,001 miles of main transmission lines and 3,522 miles of distribution lines extending from Judy Creek and Plamondon in the north to Milk River and Waterton in the south, and from Chauvin, Macklin (Sask.), Hilda and Walsh in the east to Hinton, Nordegg, Banff and Crowsnest Pass in the west. The cities of Calgary and Red Deer and the towns of Ponoka, Fort Macleod and Cardston are supplied on a wholesale basis, but all other points on the same system are supplied on a retail basis. At Dec. 31, 1960, electric pumping service was being supplied to more than 4,100 oil wells, as well as direct service to such other sectors of the oil industry as gathering stations, refineries and pipeline pumping. Several industrial plants near Edmonton were also served.

An extensive farm electrification program is in progress in Alberta and at Dec. 31, 1960 the Company was serving 37,114 farms. Calgary Power constructs, operates and provides for the engineering of these co-operatives through a non-profit subsidiary (Farm Electric Services Limited) and energy is supplied to the farm co-operative consumers at cost.

Canadian Utilities, Limited.—This company, with head office at Edmonton, supplies three major areas in the province, covering 35,000 sq. miles: the Grande Prairie District, outlined by the British Columbia border, Hythe, Spirit River, Lesser Slave Lake, Smith, Swan Hills, Fox Creek and the city of Grande Prairie; the Vegreville District, outlined by Vegreville, Smoky Lake, Cold Lake, the Saskatchewan border, the city of Lloydminster and the town of Vermilion; and the Drumheller District, outlined by Three Hills, Stettler, Forestburg, Consort, the Saskatchewan border, Empress, the Red Deer River, Cessford and the city of Drumheller.

Three interconnected plants supply the Grande Prairie District: a 1,300-kw. natural-gas diesel unit at the Fairview plant, several diesel and gas diesel units totalling 5,800 kw. at the Grande Prairie plant, and a 10,000-kw. gas turbine, which burns sour flare-gas from nearby oilfields, at the Sturgeon plant. In addition, an 8,500-kw. gas turbine is being moved from Vermilion to the Sturgeon plant in 1961; and two tie-lines with Northland Utilities are used by the two companies to serve the Peace River–Grande Prairie area. Three interconnected plants supply the Vegreville and Drumheller Districts: a 32,000-kw. coal-fired steam unit at the Battle River plant, three coal-fired turbines totalling 19,000 kw. at the Drumheller plant, and four gas-fired steam turbines totalling 9,000 kw. at the Vermilion plant, where a new 30,000-kw. gas turbine is being installed in 1961. Tie-lines with Calgary Power are used by both companies for interchange of power. Smaller isolated diesel plants totalling 815 kw. supply Fort Chipewyan, Smith, Anzac and Simonette in Alberta and Hudson Hope in British Columbia.

At Dec. 31, 1960, the company served 43,721 customers in 246 communities, and 138 rural electrification associations, through a network of 3,982 miles of transmission and distribution lines and 10,940 miles of rural electrification association lines. Since 1949, more than 11,700 farms have been electrified on a co-operative basis, whereby the rural electrification association systems are constructed and operated at cost for the farmers. The company supplies electrical service to more than 1,500 oil wells, batteries and pipeline pumping stations, as well as to various gas processing plants, oil refineries, coal mines, lumber mills and other industries.

The company's three subsidiaries are: McMurray Light and Power Company Limited, with a 475-kw. diesel plant serving 334 customers; and the Yukon Hydro Company Limited and the Yukon Electrical Company Limited, which together serve 1,814 customers in Whitehorse, Haines Junction, Watson Lake, Carcross and Carmacks in the Yukon Territory, using a total of 1,650 kw. in hydro units, 1,920 kw. in diesel units, and a tie-line from the Northern Canada Power Commission's 15,000-hp. hydro plant near Whitehorse.

Northland Utilities Limited.—This company, with headquarters at Edmonton, supplies electrical service to 10,000 customers located in 33 communities. Diesel or gas-fuelled generating plants are located in Jasper, Athabasca, High Prairie, Fort Vermilion, McLennan, Peace River, Fairview and Lac la Biche in Alberta, and at Hay River in the Northwest Territories. A hydro-electric generating plant augments the supply at Jasper. Through 175 miles of 69,000-volt transmission line and 250 miles of 24,000-volt transmission line, service is distributed to 27 additional communities and approximately 2,300 farm customers are served by rural co-operative lines. A subsidiary, Uranium City Power Company Limited, generates and distributes electricity to 500 customers in Uranium City, Sask.

Northland Utilities supplies 5,100 customers with natural gas in 15 communities in northern Alberta—Fairview, Bluesky, Whitelaw, Brownvale, Berwyn, Grimshaw, Grande Prairie, Spirit River, Sexsmith, Rycroft, Woking, Clairmont, Peace River, High Prairie and Jasper. A subsidiary, Northland Utilities (B.C.) Limited, supplies gas to over 3,000 customers in Dawson Creek and Pouce Coupe, B.C.

British Columbia.—The British Columbia Power Commission was appointed in April 1945 under the provisions of the Provincial Electric Power Act. Operations were commenced in August of the same year with the acquisition of electrical properties in several parts of the province. The following statement shows the growth in the number of customers from 1951 to 1960:—

Year Ended Mar. 31—	*Services Acquired*	*Services Installed*	*Total Services for Period*	*Cumulative Services to End of Period*
	No.	No.	No.	No.

Northwest Territories and Yukon Territory.—The Northern Canada Power Commission, formerly Northwest Territories Power Commission, was created by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include Yukon Territory. The Commission has authority to construct and operate power plants as required in the Territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse, Y.T., the Mayo River near Mayo Landing, Y.T., and the Snare River northwest of Yellowknife, N.W.T. Diesel-electric plants are operated at Fort Simpson, Fort Smith, Fort Resolution, Frobisher Bay and Inuvik, N.W.T., and at Field, B.C.

The Whitehorse Rapids power development, which has been in service since November 1958, supplies the power for the Department of National Defence at Whitehorse, most of the power for the city of Whitehorse, and the power for heating systems of the Department of National Health and Welfare Hospital and two hostels operated by the Department of Citizenship and Immigration.

The Snare River hydro developments supply power to the mines in the Yellowknife area and, with the Bluefish hydro-electric plant of the Consolidated Mining and Smelting Company of Canada Limited, supply the town of Yellowknife. The original Snare Rapids plant has been in operation since September 1948 and the Snare Falls plant, situated on the same river about 10 miles downstream from the original plant and remotely controlled from Snare Rapids, was placed in service in November 1960.

The Mayo River plant, completed in November 1952, supplies power to mining properties in the Elsa and Keno areas and to the Mayo Landing and Keno City communities.

The diesel-electric plants supply the needs of Federal Government departments and general residents of the communities in which they are located. In addition to these plants the Commission operates a power and heating plant at the Fort McPherson residential school for the Department of Northern Affairs and National Resources, and the municipal water system and central heating plant supplying the hostel and school premises at Fort McPherson, N.W.T. Details of construction completed or under way in the Territories during 1960 are outlined at p. 582.

PART I.—FISHERIES

Section 1.—Commercial Fishery Resources*

The waters of two mighty oceans—the Atlantic and the Pacific—and the most extensive inland system of rivers and lakes in the world provide Canada's fishermen with valuable harvests. The annual catch of some 2,000,000,000 lb. of fish and shellfish has a marketed value of more than $200,000,000. Only about one-third of this catch is used in Canada, the remainder going abroad in fresh, frozen, canned, salted, dried or otherwise preserved form. Of the fish-exporting nations of the world, Canada is surpassed only by Norway and Japan. There are more than 79,000 commercial fishermen in Canada and, in addition, many thousands of persons are employed in the fish-processing industry.

Atlantic Fisheries.—On the Atlantic Coast, groundfish, especially cod, and lobsters are the mainstay of the fisheries, while herring, mackerel and alewives supply a pickling industry that is also of considerable importance. The Atlantic catch is ordinarily about twice as heavy as the Pacific and, generally, is more valuable.

The cod banks in the Atlantic off Newfoundland are known to fishermen all over the world. Besides cod, they yield other groundfish, mainly haddock, redfish, plaice and flounder. Although two-thirds of the cod catch is landed in Newfoundland, the lesser part of the Island's receipts now comes from the banks. The traditional Newfoundland schooner fishery which formerly supplied the saltfish trade has died out but a very active inshore summer trap fishery, followed by a trawl fishery from small boats in the late summer and early autumn, continues to supply the industry. The bulk of the trap and trawl catches is salted. The family business which combines fishing with processing has disappeared from the Atlantic Coast except in Newfoundland, and even there it is diminishing. Nova Scotia's drying plants depend more and more on raw supplies from Newfoundland, which they receive in salt bulk form. Heavy exports of saltfish go from the Atlantic Provinces to the Caribbean area, with smaller amounts to Italy, Spain and Brazil.

---

* Prepared by the Information and Educational Service, Department of Fisheries, Ottawa.

Although schooner fleets are a thing of the past, except for a few vessels sailing from Nova Scotia, modern trawlers and draggers out of ports along the southern coast of Newfoundland and the Atlantic Coast of Nova Scotia fish the banks in all seasons, weather permitting, to supply mixed groundfish to the processing plants in their home ports. These produce fresh and frozen fish and fillets as well as frozen fish blocks to meet a North American demand that increases steadily with the population. The frozen blocks are the raw material of the now important fish-stick industry.

In 1960 the lobster catch was 50,100,000 lb., with a landed value of $18,040,000. Although there was a decrease in cod landings—603,400,000 lb. as compared with 642,000,000 lb. in 1959—the value of the catch to fishermen at $16,823,000 was only slightly lower than that of the previous year. Because of their relatively high unit price, lobsters are the main source of income for fishermen in New Brunswick and Prince Edward Island, and provide about one-third of the value of the Nova Scotia catch. They are taken in baited traps as they crawl about in shallow water looking for food. Most of the catch is marketed alive, fresh boiled or as fresh or frozen lobster meat and the remainder is canned. The United States provides an excellent market with peaks of demand in the summer vacation season and at Christmas. Hitherto unexploited scallop beds, recently discovered on George's Bank off the mouth of the Gulf of Maine, are becoming an increasingly valuable resource.

The annual Atlantic herring catch is around 225,000,000 lb., about one-third of which is comprised of the small-sized herring used by New Brunswick's sardine canneries. Smoke houses and pickling plants produce a variety of herring products and the fish are also in steady demand for lobster bait. The bulk of the catch is taken in purse-seines or weirs. Mackerel and alewives are also utilized by pickling plants but both have provided dwindling catches over the past decade. Mackerel are netted in open water and alewives are trapped as they enter estuaries on their way to freshwater spawning beds.

The Atlantic salmon catch, after a long and fairly steady decline, has been on the increase in recent years. This fish goes exclusively to fresh markets. Before the War, frozen Canadian Atlantic salmon was in demand in the United Kingdom. Since the War it has been barred from that market by import restrictions and there has been scant surplus for export in any case. In 1959, however, the import restrictions were lifted and, with improved catches, hopes have risen for resumption of this trade.

Pacific Fisheries.—Salmon is the most valuable of the Pacific fisheries, although the landings of herring are heavier. Halibut is third in importance, followed by other groundfish and shellfish. The proportion of the total landed value provided by salmon gives an indication of the importance of that fishery to British Columbia fishermen. For example, in 1960, a low year in salmon cycles, the total landed value of the Pacific catch was $28,000,000, of which salmon accounted for $17,000,000. In the high cycle year of 1958, the value of the salmon catch alone was $35,000,000 and the total landed value was slightly over $50,000,000.

The salmon catch is made up of five species—sockeye, pink, chum, coho and spring. These fish are caught as they return from the sea to their native streams to spawn and die. Sockeye, for instance, return after four years at sea so that, four years after a favourable hatching year on sockeye streams, a heavy catch of this species may be expected. When the peak runs of several different species occur in the same year, fishing is very good. The fish congregate off the mouths of their rivers and move into them in heavy concentrations. Commercial salmon fishing is limited to tide-water and is divided into two efforts—net fishery by seine and gillnet for the canneries and troll fishery for the fresh fish market. Net fishing is pursued in all the protected waters of British Columbia's deeply indented shoreline, and troll fishing off coasts facing the open sea, especially off the western coast of Vancouver Island. Hundreds of seiners and thousands of gillnet and troll boats engage in the fishery every year.

After hatching, sockeye spend a year or two in a lake before going to sea. When caught on their return from the ocean they weigh about six pounds each. This is a summer fishery, usually from mid-June to September. The bulk of the catch is taken by gillnet and the remainder by purse-seine; as sockeye feed on small crustaceans, they are not attracted by the lures of the troll fishery. Landings are smaller than the catch of chums or pinks but more valuable because, with its firm texture and attractive colour, canned sockeye commands the highest consumer price.

Pink salmon mature and return after only two years at sea. The fish average four to five pounds. Both pinks and chums are widely distributed up and down the coast but pinks appear in a more concentrated run. Chums return after four years at sea when they average about ten pounds in weight. They usually appear in two rather scattered runs, one in early summer and one in the autumn, and contribute somewhat more than pinks to the total volume of the salmon catch. Coho hatch in small streams and are vulnerable to summer water levels. At sea they grow rapidly to weights between five and ten pounds and return to spawn after three years. They are taken by net or troll for canning or for the fresh market, depending on current demand. Mature spring salmon usually run between ten and twenty-five pounds in weight. Since they feed on small fish, they can, like coho, be taken by lure but about one-third of the catch is secured with gillnets, notably at the mouth of the Fraser. They are usually caught in their third or fourth year and are favoured on the fresh fish market.

About three-quarters of the annual salmon catch is canned and most of the remainder goes to the fresh market. Vancouver and Prince Rupert are the major processing centres.

The main stocks of herring move inshore in the autumn and winter, spawn in the spring and then return to summer feeding grounds offshore. Only small stocks remain on the fishing grounds throughout the year. Consequently, the bulk of the catch is taken from October to March. As the total known supply of this species in British Columbia is being exploited, catches are limited to local quotas by area. Fishing is by purse-seine and the catch is converted into oil and meal, mainly at Steveston, Vancouver or Prince Rupert. The 1960 herring catch was less than half that of the previous year—186,600,000 lb. compared with 443,000,000 lb. in 1959. Fishing operations ceased for several months during the year because of a depressed market for products of this phase of the industry.

While salmon and herring live at mid-water depths, halibut feed on the bottom and are usually caught beyond the three-mile limit. Canadian and American longliners share in this fishery off the coasts of both Alaska and British Columbia and, by joint agreement, the catch is controlled by a system of quotas and fishing seasons in various areas. The most productive halibut grounds on the Continent are those adjacent to British Columbia, and American as well as Canadian vessels, even when fishing off Alaska, usually land at Prince Rupert or Vancouver. The catch amounted to 33,500,000 lb. in 1960, an increase of 3,600,000 lb. over the previous year; however, the landed value at $5,433,000 was lower by $178,000 than the 1959 value. Much of the halibut caught is frozen for the fresh market in the United States.

Two other species of bottom-feeding fish—soles and grey cod—are taken by the trawler fleet, usually beyond the three-mile limit either in Hecate Strait or off Vancouver Island. These vessels drag a large-mouthed, tapering net across the ocean floor and scoop up the fish feeding there. They operate mainly in the spring and summer and on smooth bottom in depths between twenty and seventy fathoms. During the winter they pursue a limited fishery in the relatively protected waters of the Strait of Georgia. Ling cod and black cod also feed on the bottom. Small boats rigged with one or two lines and a few hooks take most of the ling cod catch in the Strait of Georgia but further supplies are captured together with other groundfish in course of the trawler fishery. The bulk of the black cod is taken off Alaska by the large longliners that also fish for halibut. These vessels lay their long lines on the ocean floor with hundreds of baited hooks attached to them.

All groundfish, including halibut, are marketed mainly in filleted or steak form, usually fresh or frozen but occasionally smoked. Canada's Pacific groundfishery developed rapidly during and just after World War II when there was world-wide urgent need for protein food supplies. Expanding from almost negligible proportions in the prewar decade, landings now often exceed 20,000,000 lb. annually. A recent feature of this growth is an increasing trade in coarse fish for mink feed.

British Columbia also has a considerable shellfish resource, including crabs, oysters, shrimps and clams. The crab fishery, centred in the northern Queen Charlotte Islands, has developed in response to steady market demand. Crabs are trapped from the low-tide mark to a depth of about 120 feet and are marketed either fresh or canned. The oyster industry is predicated on yearly import of spat from Japan, native supplies having been fished out many years ago and attempts to transplant Atlantic oysters having achieved very limited success. The present fishery is located in the Strait of Georgia. The oysters are larger than the Atlantic variety and are not eaten raw. They are shucked for market and sold fresh or frozen. Shrimp trawling in the Strait of Georgia is an off-season source of income for salmon troll or gillnet boats. Shrimps are cooked before the meat is taken from the shell, to be sold fresh or frozen. Razor clams occur in the Queen Charlotte Islands and butter clams in many small areas of suitable beach along the full length of the coast. Both kinds are dug by Indians and canned. Little neck clams, virtually limited to Vancouver Island, are mainly exported fresh to the United States market.

Inland Fisheries.—In 1960 the value of fish from Canadian lakes and streams exported to the United States totalled $18,976,000. The bulk of the catch comes from the Great Lakes, Lake Winnipeg in Manitoba and Great Slave Lake in the Northwest Territories, but 600 smaller lakes are also fished commercially. Ontario is the heaviest producer, with Manitoba in second place and Saskatchewan in third but output of all western areas is increasing as improved transportation facilities enable fishermen in remote areas to get their catch to market. Great Slave Lake yields almost all the commercial catch of the Northwest Territories. It supports a gillnet fishery for whitefish and lake trout, with catch limits set by the Federal Government.

Whitefish and pickerel, in approximately equal proportions, together comprise about half the Canadian freshwater catch and perch is next in both quantity and value. Sturgeon and lake trout are valuable additions and tullibee and pike are taken in considerable quantities. A wide variety make up the remaining 10 p.c. of the landings, ranging from the aristocratic goldeye to the lowly chub.

Section 2.—Governments and the Fisheries

The British North America Act gave the Federal Government full legislative jurisdiction for the coastal and the inland fisheries of Canada and under this Act laws are made for the protection, conservation and development of the fisheries throughout the country. However, the provinces have, by agreement, assumed administrative responsibilities in varying degree. Consequently, though all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done without duplication of staff either by federal or by provincial officers, according to arrangement.

Specifically, all tidal or sea fisheries except those of the Province of Quebec are administered by the federal Department of Fisheries, and the freshwater or non-tidal fisheries, with some exceptions, are administered by the provincial departments. Quebec takes responsibility for all its fisheries including those in salt waters. Ontario, Manitoba, Saskatchewan and Alberta administer their freshwater species. In British Columbia, provincial government control extends to the freshwater forms and the Federal Government is responsible for marine and anadromous species. In Prince Edward Island, Nova

Scotia, New Brunswick, Newfoundland and the Yukon and Northwest Territories, the Federal Government maintains complete control; administration of the fisheries of the National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Northern Affairs and National Resources.

Subsection 1.—The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:—

(1) The Department of Fisheries proper with headquarters at Ottawa, Ont., and area offices under Area Directors at Vancouver, B.C., Winnipeg, Man., Halifax, N.S., and St. John's, Nfld.

(2) The Fisheries Research Board of Canada with headquarters at Ottawa and eight stations across Canada.

(3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of these agencies is given in this Subsection.

The Department of Fisheries.—The chief responsibilities of the Department of Fisheries throughout Canada are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the staff of the Department is stationed in the field and is composed mainly of protection and inspection officers. The protection officers, including those on the Department's 82 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish, and are also responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant section of the Meat and Canned Foods Act.

A conservation program is carried out by the Conservation and Development Service of the Department. Protection officers enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, and also inspect spawning streams and keep them clear of obstructions. Biologists investigate such problems as pollution and water supply, and engineers construct fishways to enable fish to bypass obstructions of all kinds. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

For the past few years a bounty has been paid for the killing of the parasite-carrying harbour seals along the Atlantic and Pacific Coasts at a rate of $10 for adults and $5 for young seals. Total payments for the year ended Mar. 31, 1960 amounted to $31,200.

Inspection of fish and fish products to ensure a high standard of quality is carried out by the Inspection and Consumer Service, and fish inspection laboratories are maintained on the Atlantic and the Pacific Coasts and in Toronto and Winnipeg. A staff of home economists operates test kitchens in Ottawa, Toronto, Vancouver, Montreal, Halifax, Edmonton and Winnipeg, and conducts demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the medium of printed material, films, radio, television and exhibitions, the Information and Educational Service of the Department informs the public on the various aspects of the industry and the work of the fisheries services, with the object of developing a better understanding of the resource and those engaged in its exploitation. This Service works closely with the Conservation and Development Service in matters concerning the conservation of fisheries and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in the domestic, United States and other markets.

The Economics Service engages in two related fields of responsibility: (1) to provide the government and the commercial fishing industry with current information, including statistical data, under the general heading of trade intelligence, and (2) to carry out studies and investigations in the primary fisheries and in the processing and distribution of fish products. In the first field, the Service works in close co-operation with the Dominion Bureau of Statistics and the Foreign Trade Division of the Department of Trade and Commerce; in the second, there is similar collaboration with the Fisheries Research Board. In both, a necessary contribution is made to the formulation of policy for fisheries management, industrial development and market services.

In addition to these regular services, the Department assists the commercial fishing industry in several special ways. To promote efficient primary fishing operations and improve the marketing of fishery products, assistance is provided for the construction of draggers and longliners and for bait-freezing and storage facilities on the Atlantic Coast. The Fishermen's Indemnity Plan affords low-cost protection from losses of boats and lobster traps through storms and other causes. The Plan, in operation since 1953, meets a long-standing need on the part of small-scale individual fishermen. Vessels valued at from $250 to $10,000 may be insured with payment of a premium of 1 p.c. of the appraised value per annum. Up to Dec. 31, 1960, a total of 5,560 vessels with an appraised value of $17,545,505 had been insured under the Plan. In response to considerable demand for a similar type of protection against unusual losses of fishing gear and equipment other than vessels, a first step was taken by the introduction of regulations giving a measure of compensation to lobster fishermen suffering abnormal losses of lobster traps, provided that a small premium has been paid by the fisherman. The premium rate varies in accordance with conditions in the different fishing areas but has been kept low. The Department also provides financial assistance to educational institutions agreeing to carry out specialized educational work among fishermen.

International Fisheries Conservation.—Conservation of the resources of the high seas can be effected only through regulation, and for this purpose international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world in joint fisheries conservation development. Major examples of this joint effort are the International Pacific Halibut Convention, concerned with the preservation of the halibut stocks of the north Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Convention, concerned with the conservation and development of the sockeye and pink salmon of the Fraser River. Investigations carried out under the auspices of Commissions appointed under these conventions, subsequent regulation and limitation of catches, and the construction of salmon fishways appear to have been successful in arresting and reversing an earlier trend toward depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under a treaty signed in 1911, known as the (North Pacific) Sealing Convention, pelagic sealing was prohibited while the animals were migrating to and from the Pribilofs where most of them breed. This treaty had been signed by the United States, Canada, Russia and Japan, and was one of the earliest conventions on resources of the sea. In 1941 Japan abrogated the treaty and the following year Canada and the United States signed a Provisional Fur Seal Agreement under which Canada, in return for abstaining from pelagic sealing, received 20 p.c. of the annual catch, which was supervised by the United States. A conference to re-negotiate the original convention was begun in Washington in November 1955 and a new settlement was signed by the original four countries on Feb. 9, 1957.

In 1949 the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The Commission established under this Convention, with headquarters at Halifax, N.S., makes scientific investigations of the fishery resources of the northwest Atlantic.

The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories are: Canada, Denmark, Iceland, the United States, the United Kingdom, France, Italy, Norway, Portugal and the Federal Republic of Germany.

A step toward international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951 when Canada, the United States and Japan conferred at Tokyo. The resulting Convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention is studying the northern Pacific fisheries and will determine the application of the treaty principles and promote and co-ordinate the necessary scientific studies.

The seventh, and latest, international fisheries agreement to which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research and in a program for the control of the predator lamprey in these waters. This Convention came into force in October 1955.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted in some years off the coasts of Newfoundland and British Columbia.

The Fisheries Research Board.*—The Fisheries Research Board of Canada was established in 1937 to succeed the Biological Board of Canada which in 1912 had succeeded the Board of Management of the Canadian Marine Biological Station established in 1898. The Board functions under the control of the Minister of Fisheries as an independent fisheries research body carrying out "investigations of practical and economic problems connected with marine and freshwater fisheries" (Fisheries Research Board Act) and, as such, provides the Department of Fisheries with services for research into problems encountered by the Department in its administration of the fisheries of Canada. The Board carries out biological research through five centres across Canada, oceanography at two and technological studies at five others. The Board consists of a full-time chairman appointed by the Governor in Council and up to 18 unpaid members appointed by the Minister of Fisheries; as stated in the Fisheries Research Board Act, "a majority of the members of the Board, not including the Chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department and the fishing industry".

The biological work of the Board is designed primarily to provide a general scientific basis for the conservation and wise management of Canada's vast marine and freshwater fishery resources. Investigations include the life histories of the various species of commercial importance, their population dynamics, their diseases and enemies. Also investigated are positive cultural methods in areas where some control of the environment is possible; new fishing grounds are sought and experiments in improvement of fishing methods undertaken. The biological work on the Atlantic Coast is conducted out of stations at St. Andrews, N.B., and St. John's, Nfld.; Arctic work is directed from Montreal, Que.; work on freshwater fish is directed from a station at London, Ont.; and Pacific Coast work is directed from a station at Nanaimo, B.C.

Oceanography includes the study of the biological, chemical and physical aspects of the marine and freshwater environments of fish and other aquatic organisms of importance. These studies are necessary to understand the occurrence and distribution of the fish and are carried out by the Board's two oceanographic groups, operating from Halifax, N.S., and Nanaimo, B.C.

---

* Prepared by Dr. J. L. Kask, Chairman of the Fisheries Research Board of Canada, Ottawa.

The technological studies are aimed at making the best use of Canada's fishery catches. Investigations are conducted toward improving methods of preserving and processing and in the utilization of fish wastes. In recent years considerable work has been done on mechanization to further develop higher efficiency in the industry. The technological work on the Atlantic Coast is carried out at stations in Halifax, N.S., and Grande Rivière, Que., and applied work for Newfoundland is under the supervision of a unit at St. John's, Nfld., and for inland areas under a unit at London, Ont. A station at Vancouver, B.C., undertakes Pacific Coast studies.

The Fisheries Prices Support Board.—Under the Fisheries Prices Support Act passed in 1944, this Board was set up in July 1947 to recommend to the Government price-support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of $25,000,000 but only on recommendation of the federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative activities. The work is closely integrated with that of the Department's Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities and on factors affecting the income of fishermen in the various producing areas. The financial position of fishermen is kept under continuous review and recommendations are made to the Government on the basis of the findings. Special investigations are made when serious problems arise in particular areas.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with improvement and development of fishing and production methods. It conducts experiments and demonstrations in longlining, Danish seining and otter trawling, in the construction of multi-purpose fishing craft, and in the exploration of potential fishing grounds.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea draggers and also to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production. Fishermen receive further aid through bounty payments at the rate of $160 per ton for newly constructed vessels under the Fishing Ships (Bounties) Act of 1955. The Fishing and Coastal Vessels Rebuilding and Repairs (Bounties) Act was passed in 1958 to enable the government to assist financially in maintaining and prolonging the life of the existing fleet, and in 1959 the Coasting Vessels (Bounties) Act was passed, designed to encourage the construction of new coastal vessels for service in Newfoundland waters by granting a maximum bounty payment of $300 per ton for locally built ships not exceeding 400 gross tons.

---

* Prepared by the respective provincial departments responsible for fisheries administration.

Other services include the operation of fisheries training schools in navigation and engineering, advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics, assistance to fishermen's unions, weather and ice reports, and search and rescue. The Fisheries Salt Act passed in 1957 implements more rigid control over the use of fisheries salt.

The inland waters of Newfoundland, although they provide excellent sport fishing, are not commercially exploited. The lakes and ponds remain under the authority of the Natural Resources Branch of the provincial Department of Mines and Resources, but the rivers and streams—the resort of migratory fish such as salmon and sea trout—are under federal control. Matters of conservation and guardianship are therefore mainly or wholly the concern of the federal Department of Fisheries although, to the extent to which they affect the ponds and lakes, they are subject to provincial or joint action.

Prince Edward Island.—The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity, and is concerned mainly with development of the fisheries industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and branches of the federal Department of Fisheries, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at an interest rate of 5¾ p.c. Since its reorganization in 1949, the Board has lent approximately $1,500,000 for the modernization of the inshore and offshore fleets. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act under which loans may be made for facilities handling agricultural, horticultural or fishery products.

Game fisheries are the responsibility of the Department of Industry and Natural Resources. The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada at sites provided by the provincial Department. Unfortunately many of the formerly fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.—Although the Federal Government has exclusive jurisdiction over the marine and inland fisheries of Nova Scotia and attends to all phases of administration related thereto, the Nova Scotia government operates in several fields where provincial initiative is found to be necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the Fisheries Division of the Department of Trade and Industry. The Fishermen's Loan Board and the Industrial Loan Board are administered within this Department; the first makes loans to fishermen for the purchase of boats and engines, and the second makes loans for the construction or improvement of fish processing plants. A staff of fisheries engineers performs inspection and survey duties for the Loan Boards and provides technical assistance and advice to loan applicants and others in the fisheries and allied industries, notably the boatbuilding industry. A staff of instructors conduct training courses for fishermen in the care and maintenance of marine engines, in basic navigation and in the design, construction and maintenance of nets and other gear. This program receives substantial assistance from the Vocational Training Branch of the federal Department of Labour. The on-course instruction is supplemented frequently by informal on-the-spot assistance to smaller groups who find themselves in need of technical help with particular problems. The Fisheries Division, with financial and/or technical assistance provided by the Industrial Development Service of the federal Department of Fisheries, also organizes and conducts demonstrations of fishing methods and gear of types untried in some or all of the several fishing areas of the province.

New Brunswick.—The fisheries of New Brunswick, both tidal and inland, are under the jurisdiction of the federal Department of Fisheries and angling in Crown waters is under the jurisdiction of the provincial Department of Lands and Mines. To supplement the activities of the federal Department of Fisheries and to establish closer liaison between the fishing industry and various government departments and agencies, both federal and provincial, in all matters relating directly or indirectly to fisheries, the New Brunswick government created in 1946 a Fisheries Branch and a Fishermen's Loan Board within its Department of Industry and Development.

Commercial fishing is one of the most important basic industries of the province. More than 6,500 fishermen and 2,500 plant workers are employed in this industry; the gross yearly income of the fishermen is over $9,000,000 and the total marketed value of fish products is approximately $25,000,000. Recognizing its contribution to the economy of the province, the New Brunswick government appointed, in 1960, a Deputy Minister of Fisheries who is directly responsible to the Minister of Industry and Development in all matters relating to fisheries.

Since its inception, the Fishermen's Loan Board has disbursed more than $5,300,000 for the construction of fishing vessels and the purchase of modern equipment and diesel motors for fishermen of the province. Loans of $1,500 to $2,500 are made available to inshore fishermen for the purchase of lobster boats and engines, and amounts of $9,000 to $50,000 to offshore fishermen for the building and equipping of modern longliners, Danish seiners and draggers. These amounts represent the net amount lent to fishermen, which is about 70 p.c. of the total cost of the vessels after deducting the required down-payment and the Federal Government subsidy of $165 per gross ton. New Brunswick now has a fleet of 89 groundfish draggers and 22 longliners and Danish seiners.

New designs of fishing vessels are being prepared by the Fisheries Branch in co-operation with naval architects and boat-builders. The vessels, as completed, are being used for experimental purposes and a certain pattern of standardization is followed to maintain building and maintenance costs at the lowest possible level. A 48-foot longliner was tested in 1960 as a Danish seiner with very satisfactory results. The Fisheries Branch is continuing to study the vessel to determine its applicability to gillnetting for groundfish. In co-operation with the Industrial Development Service of the federal Department of Fisheries, experimental projects such as codfish gillnetting, Danish seining for flounders and plaice, mid-water trawling for sardines and herring, mechanical digging for bar clams and quahaugs, etc., are being undertaken by the Fisheries Branch in an effort to introduce more modern fishing methods and equipment.

Practical training is made available by the Fisheries Branch to dragger operators and inshore fishermen during the winter season in various parts of the province. A permanent school of fisheries has been in operation, under the auspices of the Caraquet School Board, since the autumn of 1959. Nineteen students attended the first portion of the two-year course.

To co-ordinate the efforts of the Atlantic Provinces and the Federal Government in the promotion of fisheries, the federal Department of Fisheries formed a Provincial-Federal Atlantic Fisheries Committee of which the Province of New Brunswick is a member.

Quebec.—The provincial Ministry of Game and Fisheries administers both the sea and the inland fisheries of Quebec. The Ministry has two divisions—the Division of Maritime Fisheries and the Division of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.—The Quebec Government gives much consideration to the administration of the sea fisheries of the province. For the benefit of producers and fishermen, it operates a network of cold storage plants for the freezing and preservation of fish. The network comprises 59 plants, together having a daily freezing capacity of 485 tons and a storage capacity of 22,000,000 lb. of fish. These plants also perform a valuable service to fishermen by providing them with frozen bait and ice. In addition, the Ministry owns and maintains 123 stations in small fishing ports where fish is kept under proper conditions while awaiting collecting trucks or boats, and also operates two artificial drying plants with a processing capacity of 6,000,000 lb. of fish annually.

The Ministry maintains a staff of fish wardens, technicians and technologists to administer fishery legislation and to assist in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City with an office at Gaspe for the administration of cold storage plants. Fish inspection is carried out by federal inspectors who are vested with additional powers by the Provincial Government with respect to local sales.

Educational work among the fishermen and producers is conducted by the Ministry to teach the latest methods of fish preparation and of obtaining high-quality products. The new Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, and the Superior School of Fisheries at Ste. Anne de la Pocatière conducts a four-year course for technologists. Encouragement is given to the co-operative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. The Ministry adheres to the federal-provincial agreement on the building of draggers and longliners and assumes the building costs on a capital refunding plan.

The fish trade is promoted through advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets as well as through exhibits at fairs.

Hydrographical research in the Gulf of St. Lawrence includes studies on the location of new fishing grounds, and experiments on seafish biology are conducted by a Marine Biological Station at Grande Rivière and two substations on the North Shore and the Magdalen Islands. This research has brought into use new types of fishing vessels recommended to fishermen. The Ministry also operates a Limnological Laboratory at Quebec City for studying the biology of the freshwater fish of the St. Lawrence River and its tributaries. The Quebec Aquarium at Quebec City exhibits freshwater and saltwater fish in 30 large tanks.

Inland Fisheries.—The Division of Fish and Game exercises jurisdiction over the inland waters. Three hundred full-time wardens are employed and licences are required for sport fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions. Five hatcheries are maintained at strategic points throughout the province—St. Faustin, Lachine, Lac Lyster, Tadoussac and Gaspe. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, maskinonge fingerlings and older fish.

The Ministry administers five parks and 13 reserves in all of which, except for Mount Orford Park, excellent fishing may be found. Gaspesian and Laurentide Parks are renowned for their trout fishing. Chibougamau Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Five salmon streams, all under the jurisdiction of the Fish and Game Division, are open to anglers—the Romaine River, the St. Jean River, the Petite Cascapédia River, the Matane River and the Port Daniel River. The Ministry co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

The Biological Bureau of the province, located at the University of Montreal, operates two stations for practical work in the study of problems connected with marine life. One is located in Mont Tremblant Park and the other in Laurentide Park.

Ontario.—The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests. The Branch operates under the authority of the federal Fisheries Act, the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing.—The commercial fishing industry in Ontario provides employment for about 3,200 persons directly and for many more indirectly, and produces an annual yield of from 35,000,000 lb. to 45,000,000 lb. of fish. An all-time high catch of about 60,000,000 lb. was recorded in 1956. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie which is noted for its blue and yellow pickerel, white bass, whitefish and perch. Other principal species of fish taken commercially are lake trout, herring or cisco, sturgeon, pike, catfish, bullhead, carp, sucker and smelt. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-foot tugs, and types of gear vary from the most common gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been modernized extensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs, such aids as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Trawling for smelt is being carried out experimentally in Lake Erie. This fishing technique is new in the Ontario fishery but has been proven very efficient in harvesting smelt on a year-round basis in this lake.

Most Ontario fishermen are organized into various local associations. These associations are, in turn, represented by the Ontario Council of Commercial Fisheries and by the Lake Erie Fisheries Council, which perform important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of interest also in the organization of the fishery in the province.

Angling.—The sports fishery in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some 68,490 sq. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as lake, speckled, rainbow and brown trout, yellow pickerel, black bass, pike and maskinonge. It is difficult to measure the total value of the sports fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of $2,500,000. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 22 forestry districts of the province.

Provincial Hatcheries.—Ontario operates 20 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of various species of game and commercial fish. The primary species reared in these operations include trout (lake, speckled, brown and rainbow), maskinonge, bass, whitefish and yellow pickerel. Four of the finest trout-rearing stations on the Continent are located in this province—at Dorion near Port Arthur, Sault Ste. Marie, Hills Lake near Englehart, and Chatsworth.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sports fisheries on the respective lakes. In Algonquin Park detailed studies concerning lake trout and smallmouth bass are in progress and management techniques are being tested against the background of a creel census which has been continuous since 1936. Studies of speckled trout have been re-instituted after a five-year break in continuity.

A selective breeding experiment concerning the hybrid between lake trout and speckled trout is progressing favourably. The deep-swimming character of the lake trout and the character of maturity at early age of the speckled trout are those being selected for combination in the hybrid.

Co-operation by Ontario in the field of gear development is being extended through the Federal-Provincial Committee for Ontario Fisheries and in the field of sea lamprey control through the Great Lakes Fishery Commission.

Manitoba.—The freshwater fishery resources of Manitoba have assumed an increasingly important position in the economy of the province. Although the commercial fishing industry experiences periods of fluctuation, nevertheless it is constantly expanding. Production in 1960 of 31,049,100 lb. valued at $6,507,348 provided full-time or part-time employment for 5,330 fishermen. In addition, at least 6,000 persons were engaged in subsidiary industries such as fish-processing, transportation, boat-building and other related industries.

The lakes and streams of the province produce 15 varieties of commercial fish, the most important being whitefish, pickerel, sauger and northern pike. Some 2,145 commercial fishing boats are in operation, varying in size from lake freighters to small skiffs powered by outboard motors. The value of these boats together with nets and other equipment is estimated at $2,910,900 and investment in processing plants and cold storage facilities at approximately $3,000,000, which makes a total capital investment of at least $6,000,000 in plant and equipment.

The Department of Mines and Natural Resources of Manitoba, in supervising commercial operations and enforcing fishery regulations, operates a fleet of modern diesel patrol boats during the open-water seasons and uses bombardiers, snowmobiles and light trucks in winter. All patrol units are equipped with two-way radio communication instruments.

Two spawn-gathering camps and four fish hatcheries are in operation in the province. Two of the latter are pickerel hatcheries; one is engaged in the culture of whitefish eggs, and the other operates on a year-round basis producing several varieties of trout. The fish-culture program employs the latest scientific processes and large plantings of sport and commercial varieties have been made. Data gathered through the years indicate that such culture operations are essential to the maintenance of well-stocked lakes and streams. Five species of sport fish are cultured at the Whiteshell Trout Hatchery—speckled, brown, rainbow and lake trout, and a new hybrid variety called "splake". This splendid species of sport fish, developed by crossing speckled and lake trout, has created great interest among anglers.

A long-range scientific and biological program recently begun is designed to provide valuable factual information on such topics as lake limits and most favourable fishing seasons. Constant progress is also being made in the handling and processing of fish. Both the government and the industry are aware of the current market demands for high-quality packaged products processed in modern plants under sanitary conditions and three plants equipped to meet this demand are located at Lynn Lake, Island Lake and Gods Lake in northern Manitoba. The Department of Mines and Natural Resources, in co-operation with the Department of Health and Public Welfare, has inaugurated a plan to control health and sanitation as it relates to fishing stations and packing plants.

Angling is the major attraction in many of Manitoba's recreational areas and the fishery resource has an enhanced value when utilized in this way. During the year ended Mar. 31, 1960, almost 100,000 angling licences were sold, 13 p.c. of them to non-residents.

Saskatchewan.—The fishing potential of Saskatchewan, both commercial and sport, is becoming more widely realized. More than 31,500 sq. miles of water, about one-eighth of the province's surface area, provide the basis for the fisheries resource. There are at least 57 fish species found in Saskatchewan. The Fisheries Branch of the Department of Natural Resources, with head office at Prince Albert, is responsible for the administration of the fisheries, for the planning of policies and for the development of programs to ensure the proper management and utilization of the resource. The Branch has three main divisions—Fish Management (Commercial and Sport Fisheries Sections), Fish Research, and Fish Culture.

The highlight in the commercial fishing industry for the year ended Mar. 31, 1960 was the holding of the first annual meeting of Co-operative Fisheries Limited. There were 45 fishermen delegates present, representing 13 central and northern fishing areas. This meeting provided an opportunity for about 700 commercial fishermen (one-half of those licensed in the province), who sell their production through co-operative selling agencies, to have a greater share in and responsibility for the development of their industry. The commercial harvest for the year amounted to 12,549,782 lb. taken from 180 lakes with a value of $1,190,302 to the producer. The principal species were whitefish, lake trout, pickerel, northern pike and sturgeon. About 65 p.c. of this catch was taken in summer. Eleven processing plants operating in the province produced 2,787,776 lb. of fillets; five of the plants have qualified for federal inspection in accordance with the federal Department of Fisheries' voluntary fish inspection program.

During the year, 1,260 domestic fishing licences and 1,102 free Indian permits were issued. In addition, 83 fur farm fishing licences were issued to provide feed for 39,473 mink; mink ranchers used approximately 6,000,000 lb. of coarse fish (cisco, burbot and mullet).

Sport fishing has become very important in the province. In 1960, 102,605 angling licences were sold, accounting for a revenue of $248,825. There were 95,360 angling licences sold to residents, indicating that one in every nine Saskatchewan residents is a fisherman.

A research program initiated in 1948 has provided the basis for development of fisheries management programs and policies. The main objective has been to encourage multi-utilization of the fishery, keeping in mind the interests of the various groups particularly concerned with the resource—commercial fishermen, mink ranchers and anglers. The projects undertaken by the Research Division fall into five major categories: (1) studies on the basic productivity and character of lakes and streams; (2) studies of the ecological and life histories of important species of fish; (3) pollution investigations; (4) creel census studies; and (5) miscellaneous projects.

During 1960, biological and fisheries investigations were made of 11 water areas; investigations were initiated on lakes in two provincial parks; the study continued on the lake trout population at Lac la Ronge; pollution and carp research studies were continued; and the report on the survey of the five lakes on the Churchill River near Stanley was completed. There are five permanent biologists and one consultant on staff; in addition, 12 university students were employed during the summer.

The major achievements in the fish-stocking program included the stocking of 461,312 rainbow trout fingerlings in Thomson Lake, a 2,380-acre PFRA reservoir located in the southern part of the province. Approximately 16,100,000 pickerel fry were released in

35 lakes and about 16,040,000 whitefish fry were stocked in three lakes. In addition to the rainbow trout stocked in Thomson Lake, 187,605 fingerlings were stocked in nine water areas.

Alberta.—The Commercial Fisheries Branch and the Fish and Wildlife Branch of the Department of Lands and Forests administer commercial and game fishing, respectively, under authority of the Fisheries Act (Canada) and the Fishery Act (Alberta).

Commercial Fishing.—Regulations under the Fishery Act (Alberta), designed to improve the packing, handling, processing, storage and quality of commercial fish, have been well received and supported by the Alberta industry.

Approximately 6,500 sq. miles of water area yielded some 12,500,000 lb. of fish with a market value of $1,650,000 in the year ended Mar. 31, 1960. Whitefish is by far the most valuable; about 67 p.c. of this species taken during 1959-60 was exported to the United States. Expansion of domestic markets in recent years has resulted in a considerable drop in exports. Other commercially utilized fishes of Alberta in order of value to the fishery market are: walleye, northern pike, yellow perch, tullibee, lake trout, burbot and sucker. Although tullibee represent about 45 p.c. of the total catch, they are used primarily for animal food and so rank well below more desirable species in market value.

Research and management activities are being carried on in the fields of basic lake productivity, population structure and harvest, and age-growth studies on commercial species.

Sport Fishing.—The management of trout streams of the North Saskatchewan and South Saskatchewan river systems is being continued on an alternate year, open-and-closed basis. Surveys have shown that adequate harvests of trout are being realized by this type of management, while protection of breeding stocks, sufficient for natural reproduction, is afforded. Hatchery trout are being utilized almost exclusively for stocking lakes and beaver ponds where natural reproduction is limited or non-existent. There is no closed season on trout, except on streams requiring special regulations for management purposes. Minimum size limits have been removed on all game fish species in the province. Catch limits on trout and Arctic grayling have been reduced recently, while the catch limit on Rocky Mountain whitefish has been increased to encourage the harvest of this widely distributed species. The program of reclaiming lakes by use of commercial fish toxicants is being continued and an evaluation of one of these reclamation projects is being carried out with very encouraging results. Research pertaining to the survival of hatchery-reared trout in streams is also continuing at the provincial biological station at Gorge Creek.

British Columbia.—A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking, the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in the tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The Provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Net fishing in the non-tidal waters of the province, including commercial fishing, is regulated and administered by the Commercial Fisheries Branch, Department of Recreation and Conservation, and authority for regulation of the game fisheries in non-tidal waters is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for restocking purposes.

The shellfish laboratory at Ladysmith on Vancouver Island, formerly operated by the Department, was closed Dec. 31, 1958. The biological research into those species over which the province has control, principally oysters, clams and other forms of shellfish as well as marine plants, is now conducted by the Fisheries Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities as of Jan. 1, 1959. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

The Branch co-operates closely with the Fisheries Research Board of Canada.

Section 3.—Fishery Statistics

Subsection 1.—Primary Production

The Atlantic Coast fishermen experienced a most satisfactory year in 1959 both in quantity of fish landed and monetary returns. The value of the catch for the area, at $58,436,000, was the highest on record. While cod is normally the chief source of income for the fishermen, the landed value of $17,023,000 in 1959 was surpassed by a value of $17,387,000 for lobsters. Provincially, Nova Scotia was the most important for the year, having a catch valued at $27,112,000. This amount was 86.6 p.c. above the value of the Newfoundland catch; Newfoundland was in second place followed by New Brunswick, Prince Edward Island and Quebec in that order. Total landings in the area amounted to 1,331,058,000 lb., representing an 0.9-p.c. decrease from the five-year 1954-58 average of 1,343,483,000 lb. Although persistent shore ice prevented Newfoundland fishermen from setting their cod traps until mid-June, heavy runs of large cod arrived in the Gulf of St. Lawrence at about the same time with the result that landings of that species were the heaviest since 1954. The average unit value of the catch was $2.33 per hundred pounds, the highest return to the fishermen since 1952 when DBS records for landings in Newfoundland began.

In Nova Scotia, total landings were 9.6 p.c. lighter than in 1958 but higher unit prices for such important species as cod, haddock, pollock, small flatfish and lobster resulted in the returns to fishermen being over $2,000,000 greater, bringing the value of the catch to a record high. In terms of value, lobster was by far the most important species in 1959, outranking cod, the next most valuable species, by more than $4,900,000. Even so, the lobster catch was not unusually large, being less than 1 p.c. greater than the 1954-58 average of 20,909,000 lb. Landings of cod, unlike those of Newfoundland, were 3.6 p.c. lighter than those of 1958, making the catch the smallest in 20 years. The average price received by fishermen for cod was $3.75 per hundred pounds, an advance of 40 cents over 1958. Haddock came close to replacing cod as the second most important source of fishermen's income in 1959. The landed value at $3,956,000 was only $73,000 below that of the cod catch. The volume of herring taken during 1959, although 42.6 p.c. smaller than that of the previous year, was still about 5,000,000 lb. larger than the 1954-58 average.

In New Brunswick, lobsters made up about 38.6 p.c. of the total value of the 1959 catch, followed by herring with 22.0 p.c. and cod with 16.1 p.c. Landings of cod were the heaviest since 1918 when the Bureau's records began. Since 1953 there has been an almost continuous year-to-year increase in the landings of this species. The small flatfish have also played an increasingly important role in the New Brunswick fishery since 1950, following the introduction of small draggers.

Lobsters have been the most important source of income to Prince Edward Island fishermen for many years and 1959 was no exception. Of a total catch valued at $4,287,000, lobsters contributed $2,843,000 or about two-thirds.

The main species landed in Quebec, from both a quantity and a value standpoint, was cod. The 1959 catch, although 11.8 p.c. smaller than that of 1958, was well above the 1954-58 average of 62,081,000 lb. Herring is the second most important species in volume but the 26,787,000 lb. taken in 1959 was the smallest since 1924.

The lower British Columbia catch was attributable mainly to labour troubles in both the salmon and the herring fisheries. While sockeye, the most desirable canning species, were more plentiful than in any previous low period in their four-year cycle, fishermen were out on strike during most of the run. Fortunately the coho run was late and the fishermen were back on the boats in time to produce the largest pack of coho salmon since 1949. While the herring fleet was idle because of the strike during the summer and until Oct. 7, landings were so heavy during the remainder of the year that by the end of December 444,032,000 lb. had been taken.

1.—Quantity and Value of Sea and Inland Fish Landed, by Province, 1955-59

NOTE.—Figures for the years 1918-54 are given in previous editions of the Year Book beginning with the 1947 edition.

Province or Territory	1955	1956	1957	1958	1959p
			QUANTITY		
	'000 lb.	'000 lb.	'000 lb.	'000 lb.	'000 lb.

Subsection 2.—The Fish Processing Industry

The Census of Industry survey of the fish processing industry covers establishments engaged in the processing of fish at the secondary industrial level. Some fishermen process the fish they land to a certain degree but their operations are not included nor are the minor amounts of processing done in the inland areas (Ontario, the Prairie Provinces, and the Northwest Territories). In 1959, products of fish processing establishments had a selling value of $169,021,000, considerably lower than the value for the previous year. The East Coast fish plants contributed $94,499,000 and those of British Columbia $74,522,000.

[1] Includes establishments whose main activity was the handling of fresh fish or other products; such establishments are excluded in later years. [2] Not strictly comparable with later years; this figure applies to value of production while those for 1956-59 are value of sales or shipments.

The most important products of the fish processing industry are canned salmon for British Columbia and frozen fillets of groundfish for the Atlantic Coast. The greatly reduced sockeye catch in 1959 had its effect on the canned salmon output which dropped in value to $12,103,000 from a high of $41,240,000 in 1958. While part of the great decline in the sockeye output was counterbalanced by increases in other species, particularly coho, the total value of all species canned was down by 41.3 p.c. compared with 1958.

The frozen groundfish fillet production on the Atlantic Coast (packaged fillets and blocks) was 142,086,000 lb. in 1959 as against 134,398,000 lb. in 1958 and 128,206,000 lb. in 1957. This production has increased almost constantly from year to year in the past decade, the major factor in its more recent growth being the production of fish blocks. Frozen groundfish fillets and fish blocks produced on the Atlantic Coast were valued at $32,835,000 in 1959, which made up about 26.4 p.c. of the total value for the fish processing industry in the area. Other products of importance include dried salted fish, pickled fish, canned sardines and lobster products.

The value of all fishery products processed or handled in Canada by processors, handlers or fishermen during 1959 reached $205,298,000 for the sea and inland fisheries, 12.1 p.c. lower than the 1958 level of $233,659,000. While Atlantic Coast seafish products rose to $123,655,000 from $113,896,000, the value of British Columbia fishery products declined by 30.9 p.c. to $67,067,000 from $97,016,000 in 1958 and the value of inland fishery products to $18,161,000 from $20,609,000.

8.—Value of All Products of the Fisheries, by Province, 1955-59

NOTE.—Figures for the years 1917-54 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition. Totals for five-year intervals from 1870 are given in the 1956 edition, p. 597.

[1] Totals in this table differ from provincial totals because salted groundfish (except boneless) are based on sales rather than production; duplications for bloaters are also removed.

PART II.—FURS

Section 1.—The Fur Industry*

Several centuries of hunting and trapping have not seriously affected the capacity of Canada's stock of fur bearing animals to make a leading contribution to the world's requirements of furs of the highest quality. The rapid development of the country and the opening up of the western provinces during the latter part of the nineteenth and early twentieth centuries, together with improvements in transportation and subsequent settlement, caused the exhaustion of fur resources in the settled areas. More recently, the development of mining on a large scale over the Canadian Shield forced the trapper still farther northward. Nevertheless, the belt of Northern Canada extending across the Yukon and Northwest Territories, the northern parts of the Prairie Provinces, through northern Ontario and Quebec and into the Maritime Provinces and Newfoundland is one of the world's few remaining natural reserves for fine furs. It is quite probable that minerals and furs will continue to be the chief resources of this vast area as much of it is not suited to settlement or forest growth of commercial value.

It is realized that the fur wealth of the country is a very valuable asset, as it has been since the early days of settlement, and is capable of considerable development. Under well-planned conservation policies and by the imposition of closed seasons at appropriate times as well as by the establishment of natural preserves, the yield of wild fur is being maintained and even increased. On the other hand, the industry of fur farming is relatively new and much has still to be learned as to the best methods and techniques to be adopted. Yet its potentialities are such as to offer ample reward to those who are prepared to work steadily and intelligently toward the goal of raising animals with pelts at least equal to the best caught in their natural habitat.

The conservation of wild fur bearing animals is a matter coming under the jurisdiction of the respective provincial and territorial governments, although the Federal Government is also concerned with the conservation of fur and of all wildlife resources. The general policy with regard to the fur bearing animals follows two main lines—the regulation of the taking of animals by limitations of catch or closed season so as to prevent their extinction in districts where conditions provide a suitable habitat, and the provision of sanctuaries in strategic places to serve as reservoirs from which large areas of surrounding wild country may be restocked. Many of the most valuable fur bearing animals are subject to marked fluctuations in numbers. The periods of abundance and of scarcity recur with sufficient regularity to be called cycles. Such cycles have an important bearing upon the fur trade generally and more particularly upon the well-being of that large portion of the Indian and Eskimo population which depends upon fur trapping for much of its livelihood.

The fur industry contributes about $25,000,000 annually to Canada's export trade. About two-thirds of the total production of pelts goes outside the country, principally to the United States and the United Kingdom. Before World War II, the London market took about 80 p.c. of the total production of Canadian fox farms and also large quantities of every other kind of fur. However, when the War started, the London market was practically lost and other outlets had to be explored. United States fox breeders feared their market would be flooded with imported silver fox pelts and, at their request, a quota permitting the import of 58,000 units from Canada was instituted in the 1939-40 season, a unit consisting of a leg, head, tail or piece. Before the opening of the quota, United States interests came to Canada, purchased quantities of low-grade fox pelts and cut off the paws, heads and tails, thus making seven units from each fox. When the quota opened the pieces were shipped and the quota filled overnight, preventing the export of further silver fox that season. This situation was soon remedied, however, by the raising of the quota to 70,000 pelts. Since Canada's yearly production at that time was approximately 300,000 pelts, only the better grades were exported and the consequent competition had the effect of raising the quality of foxes produced.

---

* Prepared by W. M. Ritchie, Chief, Fur Inspection and Grading Services, Department of Agriculture, Ottawa.

During the 1930's, Norwegian agents came to Eastern Canada to purchase large numbers of live foxes and by 1939 Norway was marketing about twice Canada's production of fox pelts yearly. It was from one of the live animals purchased in Quebec that the platinum fox originated. Canada's registration system for pedigreed stock required the destruction of any fox showing white above the hocks—otherwise, Canadian breeders could have had the platinum fox years before. Norwegian breeders, not having a registration system, could retain any type of fox regardless of marking. It was in 1933 that the first platinum fox was born and from that animal the first litter was born in 1934. In January 1940, 400 Norwegian platinum fox pelts were offered for sale by auction in New York. The entire collection was sold for an average price of $548; the top price for one pelt was $11,000. The same pelt today would realize about $12.

By the end of the War the Scandinavian countries had accumulated over a million fox pelts and to market them they entered into compensation or barter deals with countries that before the War had purchased large quantities of Canadian fox pelts—France, Italy, Belgium and Holland. These compensation deals averaged about $7 a pelt; in Canada it cost approximately $30 to produce a fox. Currency restrictions, the lack of dollars and these barter deals were the main factors that brought about the downfall of the silver fox industry. Today Canada's annual production is about 2,000 pelts.

Because fur is a luxury item, highly international in character, the fur trade is particularly susceptible to world economic and political conditions. It was inevitable, then, that World War II and its aftermath would greatly disarrange the fur market and that the market would improve with the later upswing in world economic conditions. When the War began it was feared that the fur market would collapse as it had in 1914 when blanket beaver dropped to 75 cents a pelt and muskrat to five cents a pelt. But this did not happen—in fact the best market enjoyed during the war years was in the 1943-44 season when all furs, long-haired and short-haired alike, were in demand and the price received for red fox averaged $16, for fisher $70, lynx $50, marten $44, standard silver fox $33, platinum fox $70, blue fox $37, cross fox $21 and white fox $34, while the top price for beaver was $77.50. Although the countries that traditionally produced the most fur—the Soviet Union, the United States, Canada, the United Kingdom, China and Japan—retained their position in that respect, a new trend for the industry developed as a result of wartime economic complexities. The famous fur auction of Leipzig no longer played its important role of prewar days. Because the fur dealers of the world desired most of all to sell their pelts for dollars, New York City took on such importance as a market that it became in many respects the fur capital of the world.

In 1947 and 1948 the important prewar fur outlets in Europe were closed; those countries were spending their money rebuilding homes and factories. The other important outlet, the United States, provided a limited market since only the kinds of fur not domestically produced were imported. Nevertheless, producing countries abroad, needing dollars for reconstruction and for replacing worn-out equipment, flooded the New York market with furs. With this large accumulation of pelts being offered for sale and the unstable market throughout Europe, prices started to decline, reaching a low in the 1953-54 season when beaver averaged $10.57, fisher $17.50, lynx $3.62, marten $7.00, silver fox $8.00, platinum fox $9.75, blue fox $9.70, cross fox $1.87, red fox 78 cents and white fox $11.00. During this period, a number of countries with which Canada had been dealing during the war years imposed restrictions on imports of luxury commodities. Such luxury commodities included furs and, with currency restrictions, the marketing of pelts became quite a problem for the Canadian fur industry.

In comparatively recent years there has been a notable development in the fur ranching industry pioneered by Canada. The successful domestication of the silver fox, mink and other fur bearing animals of high pelt value has introduced a new and profitable branch of animal husbandry, which now accounts for about 62 p.c. of the value of Canada's animal fur pelt production. Capital investment in the 2,200 fur farms, including the fur bearing animals, land and buildings, amounts to approximately $40,000,000. The value of the 5,370,580 pelts marketed in the 1958-59 season, the latest for which complete figures are available, was $25,801,395, of which wildlife pelts caught in their native habitat accounted for $9,707,035 and pelts raised on fur farms for $16,094,360.

Fur farming is carried on in all provinces. An experimental fox ranch operated by the federal Department of Agriculture at Summerside in Prince Edward Island specializes in the breeding, feeding, housing and general care of fox and mink. Although the fox was the first type to be raised in captivity, many other kinds of fur bearing animals are now being raised—mink, marten, fisher, rabbit and chinchilla.

Mink farms are by far the most numerous. Not only are the fur farms producing the original dark brown mink but, through a number of mutations that have occurred genetically, mink is being offered in many colours that are readily accepted on the markets of the world. These mutations, which have occurred over the past twenty years in great variety, and especially during the past five years, run the gamut from dark to light shades in Silverblu, Pastel (honey-brown), Aleutian (gunmetal with bluish aspects), Sapphire (metallic blue) and pure White or almost pure White. Of course, there is a whole variety of dilutions or concentrations of these various colours which puzzle even the expert breeder, and not all colours are desirable or marketable. There have been several mutations which were quite strong-furred but which produced awkward colour patterns, such as the Koh-i-nur (essentially a black-and-white animal with the black, in the best instances, in the form of a cross) and the so-called Blue-Frost type (a dark mink with some silver hairs and with a lighter under-fur). These types were difficult to match in coat-making and lack of enthusiasm among buyers brought prices down and soon made their production unprofitable. However, some of the factors in different settings proved valuable. The Blue-Frost inheritance, when transferred to the Silverblu and to the Sapphire, became known as Breath-of-Spring. It was a silvering and paling of an already silver-bluish fur which became quite desirable to the trade and therefore higher priced than the plain Silverblu and plain Sapphire. The Koh-i-nur mink, by continual selection, eliminated most of the black and became the White mink. It might have a black tail or a few very small black spots on its head but, because both of these appendages are dispensed with in making a coat, it is treated as a pure White mink and the prices have been exceptionally high.

During the ten years 1951-60, the fur market was dominated by ranch-raised mink and long-haired furs were very much neglected. In 1951, the world mink crop was estimated at 3,500,000 pelts and the market opened with prices on all types 20 to 40 p.c. higher than the opening prices of the previous year. Some of the highs obtained in New York were $128 for Aleutian, $105 for White, $98 for Breath-of-Spring, $86 for Royal Pastel and $64 for Standard. The first sale of Sapphire mink was made in 1957, the top bundle selling for $350 a skin. This was the highest amount ever paid for ranch mink. In 1952-54, prices were much easier than in 1951 and then in 1955, partly because there was no carryover from the previous season, the average price of all mink sold went up to $26.28. The first sale of Winterblu was made that year, the top lot bringing $340 per pelt. In 1956, there was an active demand for all types and opening prices were 5 to 10 p.c. higher than early sales the previous year. In 1957-59, prices of dark mink advanced from 33 to 45 p.c. over 1956 prices as a result of increased demand for that type and lower production. In 1960, production of ranch mink throughout the world continued to increase. Contrary to predictions, the estimated world crop of 12,500,000 pelts, through the combination of higher production and foreign imports, did not bring about a drop in prices. An upsurge in the popularity of fur-trimmed garments and millinery created an expanded market for mink which absorbed most of the increase and left few pelts on the market at the end of the season.

It may be interesting to dispel the popular misconception that the cost of producing a mink is but little and the realization from these pelts is high by mentioning some of the numerous problems confronting the Canadian rancher. During the past fifteen years the cost of feed has risen rapidly and is continuing to do so. For example, horsemeat is a vital part of the mink diet. Not many years ago, the rancher paid as little as $5 for a horse that had outlived its usefulness and sold the hide for the same amount, so that his only expense was in the processing. Today, the average cost of a horse is $70 and the rancher gets about $6 for the hide. By the pound, horsemeat costs about 14 cents. Other food costs—cereal, liver, etc.—have about quadrupled in four years. Prices of other materials such as wire for pens, and refrigerator units are estimated to have quadrupled in the past ten to fifteen years. Labour costs are much higher than they were. The total cost of producing a mink in 1932 was about $5, by 1942 it had risen to about $8 and today it is estimated to be $15 to $16. When it cost $5 to raise a mink, the average selling price was not much above that figure. At today's estimated production cost, many ranchers lose money on their standard mink and must make up the loss on sales of male animals and mutations.

In the early postwar years, the industry and the Government alike recognized the need for initiating some promotional activities to bolster the sale of Canadian furs abroad. At a meeting of fox and mink breeders and government officials in Ottawa in 1947, the Federal Government agreed to sponsor a fur exhibit at the Fur and Leather Fair to be held in Basle, Switzerland, in the spring of 1948—Switzerland being the only country in Europe at the time that had dollars to spend. This exhibit was a co-operative effort. The Department of Agriculture was in charge of the display but all arrangements were made by the Department of Trade and Commerce and the fur collection was lent by the fur organizations and members of the industry. In the years since then, displays of furs have been prepared for international trade fairs at Paris, London, Milan, Brussels, Basle and Lausanne. In June 1960, a successful two-day Canadian fur and fashion show was held in Brussels, the first enterprise of this kind to be attempted. Moreover, the Canadian exhibits at the Paris and Brussels International Trade Fairs that year were devoted almost exclusively to furs.

Other Federal Government departments have given valuable assistance in the fur displays abroad for various reasons. The Department of Northern Affairs and National Resources, which is responsible for the welfare of Canadian Eskimos, is most anxious to secure a wider market for Canadian Arctic fox and thereby bring more revenue to this small but important segment of the population. Accordingly, the Department provided a number of choice pelts which were fashioned by craftsmen into an extraordinarily beautiful evening cloak. The cloak was a feature presentation in the 1960 fur displays and received much attention in European fashion magazines. The Department also provided pelts for the manufacture of a handsome marten cape, also featured in the European displays. The Indian Affairs Branch of the Department of Citizenship and Immigration is interested in helping Indian trappers to increase their income and, in conjunction with the Department of Trade and Commerce, has arranged for advertisements of Canadian beaver, in full colour, to be placed in leading fashion magazines of Germany, France and Italy. In most of these promotional efforts, it has been the function of the Department of Agriculture to plan and co-ordinate the arrangements. Recently the fur business itself has taken an increasing interest in advertising in other countries. The Canadian Mink Breeders in 1960 carried out an attractive promotional effort in Peru and Mexico with a view to stimulating interest in Canadian furs in those countries. By arrangement with Canadian Pacific Air Lines, Limited and a Montreal department store, a valuable collection of furs was shown in Lima and Mexico City. Efforts of this nature are an indication of maturity and a healthy, forward-looking condition within the industry.

The concentrated attention on promotional advertising in other countries has two closely connected objectives—to establish Canada's reputation as a major source of high quality furs and, by so doing, to attract increasing numbers of foreign buyers to Canadian fur auctions. It is particularly encouraging, therefore, to note that 118 European buyers from nine countries came to the first large sales in 1960, roughly double the number attending the previous year. While the Government has concentrated on building up the market in Europe, fur displays at fairs on that Continent have had some effect on sales to the United States. Several leading department stores in the southern States have been in communication with the Canadian Trade Commissioner in New Orleans with a view to presenting Canadian furs and fashions. Exports of raw and dressed furs in 1958 were approximately $2,000,000 higher than those of 1957, and exports in 1959 were about $1,200,000 above those of 1958. It seems reasonable to assume that part of this increase can be attributed to promotional effort.

Section 2.—Provincial and Territorial Fur Resources and Management

As stated in Section 1, most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, and the fur resources of the Yukon Territory and the Northwest Territories, all of which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources (see pp. 39-41) is responsible for all Federal Government interests in wildlife resources except for those activities closely related to Indian affairs. The service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems.

Detailed descriptions of provincial and territorial fur resources and management activities are given in the 1957-58 Year Book, pp. 616-622.

Section 3.—Fur Statistics

Subsection 1.—Production of Furs*

Total Fur Production.—Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production. For a number of years the statistics were based on information supplied by the licensed fur trappers. More recently annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur dealers in that province.

---

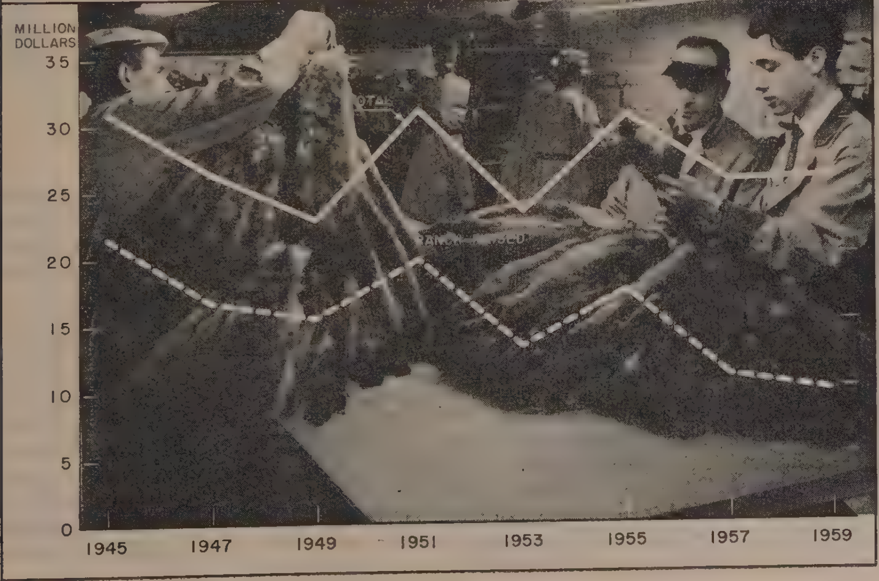
VALUE OF FUR PELTS TAKEN IN THE WILD
AND RANCH-RAISED, YEARS ENDED JUNE 30, 1945-59



The total number of pelts taken during 1959-60 was 6,000,298, 12 p.c. more than in the previous year. The value of pelts taken increased even more markedly to $31,203,451, which is an increase of 21 p.c. The ten principal kinds of pelts taken according to their value were: 1,054,741 ranch mink pelts valued at $18,715,582; 344,766 beaver pelts at $4,732,573; 169,631 wild mink pelts at $2,948,404; 1,562,617 muskrat pelts at $1,303,661; 2,241,771 squirrel pelts at $1,032,937; 40,408 lynx pelts at $704,613; 15,296 otter pelts at $384,953; 14,457 white fox pelts at $353,366; 276,111 ermine pelts at $268,612 and 29,226 marten pelts at $194,374. These types accounted for 98.2 p.c. of the total value of pelts produced.

Fur Farm Production.—Fur bearing animals were first raised in Canada on farms in Prince Edward Island about 1887 and in Quebec in 1898; today fur farming is carried on in all the provinces. In 1959 mink accounted for 92 p.c. of the total fur bearing animals on farms and chinchilla for 6 p.c. Small numbers of raccoon, marten, fisher, fitch, nutria and others are also reared.

There was a slow and steady increase in the number of farms until 1920 when 587 were reported, followed by a period of more rapid growth to 1938 when the number reached 10,454 with a production value of $6,500,000. During the war years many fur farms went out of production and although prices rose considerably after the War, operating costs increased and the number of fur farms, particularly those conducted in conjunction with other farming operations, continued to decrease. By 1959 only 2,458 farms reported but the value of their production was $18,843,000. Although there were 114 fewer farms in 1959 than in 1958, the number of animals on such farms increased from 500,774 to 538,826 and the number of pelts taken from 993,133 to 1,066,705. Fox pelts continued to decline but there were 71,958 more mink pelts sold in 1959 than in 1958. Chinchilla also showed an increase from 8,336 to 8,558.

Ontario was the leading province in the value of mink produced in 1959 with 284,740 pelts valued at $5,115,685. British Columbia was in second place with 225,829 pelts valued at $4,085,458, followed by Manitoba with 205,313 pelts at $3,514,006; Alberta, 135,343 at $2,684,500; Saskatchewan, 74,654 at $1,192,669; and Quebec, 57,506 at $1,008,673. In each of the other provinces the value of mink production was under $1,000,000.

Subsection 2.—Marketing of Furs

Montreal, Que., is the leading Canadian fur mart although auction sales are also held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., Winnipeg, Man., and North Bay, Ont. The Saskatchewan Government maintains a Fur Marketing Service at Regina to assist producers in that province.

Grading.—The grading of furs to secure uniformity was introduced in 1939 by the federal Department of Agriculture so that furs may be purchased by grade without the necessity of buyers from other countries personally examining the pelts. Grading offers many advantages to the producer as well as to the trade in general. It educates the rancher as to the proper value of his pelts and creates an incentive to improve the quality of the product; it furnishes guidance in the planning of future matings, aids in raising the standard of quality of the entire crop of pelts and helps in advancing the level of prices for high-quality pelts.

Exports and Imports.—The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being the most valuable followed by beaver, fox, muskrat and squirrel. Furs such as Persian lamb, mink, certain types of muskrat, fox, raccoon, Kolinsky, and sheep and lamb make up the major portion of the imports.

Exports and imports of all furs to and from the United States, the United Kingdom and all countries are given for the years 1958 and 1959 in Table 7.

Subsection 3.—The Fur Processing Industry*

The rather general term 'fur processing' includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

In 1959 the number of skins treated was 7,294,823, of which muskrat comprised 49 p.c., Persian and other types of lamb 11 p.c., mink 18 p.c., squirrel 5 p.c. and rabbit 3 p.c.

---

* Prepared in the Industry and Merchandising Division, Dominion Bureau of Statistics.

Subsection 5. The Manufactures of British Columbia	677
SECTION 2. MANUFACTURING INDUSTRIES IN URBAN CENTRES	678

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing in Canada in three Parts. Part I reviews the manufacturing situation during 1959. Part II provides general statistical analyses including manufacturing statistics from 1917; detailed treatment of production under various groupings and individual industries; and principal factors in manufacturing production such as capital expenditures and size of establishment. Part III deals with the provincial and local distribution of manufacturing production.

Figures for 1959 were available at the time of going to press for most of the tables of Part II, although certain analyses, such as principal commodities produced and manufactures classified by origin and type of ownership, were not yet complete and 1958 is given as the latest year. Similarly, 1958 is the latest year for all provincial and municipal analyses contained in Part III.

PART I.—REVIEW OF MANUFACTURING

Canada is no longer on the fringes of industrialization but ranks among the world's most important manufacturing countries. The rate of expansion throughout the years has been phenomenal but in the past generation alone Canada has changed from a country producing and exporting mainly primary products to one that is increasingly producing and exporting manufactured goods. Today, manufactures account for about 26 p.c. of the value of all goods and services produced and employ a like percentage of the total labour force. An outline of this development, particularly during the postwar period, is given in the 1960 Year Book (pp. 657-660) together with a more detailed review of the manufacturing situation in 1957-58 when a moderate recession changed the pattern of growth.

In 1959, manufacturing production recovered from that recession. Selling value of factory shipments at $23,311,601,481, value added by manufacture at $10,320,962,881 and salaries and wages paid at $5,073,073,706 were all the highest on record. The number of employees was also higher in 1959 than in 1958 but fell short of the record attained in 1957 by 4.1 p.c. It is of interest to note that the value added by manufacture, which is the real measure of manufacturing production, was over the $10,000,000,000-mark for the first time in 1959.

Compared with 1958, the value of factory shipments in 1959 increased 5.2 p.c., salaries and wages 5.6 p.c., value added by manufacture 5.4 p.c. and volume of production 6.6 p.c. The latter advance was accomplished with an increase of only 1.1 p.c. in the number of persons employed, continuing the trend of recent years for the same volume of output to be produced with fewer employees. Since 1949 the physical volume of manufactured products increased 50.0 p.c. and the number of persons employed only 11.3 p.c. The increase in salaries and wages paid in 1959 resulted partly from the greater number of employees and partly from the continuing advance in earnings, a trend common to all other sectors of the economy.

An important factor in the recovery that took place during 1959 was the continued high spending on capital goods such as construction and machinery and equipment of all kinds. Total investment in capital goods amounted to $8,411,000,000, an increase of $47,000,000 over 1958. However, spending on machinery and equipment was $79,000,000 higher and spending on construction projects $32,000,000 lower, which had the effect of stimulating industries producing electrical and other machinery but moderately depressing industries producing building materials; in the case of the lumber industry, however, an increase in exports of planks and boards and veneer and plywood counterbalanced a decline in domestic spending for construction purposes, resulting in a net increase of 3.5 p.c. in the volume of wood products manufactured. Another stimulating factor in 1959 was the impact on the consumer goods industries of the increase of about 394,000 in population, with a continuing rise in wages, salaries and supplementary labour income.

Export demand for Canadian manufactured products was another strong factor in stimulating the 1959 recovery. Exports of partly manufactured products at $1,453,900,000 were $138,400,000 higher than in 1958 and exports of fully manufactured goods at $1,860,600,000 were $84,100,000 higher. The increase in exports of both partly and fully manufactured products amounted to 7.2 p.c. There were substantial improvements in exports of pulp, veneer and plywood, newsprint, whisky, farm implements and machinery, nickel, copper and its products, crude artificial abrasives, and synthetic rubber and plastic manufactures. Moderate increases were reported for timber and lumber, aluminum and its products, fertilizers, lead and its products, non-farm machinery and uranium ores and concentrates. At the same time, declines occurred in a number of major export items including red cedar shingles, wheat flour, zinc, automobile parts and aircraft. The decline in exports of aircraft was particularly sharp, from $109,112,783 in 1958 to $24,960,067 in 1959, the result of a 25-p.c. drop in the volume of output of the aircraft industry.

As already mentioned, the physical volume of production for manufacturing as a whole reached an all-time high in 1959, increasing 6.6 p.c. after a drop of 1.5 p.c. in 1958 and of 1.5 p.c. in 1957. Durable goods rose 6.9 p.c. and non-durable goods 6.4 p.c. Since the non-durable goods industries were not affected by the downturn in production in 1958, the rising volume of 1959 advanced these industries to almost the same level as durable goods; in 1957 the indexes for non-durable and durable goods were 139.7 and 146.7, respectively, while in 1959 they were about the same—150.4 and 149.5. The total index for manufacturing in 1959 was 150.0. In the years since the end of the Second World War the durable goods industries experienced an almost uninterrupted expansion in volume of production, the only exceptions being 1954, 1957 and 1958. Despite steady postwar expansion, the non-durable goods sector recorded an increase in volume of only 54 p.c. between 1946 and 1956 while durable goods increased 92 p.c. This gap was narrowed between 1957 and 1959 so that for the whole period of 1946-59 durable goods expanded 87 p.c. and non-durable goods 67 p.c.

All non-durable goods industries except clothing operated at higher levels in 1959. Rubber goods industries increased 17.4 p.c., textiles 13.2 p.c., products of petroleum and coal 11.4 p.c., miscellaneous industries 10.2 p.c. and increases in the other groups (see

Table 7) ranged from 7.6 p.c. for paper and paper products to 3.5 p.c. for foods. Clothing decreased 1.1 p.c. Similarly, all durable goods industries, with the exception of transportation equipment, reported increased volume. Iron and steel products recorded the highest gain of 14.7 p.c. followed by non-metallic mineral products with an increase of 8.4 p.c., non-ferrous metal products 6.3 p.c., electrical apparatus and supplies 4.9 p.c. and wood products 3.5 p.c. The increased volume of the wood and non-metallic mineral products groups reflected an active construction industry. The primary iron and steel industry, which is an important component of the iron and steel group, registered a gain in volume of 37.7 p.c.

The drop in the transportation equipment group as a whole was only 0.8 p.c. and was the over-all result of mixed trends in the various industries composing the group. The motor vehicle parts industry increased 17.1 p.c. in volume, the motor vehicle industry 7.4 p.c., and the shipbuilding industry a fractional amount. On the other hand, the aircraft and railway rolling-stock industries declined 24.7 p.c. and 14.5 p.c., respectively, the former resulting partly from lower export shipments.

The improvement in manufacturing production in 1959 was not the same for all provinces. Perhaps the most outstanding feature was the continued expansion in manufacturing employment in Saskatchewan, which increased 2.1 p.c. in 1959 after an increase of 2.3 p.c. in 1958 when all other provinces reported declines. The three Prairie Provinces as a unit achieved the greatest expansion in employment with an increase of 2.9 p.c. Ontario came second with an increase of 1.5 p.c., followed by British Columbia with 0.9 p.c. and Quebec with 0.4 p.c. The Atlantic Provinces reported a drop of 0.8 p.c. in employment, mainly because of the failure of Nova Scotia to share in the expansion common to the remainder of Canada in varying degrees. Despite the great industrial progress made by other provinces, Ontario continued to maintain its predominance and in 1959 accounted for 50.0 p.c. of the total value of factory shipments in Canada, compared with 49.0 p.c. in 1958. Quebec was second with 29.7 p.c. of the total compared with 30.5 p.c. in 1958, and British Columbia third with 8.0 p.c. compared with 8.1 p.c. in 1958.

PART II.—STATISTICS OF MANUFACTURING

Section 1.—Growth of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, though numerous changes have since been made in the information collected and in the treatment of the data, an effort has been made to carry all major revisions back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The Bureau of Statistics in 1952 changed its policy with regard to the collection of statistics on the production of manufactured goods. Firms in several industries where year-end inventory changes were known to be insignificant were requested to report value of shipments f.o.b. plant instead of gross value of products. Under the "value of products" concept, establishments were asked to report the factory selling value of the products made whether sold or not, the unsold portion being assigned the average selling value of similar articles sold during the year. Under the "selling value of shipments" concept, establishments are required to report their sales during the year regardless of when the products were made, an item usually readily available from the firms' records. The changeover was made in order to ease the burden of reporting for the majority of manufacturing establishments. The value of shipments concept for small and medium sized establishments is more realistic and more readily obtainable from their accounting records, whereas the value of products made, for firms not recording such information, must be derived from special calculations.

1.—Summary Statistics of Manufactures, 1917-59

NOTE.—Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a comparable basis to the series given below. Statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

Year	Establishments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture[1]	Gross Value of Products[2]
	No.	No.	$	$	$	$
1917	21,845	606,523	497,801,844	1,539,678,811	1,281,131,980	2,820,810,791
1918	21,777	602,179	567,991,171	1,827,631,548	1,399,794,849	3,227,426,397

---

[1] For 1924-51, inclusive, the value added by manufacture is computed by subtracting cost of fuel, electricity and materials from gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available.

[2] In 1952 gross value of products was replaced by selling value of factory shipments; see text immediately preceding this table.

[3] A change in the method of computing the number of employees in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted.

[4] Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included.

Provincial distribution of manufactures for certain years from 1917-59 is given in Table 2.

2.—Summary Statistics of Manufactures, by Province, Certain Years 1917-59

Province and Year	Establishments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture[1]	Gross Value of Products[2]

---

[1] See footnote 1, Table 1, p. 632. [2] In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 631. [3] Excludes figures for the fish processing industry which are not available for 1949. [4] See footnote 3, Table 1, p. 632. [5] Includes Yukon Territory.

The figures in Table **3** trace the tendencies in manufacturing industries as clearly as possible from 1917 to 1959. In analysing statistics of production and materials used, price changes should be borne in mind, particularly the inflation of values in the years immediately following World War I, the drop in prices of commodities during the depressions following 1921 and 1930, and the increases again in World War II and the postwar period.

---

[1] A change in the method of computing the number of production workers in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was therefore a proportionate reduction in the averages for 1925-30 per employee as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are therefore comparable with those for 1924 and earlier years.

[2] Net value of products; see footnote 1, Table 1, p. 632.

[3] In 1952 gross value of products was replaced by value of factory shipments; see text on p. 631.

Subsection 1.—Consumption of Manufactured Products*

The value of all manufactured commodities made available for consumption in 1958 was $23,130,592,757, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured goods and deducting the value of the exports. More accurate statistics could be presented were it possible to exclude from the value of factory shipments the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, wood and paper, animal, non-ferrous metals and non-metallic minerals were, in that order, the leading groups in the value of finished products made available for consumption in 1958. The decrease of 1.4 p.c. in the total value of manufactured products available for consumption in 1958 from the 1957 total was attributable mainly to lower production and lower imports of iron and its products and of non-ferrous metal products.

Wood and paper, animal, and non-ferrous metal products are manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups. Canada in the past imported large quantities of iron and steel, textiles, chemicals and non-metallic mineral products despite large home production. However, the recent expansion of the iron and steel, chemical and non-metallic mineral products industries is enabling Canada to meet a greater proportion of the domestic requirements.

In Table 4, showing consumption of manufactured products, the component material classification is still used to agree with the classification used for imports and exports. The standard industrial classification grouping used elsewhere throughout this Chapter will be adopted for trade statistics beginning with 1961.

Totals, 1958	**22,163,186,308**	**4,046,816,666**	**3,079,410,217**	**23,130,592,757**

[1] In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 631.
[2] Figures for the years 1929 and 1933 are for the fiscal years ended Mar. 31 of the following years; 1939-58 figures are for the calendar year. Net imports are total imports less foreign products re-exported.
[3] Not comparable with previous years since certain items formerly included are no longer considered as merchandise trade; these exclusions dropped about $30,000,000 from the production value, $150,000,000 from the value of imports, and thus $120,000,000 from the available-for-consumption value.

Subsection 2.—Value and Volume of Manufactured Production

Value of Manufactured Production.—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind. In recent years, owing to great changes in prices, unadjusted value series used in isolation have become increasingly inadequate as indicators of economic trends. Consequently, interest has shifted to measures of volume. The range of prices since 1929, on the base period 1935-39 = 100, is as follows:—

Year	*General Wholesale Price Index*	*Price Index of Fully or Chiefly Manufactured Products*
1929	124.6	123.7
1933	87.4	93.3
1939	99.2	101.9
1944	130.6	129.1
1946	138.9	138.0
1949	198.3	199.2
1953	220.7	228.8
1955	218.9	224.5
1956	225.6	231.5
1957	227.4	237.9
1958	227.8	238.3
1959	230.6	241.6

Volume of Manufactured Production.—Real income is ultimately measured in goods and services so that the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services and not whether they are expending more dollars and cents.

During the past few years the Dominion Bureau of Statistics has been engaged in the reconstruction of the index of industrial production* which was first published in 1926 and later subjected to several major revisions. The latest reconstruction was made possible by the availability of a great deal of basic data. Annual statistics valuable for this project have been collected by the Bureau from the end of World War I to the present and the scope of the monthly information has been greatly expanded. Applying methods developed through the experience of the past quarter-century, it has been possible to compute an index with a fair measure of accuracy from 1935 to the present.

The manufacturing sector is divided at the major group level into durable manufactures and non-durable manufactures. The movement of durable goods normally varies from that of non-durables; there tends to be greater fluctuation in durables from prosperity to depression and the demand for non-durables is more constant.

---

* For a description of the methods used in constructing the index and a description of its scope, see DBS publication *Revised Index of Industrial Production, 1935-1957* (Catalogue No. 61-502).

5.—Index of the Total Volume of Manufactured Production classified on the Basis of Durable and Non-durable Goods, 1935-59

(1949=100)

Year	Durable Manufactures	Non-durable Manufactures	All Manufactures
1935	32.7	44.1	39.0
1936	36.9	48.1	43.0
1937	44.9	52.8	49.2
1938	40.9	49.0	45.3
1939	42.7	53.7	48.7
1940	59.3	61.6	60.4
1941	85.8	73.7	78.7
1942	112.1	84.3	96.1
1943	128.2	85.9	104.0
1944	128.3	89.5	106.1
1945	99.8	88.2	92.9
1946	79.9	89.8	85.2
1947	93.3	93.2	93.2
1948	98.4	96.3	97.3
1949	100.0	100.0	100.0
1950	106.5	106.0	106.2
1951	119.9	110.8	115.0
1952	124.8	113.2	118.5
1953	133.6	120.2	126.4
1954	124.8	121.2	122.9
1955	139.7	130.4	134.7
1956	153.3	138.1	145.1
1957	146.7	139.7	142.9
1958	139.9	141.3	140.7
1959	149.5	150.4	150.0

The period 1947-56 was characterized by unprecedented industrial expansion. The end of hostilities in 1945 and the subsequent reconversion to peacetime production were attended by declines in output but the upward trend was resumed in 1947. The rate of advance slackened moderately in 1948 and 1949 but regained most of its 1947 impetus in 1950 when the outbreak of hostilities in Korea resulted in heavy anticipatory buying on the part of consumers and in growing expenditures for national defence. By 1952 the index of the volume of manufacturing production at 118.5 had surpassed the record wartime level of 106.1 established in 1944. The index continued to advance in 1953, dropped somewhat in 1954 but moved upward again to a new high of 145.1 in 1956. Then, as a result of the minor recession which began in the autumn of 1957, the index for that year slipped to 142.9 and for 1958 to 140.7. The 1959 index stood at 150.0, the highest point on record.

Durable Manufactures.—Over the decade ended in 1959, the volume index of durable manufacturing output increased to a level of 149.5. With the exception of production cutbacks in 1954 and 1957-58, the advance was steady. In 1959, total durable manufacturing output increased by 7 p.c. over 1958, all major groups recording substantial increases during the year with the exception of transportation equipment, which was off marginally.

Of the six major durable groups, the only one to register an uninterrupted, almost spectacular advance was non-metallic mineral products. By 1959, this group had attained a level of 223.2. The steady increase over the years was associated with the growth in construction activity, this group producing mainly building materials such as concrete and concrete products, glass products, etc. The electrical apparatus and supplies group reached an index level of 184.8 in 1959, largely the result of sizable production advances in telecommunication equipment and refrigerators and appliances. Each of the other durable groups increased substantially during the decade.

6.—Indexes of the Volume of Manufactured Production of the Groups Comprised within the Durable Manufactures Classification, 1935-59

(1949=100)

Year	Wood Products	Iron and Steel Products	Transportation Equipment	Non-ferrous Metal Products	Electrical Apparatus and Supplies	Non-metallic Mineral Products
1935	42.3	29.2	34.2	40.1	22.9	24.6
1936	47.5	33.8	35.5	46.7	25.0	29.8
1937	53.6	42.9	43.4	54.4	32.5	38.2
1938	50.7	36.6	38.1	55.8	28.0	34.3
1939	54.0	39.1	37.7	58.4	28.4	35.7
1940	65.5	58.9	61.1	70.5	41.9	45.0
1941	74.5	86.4	106.1	98.9	61.8	60.1
1942	77.4	114.7	157.1	130.4	74.9	68.2
1943	73.6	131.6	198.4	145.6	85.0	68.8
1944	76.1	118.4	235.7	130.9	85.5	66.8
1945	77.2	96.3	157.0	98.8	70.7	63.7
1946	86.8	80.8	80.6	81.8	67.7	72.0
1947	98.2	93.6	95.3	89.6	89.6	86.3
1948	100.6	101.5	97.2	99.2	91.5	92.2
1949	100.0	100.0	100.0	100.0	100.0	100.0
1950	108.2	102.5	108.3	104.0	112.5	111.0
1951	114.8	117.0	131.3	114.1	120.7	119.8
1952	115.8	118.9	149.1	112.2	124.5	122.8
1953	125.4	115.3	165.2	120.1	150.9	139.2
1954	124.2	106.2	137.3	117.0	151.7	146.1
1955	136.4	123.8	145.1	127.5	176.2	171.1
1956	138.3	145.3	157.9	133.0	191.3	191.5
1957	127.3	139.6	151.2	127.6	183.6	191.3
1958	132.0	128.3	132.5	126.7	176.2	205.9
1959	136.6	147.2	131.5	134.7	184.8	223.2

Non-durable Manufactures.—The non-durable manufacturing group as a whole increased steadily during the postwar period, although the advances were of a relatively minor nature during both the 1954 and 1957-58 recessions. By 1959, the total non-durable index reached a high point of 150.4, increasing about 6 p.c. over 1958. During the year, 11 of the 12 main non-durable components advanced, the only exception being clothing products which was down by about 1 p.c. Increases ranged from about 4 p.c. in both foods and tobacco products to 17 p.c. in rubber products. Leather products and chemicals were up 5 p.c., beverages and printing and publishing 7 p.c., paper products 8 p.c., products of petroleum and coal 11 p.c., and textiles 13 p.c.

7.—Indexes of the Volume of Manufactured Production of the Groups Comprised within the Non-durable Manufactures Classification, 1935-59

(1949=100)

Year	Foods	Beverages	Tobacco and Tobacco Products	Rubber and Rubber Products	Leather Products	Textiles
1935	51.2	27.1	31.1	49.8	70.8	49.7
1936	56.6	32.1	35.7	54.5	71.1	55.5

[1] Includes knitting mills.

Section 2.—Manufactured Production Variously Classified

Subsection 1.—Manufactures classified by Industrial Groups and Individual Industries

The general review at pp. 629-631 outlines trends in manufacturing production during 1959. The tables of this Subsection give detailed statistics on which those trends are based. Table **8** shows the percentage variations between 1957 and 1958 and between 1958 and 1959 in number of employees, their salaries and wages and the value of goods produced in the main industrial groups; Table **9** gives comparative summary statistics for the period 1947-59; Table **10** contains the details of establishments, employment and output for the individual industries within the major groupings for the years 1958 and 1959; and Table **11** shows quantities and values of principal commodities produced in 1958—figures for 1959 were not available at time of going to press.

8.—Percentage Variations in Employment, Salaries and Wages and Selling Value of Factory Shipments in the Main Industrial Groups, 1958 Compared with 1957, and 1959 Compared with 1958.

Industrial Group	1958 Compared with 1957			1959 Compared with 1958		
	Number of Employees	Salaries and Wages	Selling Value of Factory Shipments	Number of Employees	Salaries and Wages	Selling Value of Factory Shipments
	p.c.	p.c.	p.c.	p.c.	p.c.	p.c.
Foods and beverages	− 0.9	+ 5.6	+ 8.6	+ 0.9	+ 6.3	+ 3.2
Tobacco and tobacco products	+ 4.2	+11.5	+22.2	− 0.3	+ 2.5	+ 6.4

[1] Not comparable with published figures on shipments which show a drop of 13.5 p.c. A change in the method of valuing shipments in 1959 resulted in lower unit values being reported.

9.—Summary Statistics of Manufactures, by Industrial Group, 1947-59

NOTE.—Figures for 1946, 1948 and 1950 will be found in the 1952-53 Year Book, pp. 611-613; those for 1952 in the 1955 edition, pp. 645-647; for 1953 in the 1956 edition, pp. 636-638; for 1954 in the 1957-58 edition, pp. 644-645; and for 1956 in the 1960 edition, pp. 671-673.

1959	1,563	37,886	131,381,678	185,235,197	246,238,538	432,428,521

---

[1] In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 631.

[2] Reported on a production basis. Figure for 1959 not exactly comparable with 1958 because of a change in the method of valuation; if 1958 method had been used, 1959 shipments would have totalled approximately $1,425,051,000.

Detailed Statistics by Group and Individual Industries.—Table **10** presents detailed statistics for 1958 and 1959 regarding the individual industries under which all industrial plants in Canada are classified. The industries are assembled under 17 main groups according to the Standard Industrial Classification.

In interpreting the statistics of individual industries it should be noted that the figures on employment, production, etc., do not refer to individual products but to all the products produced by an industry. For example, the value of production of the confectionery industry amounting to $136,555,219 in 1959 does not imply that this was the value of confectionery produced. What it means is that the firms whose principal product was confectionery had a value of production of $136,555,219. This figure, in addition to confectionery, includes all the subsidiary products made by these firms, such as chewing gum valued at $12,391,497, ice cream valued at $4,081,610, and bread and other bakery products valued at $1,051,477. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. The quantities and values of the principal individual commodities produced in 1958 are given in Table **11** (1959 not available at time of going to press). Commodities produced in small quantities are not included, but the list covers approximately 75 p.c. of total production.

10.—Principal Statistics of Individual Manufacturing Industries, 1958 and 1959

---

[1] Reported on a production basis.

[2] Figure for 1959 not exactly comparable with 1958 because of a change in the method of valuation; if 1958 method had been used, 1959 shipments would have totalled approximately $1,425,051,000.

Subsection 2.—Manufactures classified by Origin of Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

12.—Principal Statistics of Manufacturing Industries classified according to Origin of Materials Used, by Main Group, 1958

Origin of Materials Used	Establishments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value added by Manufacture	Selling Value of Factory Shipments
	No.	No.	$	$	$	$
Farm origin	9,862	310,977	980,342,923	3,716,401,997	2,177,421,498	5,972,728,027

Subsection 3.—Manufactures classified by Type of Ownership

Figures showing the classification of the type of ownership under which Canadian manufacturers operate are available from 1946. Although the first survey did not include the fish curing and packing industry, its inclusion in subsequent years has not materially altered the percentage distribution of individual ownership, incorporated companies, etc.

As is to be expected, the smaller establishments, regardless of the type of product manufactured, are carried on under individual ownership. In that category, industries conducted on a small scale contain a large number of establishments, the percentage decreasing as the scale of operations increases, as shown for 1958 in Table **13**.

13.—Percentage Distribution of Manufacturing Establishments, Employees and Shipments, by Type of Ownership and Size of Establishment, 1958

Item and Type of Ownership	Under $25,000	$25,000 to $99,999	$100,000 to $499,999	$500,000 or Over
	p.c.	p.c.	p.c.	p.c.
Establishments—				
Individual ownership	74.8	44.3	11.3	0.7
Partnerships	14.6	16.0	7.6	1.0
Incorporated companies	10.1	37.0	75.7	96.1
Co-operatives	0.5	2.7	5.4	2.2
Totals	100.0	100.0	100.0	100.0
Employees—				
Individual ownership	67.7	38.2	6.9	0.2
Partnerships	18.2	16.2	6.2	0.3
Incorporated companies	13.7	44.2	85.0	98.9
Co-operatives	0.4	1.4	1.9	0.6
Totals	100.0	100.0	100.0	100.0
Factory Shipments—				
Individual ownership	70.9	40.2	8.4	0.2
Partnerships	15.4	15.7	6.4	0.3
Incorporated companies	13.1	41.0	80.2	98.5
Co-operatives	0.6	3.1	5.0	1.0
Totals	100.0	100.0	100.0	100.0

Of the 36,741 establishments operating in 1958, 1,556 establishments in the periodical publishing industry were unclassifiable, leaving 35,185 establishments in the four categories of ownership. Individual ownership numbered 13,786 establishments, partnerships 3,923, incorporated companies 16,566 and co-operatives 910. The percentage distribution of the four categories of ownership is given in Table **14** for 1949-58.

14.—Percentage Distribution of Establishments in Manufacturing Industries classified by Type of Ownership, 1949-58, and by Province and Industrial Group, 1958

Year	Individual Ownership	Partnerships	Incorporated Companies	Co-operatives	Total
	p.c.	p.c.	p.c.	p.c.	p.c.
1949	46.0	15.8	35.3	2.9	100.0

[1] Included with incorporated companies.
[2] Four main categories of ownership only; the non-classifiable group is not included (see text on p. 654).

The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to Tables 15 and 16, these establishments, which comprise 39.2 p.c. of the number, had only 4.4 p.c. of the total employees. Partnerships accounted for 11.1 p.c. of the number of establishments and 2.3 p.c. of the total employees. Incorporated companies with 47.1 p.c. of the number of establishments had 92.4 p.c. of the employees. Co-operatives with 2.6 p.c. of the number had less than 1 p.c. of the employees.

On the basis of employment provided, incorporated companies are, by a wide margin, the most important factor in the employment field. Such companies had more than 99 p.c. of the employees in the rubber, paper, transportation equipment, electrical apparatus and supplies, and petroleum and coal groups; 98 p.c. of the employees in the tobacco, chemicals and allied products, and non-ferrous metal products groups; 96 p.c. in the textiles and iron and steel groups; 92 p.c. in leather products; and 91 p.c. in miscellaneous manufacturing industries. The lowest proportion was 79 p.c. in the wood products group.

Subsection 4.—Leading Manufacturing Industries

The ranks of the ten leading industries in 1959, from the standpoint of selling value of factory shipments, are compared with their respective ranks in significant years since 1929 in the following statement:—

Industry	*Rank in—*						
	1929	*1933*	*1939*	*1944*	*1949*	*1958*	*1959*
Pulp and paper	1	1	2	5	1	1	1
Non-ferrous metal smelting and refining	9	2	1	2	3	3	2
Petroleum products	10	6	6	14	5	2	3
Slaughtering and meat packing	2	3	3	1	2	4	4
Motor vehicles	4	11	5	7	4	5	5
Primary iron and steel	16	31	11	13	8	6	6
Sawmills	5	14	8	11	6	7	7
Butter and cheese	6	5	4	10	7	8	8
Miscellaneous electrical apparatus and supplies	[1]	[1]	[1]	[1]	19	10	9
Sheet metal products	[2]	[2]	[2]	[2]	[2]	13	10

---

[1] Not classified separately but included with electrical apparatus and supplies. [2] Did not rank among the forty leading industries.

A prominent feature of Canadian manufacturing development during this period has been the advance of the petroleum products industry to one of the top three places and the advance of primary iron and steel and non-ferrous metal smelting, particularly since the war years. During the past few years there has been little change in the ranking of the major industries. In 1959 compared with 1958, non-ferrous metal smelting and refining moved up to second place and petroleum products dropped from second to third place. Aircraft and parts moved down from ninth place to seventeenth and sheet metal products advanced to take its place as the tenth leading industry.

17.—Principal Statistics of the Forty Leading Manufacturing Industries, ranked according to the Selling Value of Factory Shipments, 1958 and 1959

	Year and Industry	Establishments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments

---

[1] Reported on a production basis. [2] Not exactly comparable with 1958 because of a change in the method of valuation; if 1958 method had been used, 1959 shipments would have totalled approximately $1,425,051,000.

Section 3.—Principal Factors in Manufacturing Production

In addition to the factors dealt with in the following Subsections 1 and 2, one of the principal indicators of growth in manufacturing production is the amount paid as salaries and wages to various groups of employees within these industries. Detailed information on employment, earnings and hours is given in the Labour Chapter of this volume, Section 3.

Subsection 1.—Capital and Repair Expenditures

The present series of statistics covering expenditure on fixed capital and repairs by manufacturing industries commences with the year 1944.

Capital expenditures by manufacturers in 1958 totalled $397,600,000 for construction and $697,400,000 for machinery and equipment; in addition, $571,900,000 was spent for repairs. Of the total capital expenditures amounting to $1,095,000,000, 13.1 p.c. was reported by petroleum and coal products, 11.6 p.c. by paper products, 11.5 p.c. by iron and steel products, 11.5 p.c. by foods and beverages and 10.6 p.c. by chemicals and allied products.

On the whole, there was a considerable drop in capital expenditure in 1958 from the high level of 1957. Even so, the 1958 figure was the third highest on record. The average annual expenditure on capital assets amounted to $1,058,800,000 for the period 1951-58, reflecting the expansion and modernization of the manufacturing industries of Canada during that period.

Of the groups reporting capital expenditures of $50,000,000 or more in 1958, only two reported increases over 1957—foods and beverages, and petroleum and coal products. The other five groups in this category reported decreases ranging from 109.4 p.c. for paper products to 14.9 p.c. for transportation equipment.

18.—Capital and Repair Expenditures by the Manufacturing Industries, 1949-58, and by Province and Industrial Group, 1958

Year, Province and Industrial Group	Capital Expenditure			Repair Expenditure

[1] Includes knitting mills.

Subsection 2.—Size of Manufacturing Establishments

The size of a manufacturing establishment is generally measured either by the value of factory shipments or by the number of employees but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees.

Size as Measured by Selling Value of Factory Shipments.—In 1946, after heavy wartime production had ceased and reconversion had barely begun, there were 1,442 manufacturing establishments, each with an output of $1,000,000 or over. Their combined production was valued at $5,377,870,217 and accounted for 66.9 p.c. of the total for all manufacturing plants. By 1949, the number of factories in that category had increased to 1,926 and the proportion of their production to the total was 74.4 p.c. As a result of the tremendous industrial expansion and the increase in prices of the 1950's, the number of plants with shipments valued at over $1,000,000 increased to 3,212 in 1958. These plants contributed 80.8 p.c. of the total output in that year.

19.—Manufacturing Establishments and Total and Average Production classified by Value of Product Group, 1946, 1949, 1955 and 1958

---

[1] In 1952 gross value of products was replaced by selling value of factory shipments.

[2] Newfoundland included from 1955.

Size as Measured by Number of Employees.—In 1946 the 311 establishments employing 500 or more persons accounted for 32.3 p.c. of the total number of employees engaged in manufacturing. In 1958 there were 367 plants with more than 500 employees, 55 of them with over 1,500. The 367 plants employed 33.3 p.c. of the total workers in all manufacturing establishments.

Size of Establishments in Leading Industries.—Table **22** shows the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the motor vehicle, non-ferrous metal smelting and refining, railway rolling-stock, aircraft and parts, pulp and paper, iron and steel, rubber goods, and heavy electrical machinery industries. On the other hand, the degree of concentration is low in such industries as factory clothing, furniture, butter and cheese, miscellaneous food preparations, fruit and vegetable preparations, sawmills and printing and bookbinding.

22.—Percentage Importance of Establishments, each Employing 200 or more Persons, in the 25 Leading Industries, 1958

	Industry	Number of Establishments Employing 200 or more Persons	Percentage of Total Establishments in the Industry	Percentage of Total Shipments in the Industry
1	Pulp and paper	82	64.1	94.7
2	Petroleum products	19	26.8	85.8
3	Non-ferrous metal smelting and refining	21	84.0	97.5

PART III.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

Section 1.—Provincial Distribution of Manufacturing Production

This Section shows the distribution and concentration of the manufacturing industries in each province followed by a general analysis of the leading industries in the individual provinces. Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1958 amounted to $17,618,826,619 or 80 p.c. of the total factory shipments of manufactured products. The water power and other important resources of the two provinces, their large population concentrations and consumer demands and their nearness to the larger markets of the United States have contributed to this progress.

Table **1** shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of tobacco and tobacco products, textiles, knitting mills and clothing, and products of petroleum and coal. In each of the other groups

Ontario has the greater production of the two provinces. In the production of wood products British Columbia, with 41 p.c. of the total, holds the dominant position, outranking both Ontario and Quebec which account for 25 and 22 p.c., respectively, of the total. In each of the other groups Ontario and Quebec lead by a wide margin.

1.—Summary Statistics of Manufactures of each Province classified by Industrial Group, 1958

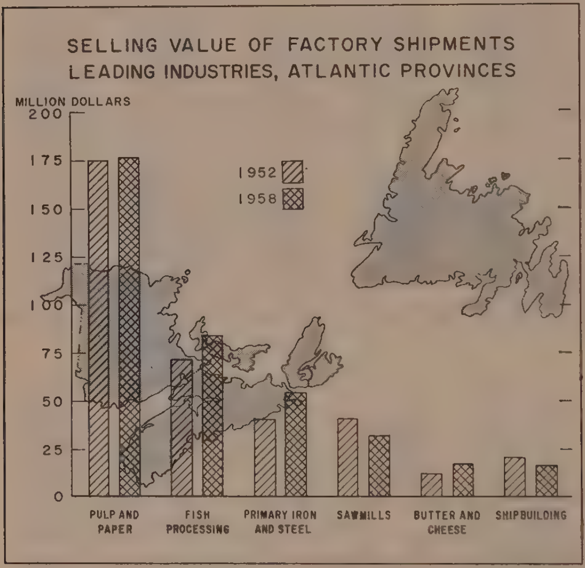
Subsection 1.—The Manufactures of the Atlantic Provinces

The Atlantic Provinces are of economic importance in a number of fields, such as pulp and paper, fish processing, sawmills and primary iron and steel. In *Newfoundland* manufacturing production is dominated by the forest and fisheries resources. Pulp and paper is by far the most important industry, having shipments valued at $61,003,231 in 1958, followed by fish processing with shipments of $15,661,753. These two industries accounted for 66 p.c. of the total production of the province. In *Prince Edward Island* agriculture and fishing resources make butter and cheese, slaughtering and meat packing, and fish processing the leading industries. *Nova Scotia* is renowned for its coal mines, its fisheries and its extensive forests and agricultural lands; it is also favoured with easy access by sea to the high-grade iron ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, fish processing, pulp and paper, shipbuilding and sawmills. In addition, an important petroleum refinery and industries producing railway rolling-stock, coke and gas, miscellaneous iron and steel products, and aircraft add to the diversification of industry in the province. The forests of *New Brunswick* give a leading place to pulp and paper and sawmilling industries in the province. Other important manufacturing and processing activities are based on fish and agricultural resources, and there are also a number of metal working industries producing heating and cooking apparatus, brass and copper products, etc.



SELLING VALUE OF FACTORY SHIPMENTS LEADING INDUSTRIES, ATLANTIC PROVINCES

Considering the Atlantic Provinces as an economic unit, pulp and paper was the leading industry in 1958 with factory shipments valued at $177,110,505. Fish processing and packing with factory shipments valued at $84,801,250 was in second place. Other leading industries, in order of importance and with shipments exceeding $30,000,000, were: petroleum products, primary iron and steel, sawmills and sugar refining. These six industries accounted for 55 p.c. of the total value of factory shipments in the Atlantic region.

The value of factory shipments in 1958 registered a drop of 1.6 p.c. compared with 1957, and the number of persons employed in manufacturing was 5.7 p.c. lower. However, all but three of the consumer goods industries having shipments of over $10,000,000 during the year reported increases, ranging from 12.8 p.c. for prepared stock and poultry feeds to 2 p.c. for petroleum products. The three consumer goods industries reporting decreased shipments were pulp and paper, sugar refining and coke and gas. On the other hand, industries manufacturing producer or durable goods to the value of more than $10,000,000 in 1958 reported substantial declines in value of shipments. Railway rolling-stock was down 22.5 p.c., shipbuilding and repairs 19.5 p.c., sawmills 15.6 p.c., and primary iron and steel 0.6 p.c. The miscellaneous iron and steel products group, which was in this category in 1957, reported a severe decline bringing its shipments down below the $10,000,000 mark.

Postwar industrial development in the Atlantic Provinces has been more selective than in some of the other provinces. Fish processing, new sawmills, increased pulp-making capacity and the manufacture of non-metallic building materials like cement and gypsum products have accounted for well over half of the industrial growth. There are, however, a few outstanding exceptions. Two sizable defence plants have been established in Nova Scotia, one to repair and overhaul naval aircraft and the other to build and repair radar and related electronic equipment. Considerable development has taken place in Newfoundland; besides plants for the manufacture of cement and gypsum wallboard and plaster, factories for producing boots and shoes, birch veneer, leather goods, industrial machinery and tanned leather were established, thus broadening the industrial base of the province. With these exceptions, most of the developments in the Atlantic Provinces have been either small and scattered or confined to the modernization and expansion of existing facilities.

Thus, manufacturing production in the Atlantic area has not quite kept pace with that in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by a drop in the Atlantic Provinces' share of the Canadian total shipments from 4.5 p.c. in 1949 to 3.9 p.c. in 1958. In number of persons employed there was a decrease of 4.6 p.c. for the Atlantic Provinces but an increase of 9.9 p.c. for Canada as a whole. Salaries and wages paid increased 50.7 p.c. for the Atlantic Provinces compared with 85.1 p.c. for Canada and selling value of factory shipments increased 50.8 p.c. compared with 77.5 p.c. for Canada. Increased employment since 1949 reported by Newfoundland was offset by a major decline in New Brunswick and minor declines in Prince Edward Island and Nova Scotia.

3.—Statistics of the Leading Industries of the Atlantic Provinces, 1958

	Industry	Establishments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments

---

[1] Publication of these figures was authorized by the firms concerned.

[2] Reported on a production basis.

[3] Includes dairy products, *n.e.s.*; cement, hydraulic; gypsum products; miscellaneous food preparations; paints, varnishes and lacquers; railway rolling-stock; slaughtering and meat packing; and machinery, industrial.

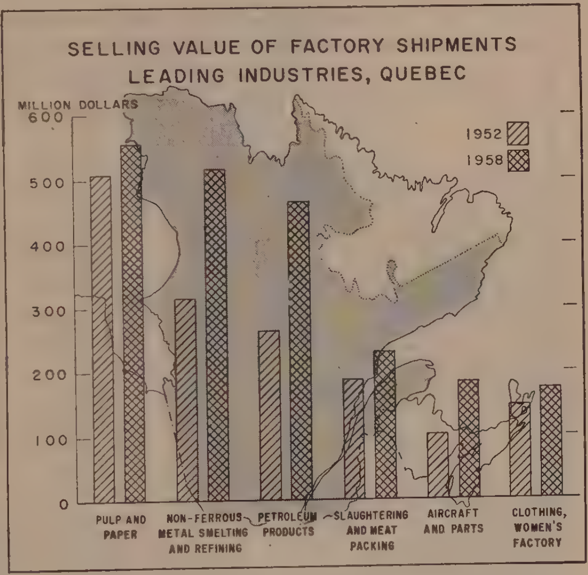
[4] Includes bags, cotton and jute; fertilizers; printing and publishing; and slaughtering and meat packing.

[5] Includes breweries; cotton yarn and cloth; boxes and bags, paper; bridge and structural steel work; wire and wire goods; miscellaneous iron and steel products; aircraft and parts; railway rolling-stock; salt; coke and gas; and petroleum products.

[6] Includes breweries; brass and copper products; brooms, brushes and mops; cement, hydraulic; railway rolling-stock; shipbuilding; and sugar refining.

Subsection 2.—The Manufactures of Quebec

Quebec has long ranked as the second largest industrial province of Canada. The province experienced a great industrial expansion following World War II, an expansion not confined to existing industrial areas, but spreading to many towns and villages in the accessible areas of the province and into new areas in the hinterland. In 1958 its output of $6,754,798,278 represented about 30 p.c. of Canada's total selling value of factory shipments.



SELLING VALUE OF FACTORY SHIPMENTS
LEADING INDUSTRIES, QUEBEC

Several important factors have contributed to the development of industry in Quebec. Its geographic situation is extremely favourable, including as it does the great water highway of the St. Lawrence River with its excellent harbour at Montreal, 800 miles inland. There is also an extensive road network linking the small rural areas with the larger industrial centres. Other significant factors include abundant natural resources in forests, water power, minerals, agricultural lands, and, of even more importance, an industrious and stable population.

The pulp and paper industry, with an output valued at $556,228,761 in 1958, continues as Quebec's leading manufacture. The province is a principal world centre for the production of newsprint, having 55 major pulp and paper plants concentrated in the Trois Rivières and Shawinigan Falls districts, as well as along the Saguenay, Ottawa and St. Lawrence Rivers. The production of non-ferrous metals has expanded considerably during the past decade. Aluminum, which until a few years ago was produced only in Quebec, is now also produced in British Columbia but Quebec still maintains its impressive lead in the output of this metal. The province, in its Montreal area, also boasts the major oil refinery district in the country. Two of the most important industrial developments now under way in Quebec are the Ungava iron ore project and the new titanium industry at Allard Lake and Sorel.

Quebec's industries are not as diversified as those of Ontario, although a number produce more than half of the Canadian total. The manufacture of pulp and paper occupies the premier position; by the end of 1958 it accounted for about 8 p.c. of the gross value of Quebec's manufactures and for 39.9 p.c. of the Canadian total for this industry. Other large industries in which Quebec predominates include: tobacco, cigars and cigarettes with 87.1 p.c. of the Canadian total production; women's factory clothing with 69.8 p.c.; cotton yarn and cloth 68.2 p.c.; leather footwear 56.3 p.c.; men's factory clothing 54.3 p.c.: synthetic textiles 50.7 p.c.; miscellaneous electrical apparatus and supplies 47.9 p.c.; non-ferrous metal smelting and refining 45.6 p.c.; medicinal and pharmaceutical preparations 45.6 p.c.; shipbuilding and repairs 42.4 p.c.; railway rolling-stock 41.8 p.c.; aircraft and parts 40.0 p.c.; acids, alkalies and salts 38.3 p.c.; brass and copper products 35.5 p.c.; petroleum products 34.2 p.c.; furniture 33.7 p.c.; and miscellaneous chemical products 31.9 p.c.

Despite the slowing down of Canadian production which began in the autumn of 1957 and continued throughout most of 1958, Quebec recorded a small increase of 2.0 p.c. in selling value of factory shipments between 1956 and 1958. In employment, however, there was a loss of 3.8 p.c. in the same period, but this compares with a loss of 4.7 p.c. for Canada as a whole. The non-durable goods industries, which contribute about 63 p.c. of the total manufacturing production of the province, reported an increase of 6.5 p.c. in the selling value of factory shipments and a decline of 1.8 p.c. in the number of persons employed. The durable goods industries were much more severely affected by the recession and reported a drop of 5.6 p.c. in shipments and of 7.0 p.c. in number of employees.

4.—Statistics of the Leading Industries of Quebec, 1958

	Industry	Establishments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments
		No.	No.	$	$	$	$
1	Pulp and paper	55	27,100	126,473,048	233,916,862	281,137,414	556,228,761

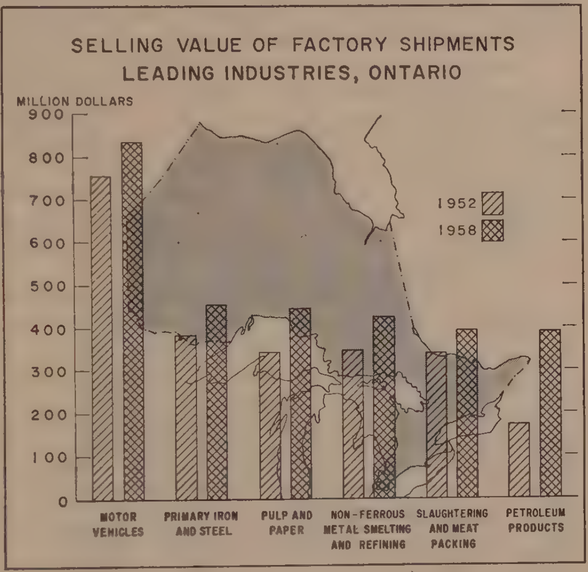
[1] Reported on a production basis.

[2] Sugar refining is also a leading industry but statistics are confidential.

Subsection 3.—The Manufactures of Ontario

Ontario is one of the world's major industrial areas. Here the proximity of raw materials, cheap hydro-electric power and a strategic location in relation to export markets, not only on this Continent but overseas, have been the decisive factors of development.

Most of the manufactures and most of the population are located in the southern area of the province, which has the inestimable advantage of bordering on the St. Lawrence–Great Lakes waterway system, giving access westward to the heart of the Continent and eastward to the shipping routes of the world. Furthermore, this same waterway is also the source of most of Ontario's developed hydro-electric power. Many new industrial areas are being created as new industries and branch plants of established industries are increasingly being located in the smaller towns.



SELLING VALUE OF FACTORY SHIPMENTS
LEADING INDUSTRIES, ONTARIO

Despite the great industrial progress made by other provinces, Ontario continues to maintain its predominance and in 1958 produced about 50 p.c. of the nation's manufactured goods. A vast increase of steel ingot capacity has been made possible by developments at the Steep Rock iron mines, northwest of Lake Superior. Huge investments have gone into the construction of plant and equipment for a whole group of new products based on Alberta oil flowing eastward by pipeline. Significant developments are taking place in synthetic rubber, synthetic textiles, and industrial and consumer chemicals. Ontario has continued to gain in such traditional lines as motor vehicles, industrial and farm machinery, and the manufacture of household equipment. The same may be said of other "hard" goods like business and office machinery and electrical apparatus and supplies. Numerous plants making aircraft components and building materials have favoured the Toronto area, while chemical and synthetic textile plants have been rising in the vicinity of Sarnia and along the lower reaches of the St. Lawrence River between Cornwall and Kingston.

Ontario has the greatest diversification of manufacturing production of any province. Certain industries, such as the manufacture of motor vehicles, motor vehicle parts, heavy electrical machinery, agricultural implements, machine tools, starch and glucose, and the processing of raw tobacco, are carried on almost exclusively in this province. Of the forty leading industries in Canada in 1958, a substantial number were dominated by Ontario's share of the total production. These industries, with the percentage which the production of each bore to the 1958 Canadian total, were: motor vehicles 98.6 p.c.; motor vehicle parts 94.5 p.c.; heavy electrical machinery 90.1 p.c.; rubber goods 82.1 p.c.; primary iron and steel 77.4 p.c.; telecommunication equipment 75.9 p.c.; iron castings 68.5 p.c.; fruit and vegetable preparations 68.0 p.c.; industrial machinery 63.3 p.c.; miscellaneous chemical products 62.6 p.c.; brass and copper products 60.0 p.c.; sheet metal products 59.3 p.c.; printing and bookbinding 58.0 p.c.; aircraft and parts 53.5 p.c.; acids, alkalies and salts 52.6 p.c.; boxes and bags, paper 49.8 p.c.; printing and publishing 48.4 p.c.; furniture 48.3 p.c.; miscellaneous electrical apparatus and supplies 48.0 p.c.; synthetic textiles 45.8 p.c.; stock and poultry feeds 44.0 p.c.; and non-ferrous metal smelting and refining 37.6 p.c.

The medium-sized industries (those with a total production of over $100,000,000) in which Ontario dominated included: agricultural implements with 91.7 p.c.; soaps and washing compounds 89.0 p.c.; household and office machinery 81.1 p.c.; refrigerators, vacuum cleaners, etc. 77.0 p.c.; hardware, tools and cutlery 72.6 p.c.; heating and cooking apparatus 68.9 p.c.; boilers, tanks and plate work 60.7 p.c.; confectionery 57.6 p.c.; and knitted goods other than hosiery 44.3 p.c.

Ontario being the largest producer of durable goods, which are more severely affected by changes in the business cycle than consumer goods, was consequently affected more than any other province with the exception of Nova Scotia by the downturn in manufacturing production of 1957 and 1958. The selling value of factory shipments which amounted to $10,864,028,332 was 1.9 p.c. lower than in the previous year when shipments were the highest on record. The drop in employment amounted to 5.8 p.c. compared with a decrease of 5.1 p.c. for Canada as a whole; producers of non-durable goods in Ontario reported a drop of 2.6 p.c. in number of persons employed and producers of durable goods a drop of 9.7 p.c.

5.—Statistics of the Leading Industries of Ontario, 1958

	Industry	Establishments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments
		No.	No.	$	$	$	$
1	Motor vehicles	8	25,478	126,108,526	565,227,943	248,281,580	835,537,065

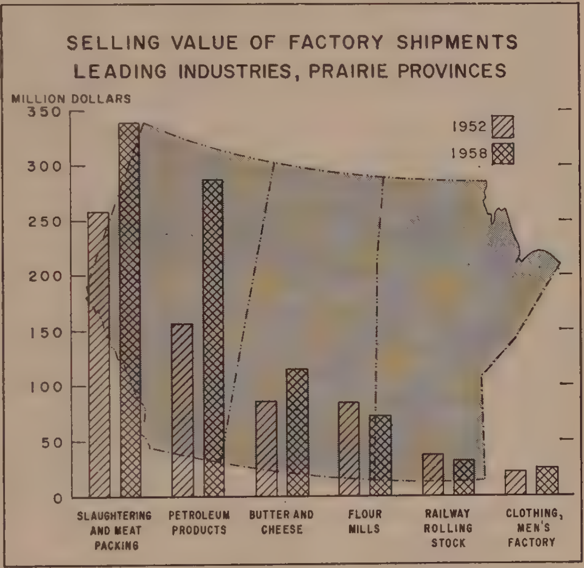
Subsection 4.—The Manufactures of the Prairie Provinces

In the Prairie Provinces the leading industries have traditionally been those based on agricultural resources—grain-growing, cattle-raising and dairying areas. But recently slaughtering and meat packing has emerged as the major industry, followed very closely by petroleum products. The latter industry has made tremendous strides in the mid-west. In 1956 it ranked highest in terms of selling value of factory shipments but dropped back to second place in 1957 and 1958. Of greater significance is the fact that it has increased its proportion of the total manufacturing production of the Prairie Provinces from 8.5 p.c. in 1949 to 15.5 p.c. in 1958. The expansion in manufacturing production in the Prairie Provinces as a unit between 1949 and 1958 has kept pace with that of Canada as a whole; the Prairie Provinces' share of total shipments amounted to approximately 8.5 p.c. in both years.



In the Prairie Provinces the nature of development varies from one province to another. Alberta has moved to the forefront, especially since 1950. There, recent emphasis has been on the manufacture of machinery and equipment for the expanding oil and gas industries. Chemicals, particularly petrochemicals, have made striking gains and now embrace various rayon intermediates and polythene plastics, as well as fertilizers and the manufacture of other inorganic products such as caustic soda and chlorine. Agriculture-based products still rank high in the province, as do such structural materials as steel, concrete products and hydraulic cement. Sizable gains have also been made by food-processing plants.

In Manitoba, the early commercial centre of the mid-west, water power, forest and, more recently, mineral resources have given rise to a diversification of industrial production, although slaughtering and meat packing is still in first place and butter and cheese in third. The province experienced great development in manufacturing production during the past decade but, on a percentage basis, did not keep pace with the other Prairie Provinces. The change has been largely one of emphasis rather than magnitude—the emphasis moving away from the production of food and clothing to the production of goods of mineral origin such as iron and steel, non-metallic mineral products, electrical apparatus and products of petroleum and coal.

Developments in Saskatchewan have continued along more or less traditional lines. The largest gains in shipments have been recorded by the food processing industries and a substantial increase has also been shown by the building materials group, which includes non-metallic mineral products and lumber. However, the largest single gain in employment has been in the refining of oil for local use.

Considering the Prairie Provinces as an economic unit, 4,366 establishments reporting in 1958 furnished employment to 92,525 persons who received $326,223,056 in salaries and wages. They shipped goods valued at the factory at $1,873,601,758 and spent $1,091,598,993 for materials.

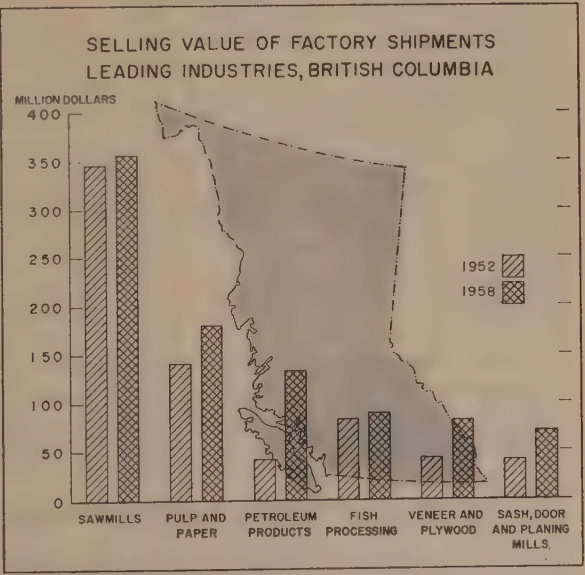
[1] Reported on a production basis. [2] Includes aircraft and parts; bridge and structural steel work; cement, hydraulic; gypsum products; non-ferrous metal smelting and refining; primary iron and steel; and sugar refining. [3] Castings, iron; cement, hydraulic; and non-ferrous metal smelting and refining are also leading industries. Statistics, however, are confidential since there are fewer than three establishments. [4] Includes fertilizers; pulp and paper; railway rolling-stock; non-ferrous metal smelting and refining; and sugar refining.

Subsection 5.—The Manufactures of British Columbia

British Columbia, with factory shipments totalling $1,798,960,459 in 1958, ranked third among the provinces in manufacturing production. Forest resources, fisheries, minerals and electric power have given a broad base and wide diversification to its industrial development. British Columbia holds the dominant position among the provinces in the production of wood products, its output in 1958 making up 41 p.c. of the Canadian total. Sawmilling, pulp and paper, veneer and plywood, and sash, door and planing mills ranked first, second, fifth and sixth, respectively, in 1958. Third in importance was the petroleum products industry which moved up from seventh place in 1953 as a result of the construction of the Trans Mountain oil pipeline. In fourth place was fish processing, based principally on the estuarial salmon fisheries. The province accounted for approximately 50 p.c. of the output of the fish processing industry in that year and is mainly responsible for Canada's position as a major fish exporting nation.



Recently, many new developments have been taking place in areas far removed from older established industrial centres. Growing lines of communication and transportation are fanning out from and leading into formerly locked interior communities to tap a vast new potential and offer new sources of provincial economic unity and strength. Factories and plants in remote sections are drawing greater value in employment and dollars from natural resources. The growth of the province industrially may be indicated by the increase in employment which in 1958 was two and one-half times the prewar figure. In dollar terms, gross value of manufacturing was up 650 p.c. since 1939 and the consumption of 7,700,000,000 kwh. of electric power by manufactures during 1958 marked a steady upward climb of 200 p.c. during the past decade. British Columbia ranks second among the provinces in available water power resources and its hydraulic development, which at the end of 1958 totalled 3,312,160 hp., was exceeded only by Quebec and Ontario.

Despite the substantial declines during 1957 and 1958, manufacturing in British Columbia fared better than in Canada as a whole since 1953; in comparing 1958 with that year, employment for British Columbia was 6.8 p.c. higher while for Canada as a whole it was 2.9 p.c. lower. Also, in value of shipments British Columbia reported an increase of 31.6 p.c. as compared with one of 24.6 p.c. for Canada. There was an expansion in manufacturing production in British Columbia during 1954 when the remainder of Canada was experiencing a minor recession, and growth continued in that province, as in the remainder of the country, through 1955 and 1956. However, during the slowdown of 1957 and 1958 the decline in British Columbia was more severe than for Canada as a whole. For these two years the province experienced a decline of 7.7 p.c. in number of employees and 3.2 p.c. in selling value of factory shipments, while for Canada as a whole the number of employees was down 4.7 p.c. and the value of factory shipments increased 2.4 p.c.

7.—Statistics of the Leading Industries of British Columbia, 1958

[1] Reported on a production basis. [2] Non-ferrous metal smelting and refining is also a leading industry. Statistics, however, are confidential since there are fewer than three firms reporting.

Section 2.—Manufacturing Industries in Urban Centres

Table 8 indicates the extent to which the manufacturing industries are concentrated in urban centres and shows, by province, the proportion of the selling value of factory shipments contributed by cities and towns having shipments of over $1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns accounted for 77 p.c. and 94 p.c., respectively, of the total manufactures of those provinces in 1958, while in the Atlantic Provinces and British Columbia, where sawmilling, fish packing and dairying are leading industries, the proportions were 68 p.c. and 49 p.c., respectively. In the Prairie Provinces, manufacturing is confined largely to a few urban centres.

A trend toward the decentralization of industry is apparent in all provinces but the most striking change has been shown by Ontario where there has been a recent tendency to establish new industry in smaller urban centres and where many new one-industry areas have been opened up. For Canada as a whole, the percentage of manufactures accounted for by urban centres having shipments of over $1,000,000 was 80.5 in 1955 but dropped to 79.4 by 1958.

8.—Urban Centres, Each with Selling Value of Factory Shipments of Over $1,000,000, Number of Establishments and Total Shipments in these Centres as a Percentage of the Provincial Total, by Province, 1958, and Totals for Canada, 1956-58.

Province or Territory	Urban Centres with Shipments of Over $1,000,000 Each	Establishments Reporting in Urban Centres with Shipments of Over $1,000,000	Shipments of Urban Centres having $1,000,000 or Over	Total Shipments of Each Province	Shipments of Urban Centres having $1,000,000 or Over as a Percentage of Total Shipments in the Province

---

[1] Net value is derived from gross value by deducting cost of materials, fuel and electricity. In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 631.

CHAPTER XV.—CAPITAL EXPENDITURES, CONSTRUCTION AND HOUSING*

CONSPECTUS

	Page
Special Article: **The Construction Industry in Canada**	684
Section 1. Capital Expenditures on Construction and on Machinery and Equipment	689
Section 2. Construction Statistics	696
Subsection 1. Value of Construction Work Performed	696
Subsection 2. Contracts Awarded and Building Permits Issued	702
Section 3. Housing	708
Subsection 1. Government Aid to House-Building	708
Subsection 2. Housing Activities in 1960	712

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter, in addition to including a special article relating to the significance of construction activity in the economic life of the nation, provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 describes the purpose of capital expenditures and shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity—value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building and construction of dwelling units are covered in Section 3.

THE CONSTRUCTION INDUSTRY IN CANADA†

Construction activity in Canada is completely interwoven with the social fabric of the economy. Its demands are created by all other industries and it serves a widely heterogeneous pattern of economic activity. Manufacturers and commercial interests call upon the construction industry to provide facilities for the housing of equipment and machinery and for the storage of commodities. Transportation service industries call upon it to provide roads, railways, harbours, airfields and telecommunication facilities. The mining industry calls upon it to provide processing plants and townsite developments. In turn, communities call upon it to provide social institutions, housing and other related service facilities. In general, the health of the construction industry is basic to the welfare and progress of the community and, conversely, the progress of the community is basic to the prosperity of the construction industry.

Because of the intimate complexity of construction demands, it is at times difficult to differentiate between construction activity and what may be classed as other types of activity. With the increase of off-site prefabrication and the assembly of building parts in factories or in suppliers' yards and shops, the lines of demarcation between construction activity and goods manufacture and distribution are rather obscure, yet the activities of the latter groups are closely associated with on-site construction activity. Thus, while the measurement of construction activity in its entirety is not possible, the significance of that activity in the economic life of the nation is much greater than is usually realized.

---

* Except where otherwise noted, prepared in the Operations Section, Business Finance Division, Dominion Bureau of Statistics.

† Prepared by Wm. J. H. Purcell, Economics Branch, Department of Trade and Commerce, Ottawa.

For instance, the construction industry proper, which employed close to a quarter of a million persons in 1930, in 1959 provided employment for more than half a million and thus was one of the largest single industrial employers in the Canadian economy. When construction carried out directly by other types of business enterprise on their own behalf is considered, together with employment generated by the industries producing construction materials, the significance of construction activity becomes very much greater.

Viewed in relation to the total level of output of goods and services produced by the nation, total construction activity has become even more important. On an average, over the past five years the value of new and repair construction of all types has accounted for about one-fifth of the total Canadian productive effort—a proportion nearly twice as high as found during the depression period of the 1930's. This strong rate of growth in both the level of activity and the relative proportion to total economic activity does not preclude various inherent problems. The most notable of these is the extreme volatility of the industry.

1.—New and Repair Construction as a Percentage of Gross National Expenditure, 1926-59

Year	Percentage of Gross National Expenditure	Year	Percentage of Gross National Expenditure	Year	Percentage of Gross National Expenditure
1926	15.6	1938	13.9	1949	17.9

The long-term demand pattern for construction is, of course, influenced by the general level of Canadian economic activity and also by the changing character of the development of Canada's natural resources. As is well known, construction activity goes through wider 'cycles' than most other economic activity, tending to hit lower 'troughs' in times of depression and higher 'peaks' in times of boom. The construction materials industry, being geared to these cycles, fares accordingly. Despite such wide cyclical swings, the industry continues to show a strong long-term expansionary tendency. The rapid rate of population growth, the shift from a rural to a highly organized industrial economy, the growing need for social capital and power and transport facilities, together with the introduction of improved techniques in both construction and material processing have all contributed to the maintenance of a high level of demand in the construction and building materials industries.

Although the construction industry generally is subject to volatile cyclical fluctuations, the varying pattern of construction expenditures greatly influences the welfare of specialized contractors and in turn influences the producers of building materials. Not all share equally the benefits of an accelerated investment program. Emphasis on housing and social capital creates demands for certain types of skills and materials that are not used extensively in office building construction or in the construction of specialized industrial plants. Emphasis on housing stimulates the output of such materials as sewer pipe, heating equipment, siding, insulation, roofing and flooring, brick and tile and many other items that are directly oriented to housing and community construction programs. Similarly, rapid industrial expansion stimulates the production and use of such materials as structural steel, bars and rods, pre-stressed concrete, heavy electric wire and electronic panels. It also follows naturally that the pattern of demand for construction skills and trades fluctuates as the pattern of construction changes.

2.—Expenditures on New and Repair and Maintenance Construction, 1926-60

NOTE.—Actual expenditures 1926–59; preliminary actual 1960.

In addition to its cyclical behaviour, the construction industry displays a high level of seasonal activity. Because of the extremes of climate during the winter months, most construction work has been confined traditionally to the longer and warmer summer day and the amount undertaken during the shorter and more severe winter day is rather restricted. The effect of this practice has been the creation of a large construction labour force necessary to satisfy a high seasonal peak of activity. On the other hand, the slowdown in the winter months has generated a high level of seasonal unemployment among construction workers. Thus, one of the paramount objectives of the industry today is to moderate these extreme seasonal fluctuations in employment by developing new techniques of winter construction and by introducing new building materials and designs. The industry, with the co-operation of government agencies and builders' associations, has embarked on a continuing program of research and education with a view to minimizing the decline of activity during the winter. It has already had significant success in certain regions of the country for many types of construction activities.

Organization of the Industry.—In both organization and technology, the construction industry is the reflection of a widely diversified and changeable market. Its development over the past thirty years has been one of continuing adaptation to the instability of economic conditions, to rapidly changing techniques of construction, and to the utilization of new construction materials. The special characteristics of building structures, the variety and variability of construction activity, the extent of government influence and the effect of external economic factors are unique to this industry and have produced a continually changing kaleidoscope of demand patterns. This has at times imposed serious hardships on the industry, hardships and challenges that have been met by the ingenuity and aggressive pioneering of men of foresight and determination. As a

CONSTRUCTION

1952-61

result, a widely diversified group of specialized construction companies has been generated; these companies provide the expert advice and skills essential to the application of efficient construction techniques in their respective fields, which may be oil drilling, pipe-laying, road-building, communications structures, structural steel placement or other type of specialized construction. At the same time, a more general type of organization has developed which has sufficient internal adjustability to permit it to adapt itself to different problems as they arise. The main function of this type of organization is to co-ordinate and administer the whole construction program on large-scale projects and thus achieve maximum efficiency of operations. They, in turn, rely heavily upon the skills of the individual sub-contractor and specialized trade groups.

Along with the accumulation of skills and engineering experience, many highly efficient mechanical aids have been developed. The now common use of such machinery has considerably increased output per man-hour employed but at the same time has necessitated a higher level of capital investment and equipment per dollar of construction output.

Regional Differences.—The shift from a rural to a highly industrialized urban society has, of course, been accompanied by a gravitation of the population toward the major industrial centres of the country and also by the establishment of new urban centres around resource developments. As a result of such concentration, construction activity in conjunction with the suppliers of materials and services has become quite self-sufficient by regions. Throughout the wide expanse of this country, climatic and economic factors vary between regions; thus the nature and character of the construction industry also varies, requiring differing types of services and materials.

It is natural that the general expansion of the construction industry has not been shared equally by all regions of the country. Changing emphases created by a growing economy make for uneven construction demands which are more favourable to some areas than to others. For instance, the development of a large isolated mineral deposit—which has occurred many times in recent years—involves the building of mine facilities, railway transport facilities, water shipping facilities and often the construction of a completely new townsite with its housing requirements and the multitude of service and manufacturing facilities needed to provide the inhabitants with a modern mode of living; all this requires a very large and comprehensive construction program. On the other hand, the stimulation of the fishing industry or the logging industry, while of great importance to a local area, would require less construction and would therefore have a much milder effect on construction activity.

Table **3** suggests the changing emphasis of construction activity in the different regions of Canada. Quebec and Ontario each continue to account for a large proportion of total construction expenditures, although the proportions for the Prairie Provinces and British Columbia have increased significantly over the period shown. In contrast, the Atlantic Provinces have accounted for a decreased percentage of the total.

3.—Average Percentage Distribution of Construction Expenditures, by Region, Certain Periods during 1934-60

Canada (excl. the Territories)	**100.0**	**100.0**	**100.0**	**100.0**

Construction Materials.—The demand for building materials is satisfied by the efforts of a multitude of processing industries. Most secondary manufacturing industries contribute in some way to the supply of processed or semi-processed commodities required by the construction industry. The basic material for all wood products, wallboards, insulating and other papers is contributed by the lumber industry; asphalt, explosives, plastics, paints and many other products are contributed by the chemical industry; steel rails, sheets, nails and other metal commodities are contributed by the iron and steel industry; and rock, stone and cement are supplied by the quarrying industry. These are but a few of the industries concerned with the provision of materials directly related to construction activity.

New techniques of construction and new products are substituting to varying degrees for traditional methods and materials. Reinforced concrete which replaced much of the need for steel and timber is now being partially replaced by pre-stressed concrete. Stainless steel and aluminum sheets are becoming more and more common as facing for office buildings, often replacing brick and stone. Off-site prefabrication techniques have increased the volume of work being done by the manufacturer and have necessitated the use of other new materials. Thus, certain building materials have experienced much greater growth than others, as is indicated by the figures of Table 4.

4.—Indexes of Building Materials Production, Alternate Years, 1935-60

[1] Subject to revision.

Canadian facilities for the production of most structural materials have expanded in recent years and, at the same time, many new plants have been established to produce materials previously imported. For instance, during the past ten years facilities have been constructed for the manufacture of both large- and small-diameter pipe to be used for oil and gas transmission. Large-size wide-flange steel beams and plate, aluminum extrusions and plastic sheathing are now among Canadian products. The output of bottled gas, a major requirement in the provision of refrigeration service and in construction, has increased considerably. The development of the petrochemical industry has made available cheap basic raw materials for the production of other construction products such as floor and acoustic tile, new insulating materials and paint solutions. Titanium-based pigments for paint manufacture are being recovered as by-products, using raw materials from titanium slag piles and waste petroleum refinery gases. Additional capacity for the production of titanium-based pigments is being installed and will be operative in 1963.

Because of continually increasing demand, cement production capacity has more than doubled. The rapid expansion of this industry has led to its diversification and output integration. Ready-mix plants are now common in most major communities and are a vital link in the quality control and efficient application of cement in large-scale production projects. New techniques of application and use have led to an expansion of secondary product manufacture such as blocks, brick, pipe and pre-stressed beams and slabs. Recent developments suggest the greater use of cement for soil stabilization purposes which will assist in the building of good roadbeds.

At present, the Canadian construction materials industry is relatively self-sufficient, except for certain items that are unique in their application for architectural and aesthetic needs.

Outlook for the Construction Industry.—Forecasts of construction expenditures for the next twenty-five years indicate a growing emphasis on engineering construction, realizing the increasing need for roads, electric power, research development and fully manufactured products of many kinds. Of significance in recent years has been the acceptance of contracyclical federal construction programs. Such programs have been oriented largely to requirements of the community for services in the form of housing and schools, hospitals and other institutions. This factor, in conjunction with aggressive business investment programs, will assist in restraining and stretching out construction booms and will stimulate construction actively in less prosperous times. Such stabilization of the construction cycle should, to a great extent, create greater efficiency and less fluctuation of activity within the building industry and, by so doing, also effect more constant growth of the multitudinous construction materials industries.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditures of all sectors of the economy amounted to $8,200,000,000 in 1960, a reduction of 2.6 p.c. from the 1959 total of $8,417,000,000. The decline was wholly accounted for by a smaller construction program—$5,487,000,000 being spent compared with $5,709,000,000 in the previous year. Purchases of machinery and equipment totalling $2,713,000,000 in 1960 were unchanged from the level of 1959. Total capital expenditures increased throughout most of the decade since 1950 and reached a record level in 1957. Since 1958, capital spending in Canada has remained at a high and fairly stable level, the variations being within a relatively narrow range. The 1960 capital program accounted for almost 23 p.c. of Canada's gross national product; thus it may be said that 23 p.c. of the gross national product was devoted to expanding, modernizing and renewing the nation's productive facilities.

5.—Capital Expenditures on Construction and on Machinery and Equipment, 1951-60

NOTE.—Actual expenditures 1951-59; preliminary actual 1960.

Year	Capital Expenditures			Total Expenditure as Percentage of Gross National Product
	Construction	Machinery and Equipment	Total	
	$'000,000	$'000,000	$'000,000	p.c.
1951	2,871	1,868	4,739	22.4
1952	3,434	2,057	5,491	22.9
1953	3,756	2,220	5,976	23.9
1954	3,737	1,984	5,721	23.0
1955	4,169	2,075	6,244	22.9[r]
1956	5,273	2,761	8,034	26.3
1957	5,784	2,933	8,717	27.3[r]
1958	5,830	2,534	8,364	25.4
1959[r]	5,709	2,708	8,417	24.1
1960	5,487	2,713	8,200	22.8

Looking at the 1960 program by type, there was less emphasis on construction and more on purchases of machinery and equipment than in 1959. Similarly, there was less construction of new houses and more non-residential construction as shown in Table 6.

6.—Capital Expenditures and Percentage Distribution, by Type, 1958-60

NOTE.—Actual expenditures 1958 and 1959; preliminary actual 1960.

Type	Capital Expenditures			Distribution		
	1958	1959	1960	1958	1959	1960
	$'000,000	$'000,000	$'000,000	p.c.	p.c.	p.c.
Construction	**5,830**	**5,709**	**5,487**	**69.7**	**67.8**	**66.9**
Housing	1,782	1,752	1,489	21.3	20.8	18.2
Non-residential	4,048	3,957	3,998	48.4	47.0	48.7
Machinery and Equipment	**2,534**	**2,708**	**2,713**	**30.3**	**32.2**	**33.1**
Totals	**8,364**	**8,417**	**8,200**	**100.0**	**100.0**	**100.0**

While total investment has shown no distinct trend in recent years, this has not been true of some of the major sectors of investment. From 1957 to 1958, a shift from business capital spending to social capital (housing, institutions and government installations) was clearly noticeable. This change in composition was also experienced, though to a lesser degree, from 1959 to 1960 despite the important reduction in expenditures on housing, and there are indications of a continuance of the trend during 1961.

The substantial decline in outlays for housing in 1960 coupled with the reduction in expenditures on utilities was mainly responsible for the over-all decrease in capital investment in that year. However, these declines were partially offset by gains principally in expenditures on resource-based industries, manufacturing industries, institutions and government departments. The steep decline in residential construction was partly caused by a restricted supply of mortgage funds in the first part of the year, particularly in lending under the National Housing Act. Later in the year when the supply of funds increased, general market conditions became the limiting factor in house-building activity. During 1960, about 109,000 new housing units were started and about 124,000 units were completed. Toward the end of the year the rate of housing starts improved substantially.

Capital expenditures in the primary industries were higher in 1960 than in the previous year. The figures for the agricultural sector reflect continued mechanization of farm activities. Higher capital outlays on the Quebec–Labrador iron ore projects and on petroleum and gas development in the western provinces were mainly responsible for the increase in the mining industry.

While expenditures for the construction of new manufacturing plants were lower than in 1959, manufacturers increased their purchases of machinery and equipment sufficiently to bring the total investment in the manufacturing industries to a higher level. The impetus came mainly from larger undertakings by the pulp and paper companies, the chemical industry, and the makers of iron and steel. The completion of major railway lines serving new mining areas and lesser requirements for new railway rolling-stock were the factors behind the substantial drop in capital outlays in the railway transport industry. On the other hand, increases in the telephone industry, in the construction of natural gas pipelines, and in municipal waterworks systems tended to counterbalance the decline in the railway industry, so that total capital expenditures in the utilities sector were not substantially lower than in the previous year.

While several important projects were completed during 1960, initial expenditures were made late in the year on new projects which will involve substantial capital outlays. A start was made on the Canadian portion of a new gas pipeline being built for the purpose of exporting natural gas to the United States and referred to as the Alberta–California project. The harnessing of the Manicouagan River in northern Quebec was also started in 1960; construction of the power facilities is expected to take many years and involve large capital outlays. In recent years, there has been a large amount of spending on the erection of office buildings and shopping centres and the trend continued in 1960. Also, the improved financial situation of hospitals and universities has permitted greater expansion of their facilities and outlays in this sector reached a record level in 1960.

7.—Summary of Capital and Repair Expenditures, by Economic Sector, 1958-60

Note.—Actual expenditures 1958 and 1959; preliminary actual 1960.

A summary of the capital expenditures in each province for the years 1958-60 is given in Table 9. Such expenditures represent gross additions to the capital stocks of the province and are a reflection of economic activity in the area, but the actual production of these assets may generate its major employment and income-giving effects in other regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the western provinces.

[1] Includes the Yukon and Northwest Territories. [2] Slight differences in totals from those shown in Table 7 are caused by rounding of figures.

Section 2.—Construction Statistics

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.* The data represent the estimated total value of all new and repair construction performed by contractors; labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Canada's construction program for 1960 is estimated at $6,889,000,000, slightly below the 1959 total. Repair construction is estimated to be about $33,000,000 higher than in 1959, and the value of new construction lower by about $222,000,000.

---

* An explanation of sources and methods is given in DBS annual report *Construction in Canada* (Catalogue No. 64-201).

10.—Value of New and Repair Construction Work Performed, 1951-60

NOTE.—Actual expenditures 1951-59; preliminary actual 1960.

Year	New	Repair	Total	Total Construction as Percentage of Gross National Product
	$'000,000	$'000,000	$'000,000	p.c.
1951	2,871	987	3,858	18.2
1952	3,434	1,010	4,444	18.5
1953	3,756	1,070	4,826	19.3
1954	3,737	1,105	4,842	19.5
1955	4,167	1,141	5,308	19.6
1956	5,272	1,182	6,454	21.1 r
1957	5,785	1,238	7,023	22.0 r
1958	5,831	1,261	7,092	21.6 r
1959 r	5,710	1,367	7,077	20.3
1960	5,489	1,400	6,889	19.2

Table **11**, which compares contract construction with other construction, shows that contractors account for from 72 p.c. to 76 p.c. of the work each year.

11.—Value of Construction Work Performed, by Contractors and Others, 1957-60

NOTE.—Actual expenditures 1957-59; preliminary actual 1960.

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table **15**. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

15.—Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1957-60

NOTE.—Actual expenditures 1957-59; preliminary actual 1960.

Subsection 2.—Contracts Awarded and Building Permits Issued

In this Subsection statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

16.—Value of Construction Contracts Awarded, 1925-60

Totals, 204 Municipalities	**1,636,995**	**1,382,147**

Table **19** shows the value of building permits issued in 14 metropolitan areas across Canada. In 1960 the permits issued in these areas made up over 92 p.c. of the total for the 204 municipalities.

19.—Estimated Value of Building Permits Issued in Metropolitan Areas, 1959 and 1960

Metropolitan Area	1959	1960
	$'000	$'000
Halifax	22,046	17,359
Saint John	5,348	3,269
Quebec	44,683	49,700
Montreal	362,108	290,265
Ottawa-Hull	105,372	90,187
Toronto	382,588	332,575
Hamilton	74,726	74,679
Windsor	20,162	21,538
London	40,707	30,834
Winnipeg	93,217	93,363
Calgary	107,177	73,714
Edmonton	94,632	70,096
Vancouver	160,753	109,827
Victoria	22,097	17,437

Tables **20** and **21** show the volume and value of building permits by province. These figures are useful when appraising the construction activity within and among municipalities. Comparisons of construction costs would not be warranted, however, without assurance that structures of similar size and quality were being compared. Despite limited application, this information constitutes one of the few indices of current economic activity in smaller localities.

The relative material was compiled from municipal figures and therefore varies with the terms of individual by-laws, with the methods of estimating the value of local construction and with other factors which may differ from area to area. Information is not available on the permits allowed to lapse without the relative construction being undertaken.

The indexes given in Table **22** show as far as possible the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied.

Section 3.—Housing*

Subsection 1.—Government Aid to House-Building

Federal Assistance.—The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1918, when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as "an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions". Central Mortgage and Housing Corporation, a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and co-ordinates the activities of the Federal Government in housing. The Corporation has the authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It also acts as a research agency in fields associated with housing and enters into partnership with both provincial and municipal governments to assist in housing.

In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities which rightfully belong to other levels of government or which could be borne more effectively by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of more than 4,600,000 houses have been built since the first covering legislation was enacted; about one-third of these were financed in one way or another under the Housing Acts.

Under the terms of the National Housing Act, 1954 and its subsequent amendments, the Federal Government is active in many ways.

Loan Insurance.—Mortgage loans made by approved lenders may be insured for home ownership and for rental housing. They are normally available from approved lenders (chartered banks, life, trust and loan companies) to individual home-owner applicants, to builders constructing houses for sale or for rent, to rental investors or to some special groups such as co-operative housing associations, farmers and defence workers. Upon application, the borrower pays the Corporation a fee of $35 per unit to help defray expenses incurred in the examination of plans and specifications, in the determination of lending values and in compliance inspections during construction. An approved lender may require that a home owner or home purchaser provide 5 p.c. of the value of the house from his own resources. For the home owner this equity may be in the form of cash, or a combination of cash, land and labour; for the home purchaser it is in cash. The regulations require that gross debt service—the ratio of repayments of principal, interest and taxes to the income of the borrower—should not exceed 27 p.c. Instances involving higher ratios may be considered on their merits by the approved lender and the Corporation.

The borrower pays an insurance fee which is added to the amount of the loan and is repaid over the term of the mortgage. In the case of a loan for a home-owner unit, the borrower pays a fee of 2 p.c. of the loan if mortgage advances are required during construction and 1¾ p.c. if the total loan is advanced when construction is complete. On a rental loan the borrower pays 2½ p.c. of the loan if advances are required during construction and 2¼ p.c. if the loan is not required until construction is complete. In some areas, lenders have arranged to make the inspections for progress advances.

---

* Prepared in the Information Division, Central Mortgage and Housing Corporation, Ottawa.

For single-family home ownership, loans may be up to 95 p.c. of the first $12,000 of lending value and 70 p.c. of the balance but may not exceed a total of $14,200 for a house with three or fewer bedrooms. Maximum loan for a house with more than three bedrooms is $14,900; for types other than single home-owner units, the maximum loan varies with the type of unit. Loans for rental housing may be up to 85 p.c. of the lending value of the project and are subject to maximum loan amounts on dwelling types. The maximum loan available for multiple-family dwellings is $8,750 per family unit. The period for repayment of home-owner loans must be at least 25 years (unless a lesser period is requested in writing by the borrower) and may be up to 35 years if the lender agrees. The term of rental loans may not exceed 35 years and home conversion loans 15 years, unless shorter periods are requested by the borrowers. Repayments are made in equal monthly instalments, including interest and municipal taxes. The maximum interest rate is prescribed by the Governor in Council; on Dec. 17, 1959, it was increased from 6 p.c. per annum to 6¾ p.c.

Loans.—Sect. 40 of the National Housing Act authorizes the Corporation to make any type of loan that may be made by an approved lender under Part I of the Act (home-owner, defence worker, co-operative, builder or rental) or under Sect. 15 (rental guarantee projects) where in the opinion of the Corporation a loan is not available to a satisfactory applicant through an approved lender. By Government policy, direct loans for rental guarantee projects have not been made in recent years. Loans corresponding to Part I loans have in the past been restricted in general to home ownership in the smaller urban centres. On May 22, 1958, however, direct lending was extended to include builders in any area and home owners in the larger centres, with the loans subject to size limitations which placed the houses in the small home category. Loans were made through agents of the Corporation between Sept. 3, 1957 and the suspension of the arrangements—Feb. 8, 1959 for rental loans and Apr. 10, 1959 for home-owner and builder loans. Funds that were available to CMHC under the statutory vote for direct lending purposes were fully committed in the first ten months of 1959 and it was necessary to stop accepting new applications on Oct. 30.

In January 1960, Parliament voted an additional $500,000,000 for direct lending by CMHC and indicated that $175,000,000 would be allocated during the year. Lending to prospective home owners was resumed in April and to merchant builders with commitments from *bona fide* purchasers in September.

Under the National Housing Act, the Corporation, with Government approval by Order in Council, may make a loan to a limited-dividend housing company to assist in financing the construction of a low-rental housing project or in the purchase of existing buildings and their conversion into a low-rental housing project. The dividends of the company are limited by the terms of its charter to 5 p.c. or less of paid-up share capital. A loan under Sect. 16 may not exceed 90 p.c. of the lending value which is established by the Corporation. The period for repayment may not exceed the useful life of the project and in any case may not be for more than 50 years. The interest rate is established by Order in Council. The equity must be provided by the borrowers before NHA advances can be made. The company must present evidence that conditions of shortage, overcrowding or substandard housing exist in the district. Plans and specifications must be approved by the Corporation. The borrower pays to the Corporation an application fee of $35 for each housing unit in the project. This may be reduced to $17.50 a unit if evidence is submitted that dividends payable will not be taxable under the Income Tax Act when received by the shareholders.

Limited-dividend projects are subject to proven end costs. If final costs are less than originally established, the loan is reduced proportionately. The loan is also reduced by the net revenue earned prior to the completion of construction. The borrower enters into an operating agreement with the Corporation fixing the rentals, income ranges of eligible tenants, the establishment and use of reserves and the submission of annual financial statements. Those considered eligible for accommodation are persons with incomes in the lower third of the income level of the municipality. The gross family income of ingoing tenants must not exceed the level established by the Corporation for the municipality concerned. Leases terminate automatically when income exceeds the continued occupancy limit set by the Corporation.

Projects may be designed especially for the elderly. These projects have usually been sponsored by non-profit organizations requiring no return on equity. The Corporation requires that the limited-dividend company contribute at least half of the required 10 p.c. equity. The remainder may be provided by provincial or other grants; in some provinces, provincial grants are available to non-profit organizations. The income for entry must be at least twice the shelter rent and leases terminate automatically when income exceeds five times the shelter rent that would apply with a 90-p.c. loan.

New legislation, enacted in 1960, broadened the facilities of the National Housing Act to include financial assistance to municipalities for the elimination or prevention of water and soil pollution. CMHC is authorized to make a loan to a municipality or a municipal sewerage corporation for the construction or expansion of a sewage treatment project; under the Act, a sewage treatment project consists of a trunk sewage collector system, a central treatment plant, or both, for the collection and treatment of sewage from one or more municipalities. Also included is the expansion of an existing plant or existing trunk collector sewer. The loan may not exceed two-thirds of the cost of the project and the maximum repayment term is 50 years from date of completion. The interest rate is prescribed by the Governor in Council. The agreement also contains a condition whereby 25 p.c. of the loan principal and 25 p.c. of the accrued or paid interest will be forgiven, provided the project is completed to the satisfaction of the Corporation on or before Mar. 31, 1963.

Other 1960 legislation authorizes long-term loans to universities for the construction of student residences or the acquisition of existing buildings and their conversion into a university housing project. CMHC may lend up to 90 p.c. of the project cost as agreed between the university and the Corporation, with the maximum amount limited by regulation to $7,000 per student accommodated. Term of the loan may not exceed 50 years from date of the project's completion. The interest rate, prescribed by the Governor in Council, depends on the Government's borrowing rate which changes from time to time.

Guarantees.—Since 1955, loans to assist in financing the improvement of existing houses have been available under Sect. 24 of the National Housing Act. This Section authorizes CMHC to give a limited guarantee to banks or approved instalment credit agencies in return for an insurance fee paid by the borrower on loans made for additions, repairs and alterations to his own home. A home improvement loan and the balance owing on any existing NHA home improvement loan on the property may not exceed $4,000 for a one-family dwelling or $4,000 for the first unit of a duplex, semi-detached, or multiple-family dwelling, plus $1,500 for each additional unit. Loans are repayable in monthly instalments together with interest, in not more than 10 years.

Investments.—Under Sect. 36 of the National Housing Act and complementary provincial legislation, the Federal Government and the government of a province may enter into a partnership agreement to build rental housing for families of low income. The Federal Government bears 75 p.c. of the capital costs and the provincial government the remainder, although the latter may call upon the municipality concerned to bear a portion of the provincial share. Federal-provincial rental housing projects are of two types—subsidized and full-recovery. In subsidized projects, rents are related to the tenant's family income and size of family; in full-recovery projects, rents are set at a level sufficient to amortize capital costs and to recover operating expenses.

A 1960 amendment to Sect. 36 permits the Government to supplement its federal-provincial low-rental housing program by making provision for the acquisition of existing housing stock. The amendment authorizes the Government to pay 75 p.c. of the cost of acquisition, improvement and conversion of these buildings for housing purposes. This financial assistance is available on condition that the existing accommodation is located in a section designated as an urban renewal area in an agreement between a province, a municipality in the province, and the Corporation. Balance of the cost will be shared by the participating governments in the same manner as for new housing under this Section.

Under the same Section of the National Housing Act, the Federal Government and the government of a province may also enter into an agreement to provide for a land assembly project, which involves the development of raw land for housing purposes. After subdivision planning, installation of sewer and water lines and the construction of roads and sidewalks, serviced lots are made available for sale to prospective home owners or to builders for residential construction. The Federal Government pays 75 p.c. of the costs of such projects and the province concerned pays the remainder.

Corporation Building.—The Corporation may construct and administer housing and certain other buildings on its own account and for other government departments and agencies. Its responsibilities include the provision of architectural and engineering designs, the calling of public tenders and the administration of the construction contracts—including any necessary on-site surveys and engineering. On such contracts the Corporation carries out full architectural and engineering inspections.

Grants.—The Federal Government makes financial assistance available to municipalities for the study of existing conditions and the establishment of their needs for redevelopment and housing. Under Part V of the Act, the Corporation may arrange with a municipality to undertake either a city-wide study or a study in a specific area. In the case of city-wide investigation, the Government may provide as much as 75 p.c. of the cost and up to 50 p.c. for study of a limited area. Under Sect. 23, the Government may pay up to 50 p.c. of the cost of acquisition and clearance of an area marked for renewal.

Research.—The Government's housing agency is concerned also with building technology in the formulation of standards for house construction, in the use of suitable materials and in the development of new building techniques. The Corporation has no laboratory facilities but has direct experience of performance in the field and seeks the advice of specialists in the various agencies and departments of the Federal Government in such matters. Research into the factors affecting housing is concerned with the measurement of the demand for new housing, the volume of new housing built and the supply of mortgage money for house construction. The Corporation also co-ordinates and publishes statistical information on housing. Supported by funds provided under the National Housing Act, the Canadian Housing Design Council directs a program toward the improvement of housing design in Canada.

Other Federal Legislation.—The Farm Credit Act, 1959 provides for federal long-term loan assistance for housing as well as for other farm purposes (see pp. 405-406); the Veterans' Land Act, 1942 provides a form of loan and grant assistance to veterans for housing and other purposes (see pp. 298-300); and the Farm Improvement Loans Act, 1944 (see pp. 406-407) provides for guarantees for intermediate- and short-term loans made by approved lending agencies to farmers for housing and other purposes. These three statutes are concerned only incidentally with housing. The primary provisions for housing as such are those in the NHA.

Provincial Assistance.—All provinces except Prince Edward Island have complementary legislation providing for joint federal-provincial housing and land assembly projects. In addition, separate legislation with respect to housing has been enacted by several provinces.

An Act to Improve Housing Conditions, 1948, passed by the Quebec Government, provides for a subsidy on mortgage loan interest charges in excess of 3 p.c. on new dwellings. In Ontario, the Planning Amendment Act, 1952 empowers municipalities with approved official plans to designate redevelopment areas and acquire and clear land for designated purposes. The Rural Housing Assistance Act, 1952 authorizes the establishment of a Crown company—the Rural Housing Finance Corporation—to lend and invest mortgage money for new rural housing. The Junior Farm Establishment Act, 1952 provides loans to young qualified farmers for housing and other purposes.

Four provinces have legislation enabling the governments to make grants for the construction of housing for elderly people. Manitoba provides one-third of the construction costs of a two-person unit or $1,667 per unit whichever is the lesser, and one-third of the construction costs of a one-person unit or $1,400 per unit. In addition, grants are made for the construction of hostels and existing buildings—one-third of the construction cost or $1,200 per bed for the former and one-third or $700 per bed for existing buildings.

Grants in Ontario may be made only to a limited-dividend housing company which has had a loan made to it under NHA provisions. Grants are calculated at the rate of $500 for each dwelling unit or 50 p.c. of the costs in excess of the CMHC loan, whichever is the lesser. In British Columbia, capital grants do not exceed one-third of the total cost of the project and the limited-dividend housing company must provide equity amounting to 10 p.c. of the total. In Saskatchewan, capital grants are made up to 20 p.c. of the total capital cost.

Subsection 2.—Housing Activities in 1960

In 1960, house construction in Canada dropped below the previous year's level. The total number of starts was 108,858, a decline of 23 p.c. from 1959 when 141,345 starts were reported. This indication of decreased activity should be considered in the light of conditions that had been developing during the previous two or three years and had their first visible effects on the housing market in 1960.

A major factor in housing demand is the growth and movement of population and the households of which it is made up. In the past few years this has been influenced adversely by declining immigration and the fact that the persons most likely to be marrying in these years were the children of the depression and the early war years—periods of comparatively low birth rates. As a result, the rate of increase in the number of families in Canada fell to the lowest point since World War II. Also during this same period, the advancement of per capita income slowed perceptibly and contributed to lessened demand. Again, the record volume of house-building since 1945 has contributed greatly to the improvement in housing conditions with the result that in 1960 fewer people were looking for better homes.

The decline in activity was particularly noticeable in the National Housing Act sector in which there were 33,723 starts compared with 62,333 in 1959. A very substantial increase in housing starts financed under the Act by the life insurance, trust and loan companies was not enough to offset the almost complete withdrawal of the banks and the smaller number financed by Central Mortgage and Housing Corporation as a residual lender. More than two-thirds of the 1960 housing starts were financed outside the National Housing Act; here there was a smaller decline, about 5 p.c. from the level of the preceding year. Conventional loans from institutional lending institutions provided funds for 40,116 starts, down from 45,198 in 1959. However, starts financed from all other sources, including loans from individuals and from non-institutional lenders, were up to 35,019 from 33,761 in the preceding year.

A carryover of some 82,000 units kept completions running ahead of 1959 during the early months but decreased activity during the remainder of the year brought the rate down. Final figures showed total completions for 1960 at 123,757 dwellings, a decline of 15 p.c. from 1959 when 145,671 dwellings were completed.

Operations under the National Housing Act.—In contrast to 1959 when Central Mortgage and Housing Corporation provided more than half the loan funds committed under the Act, approved lenders supplied 59 p.c. of NHA mortgage money in 1960. The life insurance, trust and loan companies approved loans totalling $232,200,000 and the chartered banks made commitments for $500,000 but cancellations of 1959 approvals exceeded new loans, reducing approved lenders' total to $231,900,000. Investment of public funds through CMHC loans totalled $161,100,000.

In 1960, 37,308 dwellings were financed under the Act. Of this number, 36,610 were financed through mortgage loans—21,156 by approved lenders' loans and 15,454 by CMHC loans. Federal-provincial partnership arrangements provided for 698 dwellings. In 1959, 58,082 units were financed under the Act.

The life insurance and trust and loan companies increased their NHA lending by 92 p.c. and, by the end of 1960, had approved loans for 21,111 dwellings compared with 11,015 in 1959. The banks made loans for 45 houses, in contrast to 14,067 in the preceding year. The substantial increase in lending by life insurance and trust and loan companies was influenced partly by a change in the NHA interest rate. Late in 1959 the maximum rate of interest was increased to $6\frac{3}{4}$ p.c. from 6 p.c. By mid-1960 there was a marked easing in the supply of mortgage credit with the result that the new rate for insured mortgages became more competitive and these lenders began investing at a greater pace.

CMHC direct loans were made to home owners for 10,168 dwellings and to merchant builders for 3,693 houses. Included in the home-owner approvals were 560 for veterans building under Part II of the Veterans' Land Act and 22 dwellings in co-operatives. In 1959, loans to owner-applicants financed 14,559 homes and builders 13,188.

In March 1960, Parliament increased the statutory provision for Corporation lending by $500,000,000 but the Government indicated commitments from these public funds should be considerably less than the $343,000,000 committed in 1959. Loan requirements were so designed that the smaller amount of public funds would serve the most urgent needs first. Eligibility was limited to applicants with annual incomes of up to $5,000, with adjustments for family size to $5,600. The direct lending program was under constant review and when it became apparent that demand in the lower income sector would not require all of the available funds, the income ceilings were raised to $7,000 and $7,600. Also, at this time builders became eligible for loans if they could provide commitments from *bona fide* purchasers. Faced with some evidence of abatement in demand among the $7,000 level, and in a move to aid winter employment, the Government, in October, removed all income restrictions and permitted builders to apply for two loans for display houses.

25.—Mortgage Loan Approvals[1] under the National Housing Act, by Month, 1956-60

Loans to Limited-Dividend Companies.—During 1960, CMHC made loan commitments to limited-dividend companies for 1,591 dwellings—680 for elderly persons and 911 for lower income families. Municipalities and charitable organizations initiated projects involving 692 units while entrepreneurs were responsible for the remainder. Because of the limited funds available for CMHC loans, some restrictions were imposed for part of the year on entrepreneur-sponsored projects.

Borrower and House Characteristics.—There were one or two children in the families of 50 p.c. of NHA borrowers in 1960, while 27 p.c. of the families had three or more children. The age of the average owner was 33 years. The cost of the average single-family house built under NHA in 1960 was $14,380. In addition, the borrower paid a mortgage insurance fee of $227, which was incorporated in the mortgage payments. The average downpayment on a house was $3,033 in 1960 and monthly payments of principal, interest and municipal taxes came to $100, representing 21.2 p.c. of the borrower's average annual income.

Some 42 p.c. of all NHA borrowers had incomes below $5,000, 49 p.c. had incomes between $5,000 and $7,999 and the remainder had incomes of $8,000 or more. The average income of all NHA borrowers was $5,620, compared with $5,716 in 1959.

Construction costs of houses on which loans were approved under the Act in 1960 declined for the first time since the War. The decline from 1959 to 1960 was from $10.78 per sq. foot to $10.60 per sq. foot. Land costs were also down from $2,533 to $2,473. These lower costs more than offset an increase in the average size of dwelling from 1,108 to 1,125 sq. feet. The reduction in costs in 1960 was associated in part with the decline in building material prices during the year but perhaps of greater importance was the increased competitiveness of the housing market during the year

Home Improvement Loans.—In 1960 the banks approved 23,580 home-improvement loans for a total of $30,100,000. Although eligibility for these NHA-guaranteed loans was extended to owners of rental properties, the 1960 total fell below that of the preceding year when 32,523 loans for $37,500,000 were approved.

Loans for University Housing Projects.—On Dec. 2, 1960, the National Housing Act was amended making provision for Corporation loans to universities to assist in the construction of living accommodation for resident students. Six preliminary applications and two formal applications were received by the year-end.

Loans for Municipal Sewage Treatment Projects.—The Dec. 2 amendment also authorized the Corporation to make loans to municipalities or municipal sewerage corporations to assist in the construction of sewage treatment projects for the control of water and soil pollution. During December, more than 60 municipalities made inquiries regarding loans and six applications were received by the Corporation.

Urban Renewal.—Federal contributions were approved in 1960 to assist the Cities of Saint John, Sarnia and Vancouver in the redevelopment of blighted areas. The grants, covering one-half the cost of acquiring and clearing the three areas, amounted to approximately $5,800,000. Revenue derived from the use of the cleared land is shared by participating governments in proportion to their financial assistance.

Federal grants amounting to $150,000 were approved to aid housing studies in Corner Brook, Montreal, Port Moody, Prince Rupert and Churchill. The studies are designed to identify substandard areas and to formulate proposals for the solution of problems attributable to blight. Since 1955 when the first study was undertaken, 33 have been initiated.

Federal-Provincial Projects.—During 1960, approval was given to federal-provincial partnership arrangements for public housing projects in Saint John, Halifax and at two locations in Vancouver. These four projects will provide a total of 698 low-rental dwellings. From 1950 when the first project was approved under federal-provincial arrangements to the end of 1960, a total of 9,610 units in 81 projects have been approved. In 1960, approval was given for the acquisition of 363 lots in land assembly projects and 652 serviced lots were sold; the latter figure brings to 8,588 the number of lots serviced and sold.

Housing Research and Community Planning.—The Canadian Housing Design Council received federal support under the National Housing Act to continue its activities in the field of improved housing design. In 1960, the Council once again conducted competitions in the fields of single-family house design and house grouping. In addition, the Council received grants to publish a study of new methods of providing housing in greater density, at the same time retaining some of the characteristics and scale of single-family houses. Funds were also provided to assist a study of the garden-court house. Five travelling scholarships were awarded under the Act to final-year architectural students who made a study of housing design and construction in Canada and the United States.

The Corporation continued its support of the Community Planning Association of Canada and provided fellowships and bursaries for scholars in the fields of housing, planning and urban development. Financial assistance was also given to the four Canadian universities offering professional planning courses. The Royal Architectural Institute of Canada was given a grant to assist in the production of the Report of the Committee of Inquiry into the Design of the Residential Environment.

Section 1.—The Government in Relation to Labour

Subsection 1.—Federal Labour Legislation

The federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

The statutory duty of disseminating information concerning labour and industrial matters is set out in the Department of Labour Act passed in 1909. In addition, the Minister is responsible for the administration of the following statutes: Conciliation and Labour Act (1906); Government Annuities Act (1908)†; Government Employees Compensation Act (1918); Fair Wages and Hours of Labour Act (1935); Unemployment Insurance Act (1940); Vocational Training Co-ordination Act (1942); Reinstatement in Civil Employment Act (1946); Merchant Seamen Compensation Act (1946); Industrial Relations and Disputes Investigation Act (1948); Canada Fair Employment Practices Act (1953); Female Employees Equal Pay Act (1956); and Annual Vacations Act (1958).

Fair Wages Policy.—The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour

---

* Except as otherwise noted, this Chapter has been revised under the direction of the Deputy Minister of the Department of Labour, Ottawa.

† Statistics and details of administration under this Act are given in Chapter XXIV on Insurance.

Act and Order in Council P.C. 2029 of Dec. 22, 1954. Hours of work on construction contracts are limited to eight per day and 44 per week, except in an emergency or in exceptional circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council P.C. 2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

*Government Prevailing Rate Employees.**—Many departments and agencies of government employ non-office workers in public buildings, defence establishments, parks and forests, experimental farms, canal operation, airports and government vessels, survey parties, special projects, etc. Such positions are exempt from the operations of the Civil Service Act and rates of pay are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the employment area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour and wage research conducted by the Economics and Research Branch as well as from collective agreements and information supplied by some provincial Departments of Labour.

The Fair Wages and Prevailing Rates Division of the Industrial Relations Branch also recommends rates of pay for 4,000 commissionaires employed by various government departments and agencies throughout Canada, provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc., for (1) prevailing rate workers generally employed, (2) ships' officers and (3) ships' crews.

The Industrial Relations and Disputes Investigation Act.—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are set down in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

---

* Statistics on numbers and earnings of prevailing rate and other groups of federal employees exempt from the Civil Service Act are given at pp. 118-128.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, from Sept. 1, 1948 to Dec. 31, 1960, the Canada Labour Relations Board received 1,214 applications for certification, 707 of which were granted, 239 rejected, 238 withdrawn and 30 were pending at the end of the period. Of the 752 industrial disputes dealt with under the conciliation provisions of the Act, 659 were settled by conciliation officers and conciliation boards, 48 were not settled, 18 lapsed and 27 were pending at Dec. 31, 1960.

Labour-Management Co-operation Service.—During World War II, production committees based on the principle of joint consultation between labour and management were established in many vital industries. Since 1947 the establishment of labour-management production committees in industry has been encouraged and assisted by the Labour-Management Co-operation Service, a division of the Industrial Relations Branch of the Department of Labour. The number of active committees has grown from 526 in 1947 to approximately 1,652 at Dec. 31, 1960. Their activities are directed toward such objects as better understanding between management and labour, improved production efficiency, improved quality, reduction of waste, accident prevention, good housekeeping and reduction of absenteeism.

Reinstatement in Civil Employment Act.—This Act provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons. It was originally passed in 1942, revised in 1946, and broadened in its application in 1954. The Act is administered by the Minister of Labour through the National Employment Service (see p. 762).

Canada Fair Employment Practices Act.—This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction—those covered by the Industrial Relations and Disputes Investigation Act (see pp. 719-720). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies that practise discrimination; and of advertisements or inquiries in connection with employment that express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.—This Act came into effect on Oct. 1, 1956, and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Annual Vacations Act.—This Act was passed in January 1958 and became effective by proclamation on Oct. 1, 1958. It provides a one-week vacation with pay for the first year of employment and a two-week vacation for subsequent years. Vacation pay is computed at 2 p.c. of wages, as defined in the Act, for a vacation of one week and 4 p.c. for a vacation of two weeks.

Subsection 2.—Provincial Labour Legislation

Because of the authority given by the British North America Act to provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights, there is a large body of provincial labour legislation dealing with relations between employers and employees and the trade unions representing employees, working conditions, qualifications of tradesmen, compensation for work accidents, and other matters. In each province a Department of Labour is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a board appointed by the Lieutenant-Governor in Council.

Factory legislation and shops legislation in several of the provinces prohibit child labour, regulate the hours of work of women and young persons, and contain provisions to ensure the safety and protect the health of employees in industrial and commercial establishments. All provinces have minimum wage legislation, and most have legislation establishing maximum working hours in at least some types of employment. The industrial standards legislation in Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan and Alberta enables the wages and hours of work agreed upon at a conference of representatives of employers and employees in designated trades to be made the minimum standards throughout the trade concerned in specified areas. The Quebec Collective Agreement Act permits certain terms of collective agreements between employers and trade unions to be made binding on all in the industry throughout the province or in a defined area.

In all provinces there is legislation to protect freedom of association, to promote collective bargaining and to assist in the settlement of industrial disputes. Nine provinces have legislation dealing with apprenticeship and all have legislation providing for the licensing of certain classes of workmen. Seven provinces have equal pay laws, and six have fair employment practices Acts prohibiting discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. All have workmen's compensation laws.

Provincial labour legislation enacted in 1960 is outlined in the following paragraphs.

Newfoundland.—The *Labour Relations (Amendment) Act, 1960* amended the provision enacted in 1959 under which the Lieutenant-Governor in Council was empowered to dissolve any trade union in the province that was a branch, local or affiliate of a trade union organization outside the province, where, in the opinion of the Lieutenant-Governor in Council, a substantial number of the superior officers, agents or representatives of such a trade union organization had been convicted of any heinous crime and retained their positions in the union organization. The 1960 amendment transferred the power of dissolution from the Lieutenant-Governor in Council to the Supreme Court of Newfoundland acting upon an application of the Attorney General. Dissolution would become effective three months from the date of the order and only if the trade union in that period had not severed its connection with the outside organization. Provisions requiring the Labour Relations Board to decertify a union on the grounds that any of its officers had been convicted of offences in connection with labour disputes, or where a judgment had been entered against the union for tortious acts, were repealed.

A new provision relates to the situation arising from the transfer of ownership of a business. A bargaining agent that was certified in respect of the employees before the transfer continues to be the bargaining agent within the meaning of the Act, and a collective agreement concluded between the bargaining agent and the former owner is binding on the new owner.

A change was also made with respect to the conditions under which a clause in an agreement requiring union membership as a condition of employment may be implemented by an employer. Notwithstanding the terms of an agreement, an employer may employ a person who is otherwise qualified for employment and who has applied for but been refused membership in the union.

The section requiring every collective agreement to include a provision for final settlement of disputes arising out of the agreement was revised by prescribing in the Act an arbitration clause that will be deemed to be a term of an agreement where the Board finds that no procedure, or no adequate procedure, has been provided. The prescribed clause requires the setting up of a three-man arbitration board to deal with any dispute arising out of the interpretation, application, administration or alleged violation of the agreement, including any question as to whether a matter is arbitrable.

The *Trade Union Act*, passed in 1960, requires trade union locals in Newfoundland to register with the Registrar of Trade Unions in the provincial Department of Labour. Before a union can apply for registration it must appoint three union members as trustees in whom will be vested the real and personal property of the union for the use and benefit of the members. With the application for registration the union must file a copy of its constitution, which must contain comprehensive rules for the government, regulation, conduct and management of the union. Copies of the rules and of the union's annual financial statement are to be supplied by the union to its members. Annual returns must also be filed by the union with the Registrar, showing the trustees and officers and an audited financial statement.

If the Registrar believes that a union is not complying with its rules or with the Act, he may carry out such investigation as he deems fit. If a union has violated its rules or the Act, he may suspend or cancel the certificate. A union may appeal from the Registrar's decision to the Supreme Court.

The *Logging Camps Act, 1960* replaces earlier legislation dealing with the establishment and operation of logging camps. It requires logging camps to be so located, constructed and used as to provide for the well-being, reasonable comfort and safety of the loggers, and authorizes the making of regulations specifying health and safety standards. Regulations have since been issued under the Act.

The *Regulation of Trade Schools Act, 1960* requires the registration with the Minister of Education of private schools giving instruction in specified trades, and provides for regulation and inspection of such schools.

Prince Edward Island.—The *Minimum Wage for Men Act* gives the Labour Relations Board of the province authority to fix minimum wage rates for male employees, subject to review by the Minister of Labour. The Board previously had such authority, under legislation adopted in 1959, to fix minimum rates for women. No rates have yet been set.

An amendment to the *Workmen's Compensation Act* increases the sum payable for funeral expenses of a work accident victim from $200 to $300 and provides for payment of up to $100 for transporting the body of the workman to the place of burial. The minimum payment for total disability is increased from $15 to $20 per week.

The *Trade Union Act* was amended to exclude from the operation of the Act an employer who carries on business of a seasonal nature which does not require general employment for a period of more than six continuous months in a calendar year. Another change establishes a procedure for revoking the certification of a trade union that no longer represents a majority of the employees concerned.

Nova Scotia.—The *Workmen's Compensation Act* was amended to extend the coverage and increase compensation. Permanent partial disability pensions paid under the Act are now based on 75 p.c. of earnings, regardless of when the accident occurred.

New Brunswick.—The *Elevators and Lifts Act*, brought into force June 1, 1961, provides for uniform standards throughout the province for passenger and freight elevators and other lifting devices, and for a provincial system of inspection under the Minister of Labour.

An amendment to the *Workmen's Compensation Act* increases the monthly payment to the widow of a deceased workman from $50 to $60. The increase is made applicable to existing pensioners.

Quebec.—An amendment to the Quebec *Labour Relations Act*, effective Jan. 5, 1960, strengthens the Act's prohibition of discrimination for union activity by providing that an aggrieved employee may bring his case to the Quebec Labour Relations Board. The Board, if the complaint is found to be valid, may order the employer to reinstate the employee with pay for lost time. The amendment also provides for a larger Board and specifically states the principle of equal representation of management and labour on the Board.

The *Workmen's Compensation Act* was amended by raising the maximum annual earnings on which compensation is based from $4,000 to $5,000, increasing widows' pensions from $55 to $75 a month, and increasing the allowances for dependent children from $20 to $25 (orphans from $30 to $35). Funeral benefits are increased from $200 to $400, and the lump sum payable to the widow from $200 to $300.

Ontario.—Following an extensive inquiry by a Select Committee of the Legislature, the *Labour Relations Act* was substantially amended, effective Oct. 22, 1960. Provision is now made for the appointment by the Lieutenant-Governor in Council of one or more jurisdictional disputes commissions to deal with complaints arising out of a work assignment; such a commission may make an interim order settling the work assignment issue, which order must be complied with, but there is provision for a review by the commission with full hearing of all parties concerned, and for appeal to the Labour Relations Board from a final direction of the commission. Another amendment gives to the parties to a contract negotiation dispute the means of referring their dispute to a mediator of their own choosing. Where the parties are entitled to conciliation services under the Act, they may request the Minister of Labour to appoint a mediator, whom they have selected, to discharge the functions of both a conciliation officer and a conciliation board. A new provision dealing with arbitration of disputes arising out of a collective agreement seeks to eliminate delays, gives arbitrators new powers of investigation and inquiry, and provides that arbitrators' decisions, filed with the Registrar of the Supreme Court, will be enforceable as an order of the court.

The Labour Relations Board is given new authority to deal with a complaint from any person that he has been refused employment, discharged, discriminated against, coerced, or otherwise dealt with contrary to the Act. If the Board finds that the complaint is justified, it may order remedial action, and the Board order, filed in the office of the Registrar of the Supreme Court, will become enforceable as an order of that court. A new provision was added, restricting activities associated with an illegal strike, to the effect that "no person shall do any act if he knows or ought to know that, as a probable consequence of the act, another person or persons will engage in an unlawful strike or an unlawful lockout".

Three new provisions relate to internal affairs of trade unions: (1) if a provincial, national or international trade union establishes a trusteeship over a subordinate body in the province, it is required to report its actions to the Board, along with a statement setting out the terms under which supervision or control is to be exercised; a trusteeship may be established for a period not longer than 12 months and may be extended for an additional period of 12 months with the consent of the Board; (2) every trade union, upon the request of a member, is required to furnish him with a copy of the union's audited annual financial statement; and (3) a strike vote taken by a union must be conducted by secret ballot.

The *Judicature Act* was amended to provide that an interim injunction in a labour dispute may be granted without a hearing of both parties only where the court is satisfied that a breach of peace, injury to a person, or damage to property has occurred or is likely to occur. Normally, an interim injunction will be granted only following a hearing, with two days' notice to the persons affected; as before, an interim injunction is limited to four days' duration.

The *Employment Agencies Act, 1960* replaces earlier legislation regulating private employment agencies. The new Act applies to agencies engaged in the business of procuring persons for employment and employment for persons, for a fee or other remuneration, and also to the business of counselling or testing persons for a fee to assist them in securing employment. Agencies subject to the Act are required to have an annual licence issued by the Ontario Supervisor of Employment Agencies. Regulations are laid down respecting licences and maximum fees that an agency may charge for its services.

An Act to amend the *Workmen's Compensation Act* makes the current rates of compensation to dependants of a deceased workman apply to all dependants in receipt of compensation, regardless of the date of the accident.

Manitoba.—An amendment to the *Wages Recovery Act* raises from $200 to $500 the maximum amount of unpaid wages that may be recovered under the Act in summary proceedings before a Justice of the Peace.

An amendment to the *Workmen's Compensation Act* makes provision for a monthly payment not exceeding $75 to a wholly dependent mother of a deceased workman. Previously the Workmen's Compensation Board was empowered to make an award proportionate to the pecuniary loss sustained, subject to specific maximum amounts. All persons in this category in receipt of benefits when the Act came into force are eligible for the new allowance.

Saskatchewan.—The *Annual Holidays Act* was replaced by a new Act consolidating the amendments made in the past several years and introducing minor changes for purposes of clarification. The basic requirement of the Act, that an employee is entitled to a vacation with pay of two weeks after a year of employment and to three weeks after five years, was unchanged.

Alberta.—Part V of the *Alberta Labour Act*, which is the labour relations law of the province, was substantially amended. A new provision authorizes the Lieutenant-Governor in Council to declare by proclamation that normal procedures in disputes in certain essential services are to be replaced by emergency procedures. Such a declaration may be made when, in the opinion of the Lieutenant-Governor in Council, life or property would be in serious jeopardy, due to a labour dispute, by reason of a breakdown in the supply of water, heat, electricity or gas to the public, or by reason of a stoppage of hospital services in any area. After the declaration, any strike or lockout or other action in the labour dispute otherwise authorized or permitted under the Act becomes illegal. The Minister of Labour is forthwith to establish a procedure to assist the parties to the dispute to reach a settlement and is empowered "to do all such things as may be necessary to settle the dispute", and in the meantime the *status quo* is to be maintained, except that the employer, with the consent of the bargaining agent, may give effect to a proposed change in wages and hours.

A change in the Act makes it an unfair labour practice on the part of an employee to refuse to perform work for his employer, or for an officer or representative of a trade union to encourage or consent to such refusal, because of a dispute over work assignment. Another amendment aimed at preventing picketing in support of an illegal strike provides that where a strike is illegal no trade union or member of the trade union or other person shall "dissuade or endeavour to dissuade anyone" from entering an employer's place of business, or from dealing in or handling the products of any person, or doing any business with any person.

The *Judicature Act* was amended to specify the conditions under which interim injunctions may be issued to restrain actions in connection with a strike or lockout. In all cases an opportunity must be given for a hearing. The period of notice must be sufficient to enable the person served to attend and in no case may be less than three hours. A new provision requires a bargaining agent to distribute to its members a copy of the union's annual financial statement.

British Columbia.—An amendment to the *Metalliferous Mines Regulation Act* makes a number of general changes in the system of supervision to ensure safe work practices, and in certain safety rules. A new provision requires that every person employed underground in a mine must be under the supervision of a person who holds a shiftboss certificate issued by a Board of Examiners appointed under the Act. An applicant for a shiftboss certificate must have at least three years of practical mining experience, or a mining engineering degree from a university approved by the Board and one year of mining experience, and he must have a thorough knowledge of the rules established by the Act and of safe working practices.

Regulation of Wages and Hours of Labour under Industrial Standards Legislation and the Quebec Collective Agreement Act.—The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan and the Labour Act of Alberta provide that wages and hours agreed upon at a conference of representatives of employers and employees, called by the Minister of Labour or his representative, may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In *Nova Scotia*, 13 schedules of hours and wages for individual building trades were in force during the year ended Mar. 31, 1959.

In *New Brunswick*, four schedules for individual building trades were in force during the year ended Mar. 31, 1959.

In *Quebec*, under the Collective Agreement Act, hours and wages and also apprenticeship, vacations with pay and family allowances provisions, established by a collective agreement voluntarily entered into by employers and unions or groups of employees, may be made legally binding by Order in Council on all employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1959, 103 agreements covering 220,973 workers and 29,191 employers had been generalized to apply either throughout the province or to a certain district. The agreements in force throughout the province apply to the following industries: building materials, the manufacture of women's coats and suits, dresses, millinery, women's handbags, men's and boys' clothing, men's and boys' hats and caps, men's and boys' shirts, fine gloves and work gloves, shoes, furniture, paint, corrugated and uncorrugated paper boxes, the tanning industry and the casket manufacturing industry. Other agreements concern industries in particular cities or parts of the province, including all building trades and printing trades in large urban centres and many rural districts.

In *Ontario*, there were 135 wages and hours schedules in force at Mar. 31, 1959. Throughout the province, schedules were in effect for the women's coat and suit industry, the men's and boys' clothing industry, men's and boys' hats and caps, the millinery industry and the hard furniture industry. In the construction industry, 58 schedules, each for a single trade in a single locality, covered one or more trades in 27 zones. Four schedules were in effect for certain zones in the retail gasoline service industry, and barbers had schedules in 67 zones.

In *Manitoba*, the Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking except agriculture. Orders in Council under this legislation have been passed fixing wages and hours in the barbering and hair-dressing trades. A schedule for the construction industry applies to private construction work in the larger centres of population as well as to public construction work throughout the province.

In *Saskatchewan*, 17 schedules were in effect at Mar. 31, 1959. The schedule for barbers covered the whole province; others applied to bakers and bakery salesmen, carpenters, electrical workers, painters, and beauty culture operators in one or more areas.

In *Alberta*, 30 schedules were in effect during 1959. These governed, in one or more areas, bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service-station workers, radio service, laundry and dry-cleaning employees and barbers.

Regulation of Hours and Annual Holidays.—Five provinces—Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—have statutes that either place absolute limits on working hours or require time and one-half the regular rate to be paid if work is continued after specified limits. There is, in addition, an Act of limited application in Quebec. In the provinces that have no special hours-of-work legislation, the only statutory regulation of hours, apart from that described above under the Industrial Standards Acts and the Quebec Collective Agreement Act, is that imposed by factories Acts, mines Acts and, in Newfoundland, legislation governing shops. In New Brunswick and Quebec the limits imposed by the factories Acts apply only to women and boys under 18 years of age. Several minimum wage Acts give authority for the regulation of hours as well as of wages.

In Ontario there is a maximum eight-hour day and 48-hour week with certain exceptions. In Alberta the maximum daily and weekly hours in the cities of Calgary, Edmonton, Lethbridge and Medicine Hat are eight and 44; in the remainder of the province they are eight and 48. In British Columbia hours are limited to eight in a day and 44 in a week. In these three provinces the Acts apply to most workers except farm labourers and domestic servants. In Saskatchewan the Act requires time and one-half to be paid for work after eight hours daily and 44 hours weekly and applies to workers in all industries except agriculture and domestic service. A Manitoba Act covering most industrial workers in the province requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men and 44 hours for women. In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

Seven provinces—Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—have legislation in effect providing for annual holidays with pay for workers in most industries, and New Brunswick has legislation requiring annual holidays in the mining and construction industries and for fish, fruit and vegetable packers. In all these provinces, except British Columbia, Saskatchewan and Manitoba, workers are entitled to a one-week holiday with pay after a year of employment. A two-week holiday is given in British Columbia, Saskatchewan and Manitoba after a year of employment and in Alberta after two years except in the case of workers in the highway, pipeline and heavy construction industries who are entitled to a two-week vacation after one year of service. A three-week holiday is required in Saskatchewan after five years of service with the same employer. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for each month. Coal miners in Alberta are entitled to a one-day holiday with pay for every 20 days worked in a month but not more than two weeks in a year.

Farm workers are excluded from the holiday provisions in all provinces, and domestic servants in all but Manitoba and Saskatchewan. In addition, Quebec exempts public corporation employees, salesmen, janitors and watchmen, and certain part-time workers; Ontario exempts professional workers, salesmen, and funeral directors and embalmers; Manitoba and Saskatchewan exempt ranch and market garden employees, and British Columbia exempts professional workers and horticultural workers.

Minimum Wage Regulations.—In Nova Scotia the minimum wage law applies only to women. In Ontario, though the Act applies to both sexes, Orders apply only to women. In Newfoundland, New Brunswick and Alberta there are separate Orders for men and women and lower rates are set for women. In British Columbia all but a few Orders set the same rates for men and women. In Manitoba, Quebec and Saskatchewan all Orders and the rates set apply to both sexes.

Table 1 shows the minimum rates in effect in December 1960 for several classes of establishment in the principal cities. In Newfoundland, New Brunswick, Saskatchewan and British Columbia the rates set are for the entire province. Elsewhere rates vary according to zone.

[1] In hotels and restaurants, the rates apply to a maximum of 54 hours per week. [2] Applies only to canning or processing of fish, vegetables or fruit. [3] Chauffeurs, watchmen, stationary enginemen and firemen 70 cents; bell boys 56 cents. [4] Dollars per week.

Section 2.—The Labour Force*

The current pace of economic activity in Canada necessitates constant planning and study. To the labour leader, the business man, the social administrator and the legislator, this pace requires a continuous process of plan-revision. To provide up-to-date and reliable information concerning the Canadian labour force, a current and periodic analysis of the state of employment in Canada was organized. A labour force survey, on a sample basis, was conducted in the autumn of 1945 and quarterly surveys were carried on until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample covers over 35,000 households in more than 160 different areas of Canada. The estimates of the labour force are restricted to the civilian labour force; net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions and Indians living on reserves are excluded.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during the week preceding the beginning of interviewing for the survey. The main divisions of the population are defined as follows:—

> **Labour Force.**—The civilian labour force is composed of that portion of the civilian non-institutional population 14 years of age or over who, during the survey week, were employed or unemployed.
>
> **Employed.**—The employed include all persons who, during the survey week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job but were not at work because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the survey week and who also looked for work are included in the unemployed as persons without work and seeking work.
>
> **Unemployed.**—The unemployed include all persons who, through the survey week: (a) were without work and seeking work, i.e., did no work during the survey week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.
>
> **Not in the Labour Force.**—Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those going to school, keeping house, too old or otherwise unable to work, and voluntarily idle or retired. Housewives, students and others who worked part-time are classified as employed. If they looked for work they are classified as unemployed.

The estimates derived from the labour force surveys are subject to sampling error. In general, the percentage of error tends to decrease as the size of the estimate increases. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than shown below.

Size of Estimate	*Sampling Variability*
50,000	8,000
100,000	11,000
500,000	24,000
1,000,000	33,000
5,000,000	58,000

---

* Prepared in the Special Surveys Division, Dominion Bureau of Statistics.

2.—Estimates of the Civilian Labour Force and its Main Components, Annual Averages, 1946-60

Note.—Annual averages for 1946-52, inclusive, are based on estimates from quarterly surveys and those for 1953-60 on monthly estimates. Figures do not include inmates of institutions and Indians on reservations. Newfoundland is included from 1950 only.

Year	Civilian Population (14 years of age or over)	Civilian Labour Force (14 years of age or over)							Persons not in the Labour Force (14 years of age or over)
		Employed					Unemployed	Total Labour Force	
		Non-agriculture			Agriculture	Total (employed)			
		Paid Workers	Other	Total (non-agriculture)					
	'000	'000	'000	'000	'000	'000	'000	'000	'000
1946	8,779	2,990	490	3,480	1,186	4,666	163	4,829	3,950
1947	9,007	3,156	555	3,711	1,122	4,832	110	4,942	4,065
1948	9,141	3,234	545	3,779	1,096	4,875	114	4,988	4,153
1949	9,268	3,298	539	3,837	1,077	4,913	141	5,055	4,213
1950	9,615	3,411	547	3,958	1,018	4,976	186	5,163	4,453
1951	9,732	3,623	535	4,158	939	5,097	126	5,223	4,509
1952	9,956	3,755	523	4,278	891	5,169	155	5,324	4,632
1953	10,164	3,842	535	4,377	858	5,235	162	5,397	4,767
1954	10,391	3,840	525	4,365	878	5,243	250	5,493	4,898
1955	10,597	4,027	519	4,546	819	5,364	245	5,610	4,987
1956	10,805	4,286	523	4,809	776	5,585	197	5,782	5,023
1957	11,108	4,440	542	4,981	744	5,725	278	6,003	5,105
1958	11,357	4,454	529	4,983	712	5,695	432	6,127	5,230
1959	11,562	4,615	548	5,163	692	5,856	373	6,228	5,334
1960	11,789	4,727	553	5,280	675	5,955	448	6,403	5,386

Characteristics of the Civilian Labour Force, 1946-60.—During the year 1960, the civilian non-institutional population 14 years of age or over averaged 11,789,000, a growth of 34.3 p.c. since 1946. The labour force increased 32.6 p.c. from 1946 to an estimated total of 6,403,000 in 1960. This somewhat slower growth of the labour force is reflected in the labour force participation rate; in 1960, the proportion of the population 14 years of age or over in the labour force was 54.3 p.c. compared with 55.0 p.c. in 1946. The chief factors contributing to the decrease in the labour force participation rate were a higher average school-leaving age for children, a higher proportion of persons 65 years or over in the population, and a lower average retirement age. The net effect of these factors was reduced by the higher proportion of women having jobs outside the home.

There were 5,955,000 persons employed in 1960, an increase of 27.6 p.c. since 1946. Employment in agriculture, which averaged 1,186,000 in 1946, declined by 43.1 p.c. to 675,000 in 1960. At the same time, employment in non-agricultural industries increased 51.7 p.c. from 3,480,000 in 1946 to 5,280,000 in 1960; non-agricultural paid workers increased 58.1 p.c. from 1946 to 1960. The level of unemployment fluctuated greatly during the years since 1946; in that year, the unemployment rate averaged 3.4 p.c. of the labour force, compared with 7.0 p.c. in 1960.

In 1960, the number of persons outside the labour force averaged 5,386,000, an increase of 36.4 p.c. over the 1946 figure of 3,950,000. This increase, relatively greater than that of the total population 14 years of age or over, was effected by the same factors that contributed to the decrease in labour force participation over the same period. Participation by males 14 years of age or over in the labour force declined from 85.2 p.c. in 1946 to 80.8 p.c. in 1960. On the other hand, the proportion of females of working years in the labour force went up from 24.7 p.c. in 1946 to 28.0 p.c. in 1960. Married women constituted 45.7 p.c. of all employed women in 1960 compared with 27.2 p.c. in 1946.

As a proportion of the population 14 years of age or over, men and women both showed large decreases in agricultural employment and substantial increases in non-agricultural employment, in unemployment, and in students attending school. The proportion of women keeping house in their own homes was 63.2 p.c. in 1946, rose to 66.7 p.c. in 1953 and then declined to 60.9 p.c. in 1960.

The distribution of the employed by industry group has changed considerably since 1946. As a percentage of the total, employment in service increased from 16.8 p.c. in 1946 to 24.6 p.c. in 1960, in trade from 12.3 p.c. to 16.5 p.c., and in construction from 4.8 p.c. to 7.0 p.c. In agriculture, employment dropped from 25.4 p.c. of the total employed in 1946 to only 11.3 p.c. in 1960. A similar pattern of change was evident in the industrial distribution of employed men. For women, the most notable changes occurred in service, where the proportion of total employed women increased from 33.4 p.c. in 1946 to 46.1 p.c. in 1960, in agriculture where the proportion dropped from 14.8 p.c. to 3.1 p.c. over the 15 years, and in manufacturing which accounted for 23.7 p.c. of total female employment in 1946 compared with 19.0 p.c. in 1960.

3.—Percentage Distribution of the Population 14 Years of Age or Over in the Labour Force and Non-labour Force Categories, by Sex, 1946-60

Note.—Percentages are annual averages; those for 1946-52, inclusive, are based on estimates from quarterly surveys and those for 1953-60 on monthly estimates. Newfoundland included from 1950 only.

Sex and Year	Population (14 years or over)	Percentage Distribution of the Population 14 Years of Age or Over							
		Labour Force				Not in Labour Force			
		Employed		Unemployed	Total	Women Keeping House	Persons Going to School	Other	Total

Section 3.—Employment, Earnings and Hours*

Subsection 1.—Historical Commentary

Monthly reports on employment have been furnished for many years to the Dominion Bureau of Statistics by establishments usually employing 15 persons or over in the following major industrial divisions: forestry; mining; manufacturing; construction; transportation, storage and communication; public utility operation; trade; finance, insurance and real estate; and certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, recreational and business services. The surveys relate to all sectors of the eight industrial divisions first named. To supplement the employment record that goes back to 1921, monthly statistics of weekly payroll disbursements have been prepared since 1941, permitting calculation of per capita weekly wages and salaries. Subsequently, these series were carried back, on an annual basis only, to 1939.

The current survey was further extended in the late months of 1944 to include information on earnings and hours of wage-earners for whom industrial establishments can furnish statistics of hours actually worked and paid for during periods of absence. Commencing in 1946, monthly figures of employment have been published separately for men and women. Additional and more detailed data on earnings and hours of work of both wage-earners and salaried employees are collected annually from manufacturers for the last week in October; this series yields separate figures for men and women in the two categories.

The statistics obtained monthly since 1941 relate to all paid workers on the staffs of respondents and their pay for services rendered or during paid absences in their last pay periods in the month, except that casual employees on strength for less than one day in the pay period are omitted. Statistics for owners are excluded by definition, even though they receive part of the return on their investment in the form of salaries. The earnings include wage and salary payments for straight-time and overtime work, shift differentials, regularly paid production, incentive and cost-of-living bonuses and commissions. Payrolls and hours reported for periods exceeding one week are reduced to weekly equivalents.

Although the surveys are restricted to establishments usually employing 15 persons or more, they include high but variable proportions of all paid workers at work in the covered industries as enumerated in the 1951 Census. The estimates of coverage in Canada range from 45 p.c. in the included service groups to 92 p.c. in manufacturing and 96 p.c. in mining, with the industrial composite figure relating to 79 p.c. of the total number in the industries surveyed. It is also estimated that the establishments contributing to the monthly record employed 62 p.c. of the total number of paid workers enumerated in all industries, including those in agriculture, fishing and trapping, education, health, government and other services excluded from the surveys, as well as employees of small establishments in the covered industries for which monthly data are not obtained.

The general level of industrial employment changed little in 1960 from a year earlier, the monthly index numbers (1949 = 100) averaging 118.7, down 0.8 p.c. from the 1959 figure of 119.7. Declines were recorded for workers of both sexes, but because employment generally was better maintained in industries employing large staffs of women, the index number for such workers fell to a lesser extent than that for men, and the proportion of women rose very slightly in 1960. Since 1957 when employment in the industries surveyed reached its peak, the index for men declined from 122.3 to 117.4 in 1960, and the index for women from 123.7 to 123.1.

The contraction in the industries surveyed took place mainly in the goods-producing industries, forestry being the only major industrial division in this category to report improvement over 1959. The annual average index numbers for mining, construction and manufacturing showed percentage losses exceeding that recorded in the industrial composite figure. The movements in the service-producing industries showed more variation. Employment declined slightly in public utility operation, and fell by 2.8 p.c. in transportation, storage and communication, the reduction in the latter group being recorded largely in rail transportation. The other groups in this category—trade, finance, insurance and real estate, and the service industries surveyed—all reported moderate expansion in employment.

---

* Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

At 210.9, the composite index number of weekly payrolls was the highest on record in 1960, 2.5 p.c. above the 1959 index. There was an increase of 3.2 p.c. in the general average of weekly wages and salaries in the year, bringing the figure to $75.83. The 1960 index number of per capita earnings stood at 176.5 (1949 average = 100) compared with 171.0 a year earlier. The movement of this index has been steadily upward in the period for which statistics are available, i.e., from 1939.

Subsection 2.—Employment and Weekly Wages and Salaries, 1960

The small decline in the general index of employment in 1960 resulted largely from lower indexes for Ontario and the western provinces. There was virtually no change in the average of the Quebec index numbers as compared with a year earlier and, except in Nova Scotia, the situation was somewhat better in the Atlantic region. A reduction of 1.7 p.c. was recorded in Ontario, where staffs reported in manufacturing were reduced by 2.7 p.c., with most major groups in the division sharing in the downward movement. Employment in mining and construction fell by over 5 p.c. On the other hand, the trend was moderately favourable in forestry, trade, finance, insurance and real estate, and in the service industries surveyed. In the Prairie Provinces, Saskatchewan reported the largest percentage loss, in which slackness in transportation was an important factor. The index for British Columbia showed only a small decline.

Employment by Industry.—The 1960 index number for manufacturing was lower by 1.4 p.c. than in 1959. This decline was smaller than the declines indicated in 1954 and 1958, the other years within the decade in which a contraction was shown in the year-to-year comparison. Most of the reduction in 1960 took place in the heavy manufacturing industries, which showed a general loss of 2.5 p.c., as compared with one of 0.5 p.c. in plants producing non-durable goods. There was general curtailment in the former category, all major components except non-ferrous metal products reporting smaller working forces. Industrial disputes contributed to the losses in iron and steel, although in the general situation these were a factor of much less importance than in 1959. Within the light manufacturing group, continued expansion in employment in paper products, chemicals, printing and publishing and miscellaneous manufacturing was outweighed by declines in clothing, textile, leather, rubber and tobacco factories. There was little general change in the important food and beverage group, which showed a decrease of only 0.2 p.c.

On the whole, employment in construction fell by 3.5 p.c. between 1959 and 1960, bringing the annual index to 125.7, its lowest position since 1956. There was a rather smaller reduction in mining, which was affected by a further weakening in demand for coal and base metals, including uranium. On the other hand, improvement was indicated in non-metal mining.

Relatively, the largest gain over 1959 in employment in the broad industrial divisions in 1960 was recorded in forestry (6.5 p.c.). That industry was also somewhat more active than in 1958 but was quieter than in any earlier year since 1940.

Employment in transportation, storage and communication continued to fall in 1960, when the index was lower by 2.8 p.c. than in 1959. Railroad staffs declined by 6.4 p.c. but there was a substantial rise in those engaged in air transport. For the second successive year, establishments in the communications industries reported smaller working forces. Public utility operation showed a slight reduction, the index at 137.8 being 0.9 points lower in 1960. The movement continued favourable in trade, finance, insurance and real estate, and in the service industries surveyed. In the latter two broad industrial divisions, employment has risen uninterruptedly over a period of many years; also, a minor decline in the index in trade in 1958 from 1957 was the only reversal of the steadily upward movement that has been recorded therein since 1943.

6.—Annual Average Index Numbers of Employment by Industrial Group 1951-60, and Monthly Indexes 1959 and 1960

NOTE.—These indexes are calculated as at the last day of each month, on the base 1949=100.

Year	Forestry (chiefly logging)	Mining	Manufacturing	Construction	Transportation, Storage and Communication	Public Utility Operation	Trade	Finance, Insurance and Real Estate	Service[1]	Industrial Composite

[1] Consists mainly of hotels, restaurants, laundries, dry-cleaning establishments and business and recreational services.

[2] The proportion of employees reported in the industries to the total reported by all employers making returns in Canada (12-month average).

7.—Annual Average Index Numbers of Employment, by Industrial Division and Group, 1955-60

NOTE.—These indexes are calculated as at the last day of each month, on the base 1949=100.

Industry	1955	1956	1957	1958	1959	1960
Forestry (chiefly logging)	**102.9**	**113.2**	**99.3**	**75.9**	**78.9**	**84.0**
Mining	**113.7**	**122.7**	**127.2**	**123.5**	**123.4**	**120.1**

[1] Includes New Westminster from 1956. [2] The proportion of employees reported in metropolitan areas to the total reported by all employers making returns in Canada (12-month average).

Average Weekly Wages and Salaries.—Although per capita weekly earnings of workers in the industries and establishments surveyed monthly rose in 1960, the general gain of 3.2 p.c. over 1959 was below the average of the increases successively recorded in the postwar years. At $75.83, the latest figure was the highest on record, bringing the index (1949 = 100) to 176.5; the 1946 index had been 75.6 and the 1939 index, 54.6.

Higher wage rates in many industries and establishments were a factor in the upward movement in 1960, but substantial declines from 1959 and immediately preceding years in the number of workers involved in industrial disputes and in the resultant loss in working days also contributed.

All industry divisions and many of their components shared in the upward movement in weekly wages and salaries in 1960. In most cases, the percentage changes in the broad groups did not greatly differ from that shown in the industrial composite figure. The increases over 1959 in manufacturing and finance, insurance and real estate were fractionally smaller in percentage terms, while those in forestry, construction and the service industries surveyed were somewhat larger.

10.—Annual Index Numbers of Employment and Payrolls, together with Average Weekly Wages and Salaries, by Industry, Province and Urban Area, 1958-60

[1] Mainly hotels, restaurants, laundries, dry-cleaning establishments and business and recreational services.

Subsection 3.—Hours and Hourly Earnings, 1960

Since the end of 1944, the monthly survey of employment and payrolls has also obtained, for wage-earners, statistics of hours worked and paid for during periods of absence with corresponding totals of gross wages paid to the wage-earners for whom records of hours are maintained. These are mainly hourly rated or production workers; the necessary information on hours is frequently not kept by employers for ancillary workers or, in many establishments, for any wage-earners. Salaried employees are excluded by definition from this series. In a number of industries, precise records of hours worked are lacking, with the result that data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.

The questionnaire used in the monthly survey calls for entry of the gross wage payments in the reported pay periods, before deductions for income tax, unemployment insurance, etc. They include such items as payments for premium overtime work, shift differentials, production, incentive and cost-of-living bonuses where paid, as well as straight-time wages, including the earnings of wage-earners employed for only part of the pay periods covered by the monthly surveys.

The general movement of average hourly earnings and weekly wages has been upward throughout the postwar years while the work week has been shortened in most industries. An exception to the latter is the highway, bridge and street construction group in which average hours have risen since 1945 when labour and materials were in short supply. The changes from 1945 to 1960 are summarized in Table **12**.

Average earnings in manufacturing have shown notable advances in the period, particularly in the non-durable component. This is due in part to changes in the distribution of workers within that group, there having been unusually large increases in employment in certain relatively high-pay components such as oil refining, pulp and paper and printing and publishing, with greater stability or sometimes declines in several of the industries in which earnings tend to be below the divisional level.

12.—Changes in Average Hours and Earnings in Specified Industries, 1945 to 1960

Industry	Average Hours Worked			Average Hourly Earnings			Average Weekly Earnings		
	1945	1960	Change	1945	1960	Change	1945	1960	Change
	No.	No.	p.c.	$	$	p.c.	$	$	p.c.
Mining	43.9	41.7	− 5.0	0.85	2.09	145.9	37.40	87.26	133.3
Manufacturing	44.1	40.4	− 8.4	0.69	1.78	158.0	30.47	71.96	136.2
Durable goods	44.5	40.7	− 8.5	0.76	1.94	155.3	34.04	78.70	131.2
Non-durable goods	43.7	40.1	− 8.2	0.61	1.64	168.9	26.57	65.68	147.2
Construction—									
Building and structures	40.2	40.1	− 0.2	0.81	2.12	161.7	32.60	84.85	160.3
Highways, bridges and streets	36.7	41.0	11.7	0.63	1.63	158.7	23.19	66.89	188.4
Service	43.8	39.1	−10.7	0.43	1.04	141.9	18.92	40.58	114.5

Average hourly earnings in manufacturing generally rose in 1960 over 1959 by six cents to $1.78. The amount of the increase was the same as in 1959 over 1958 and the percentage gain, at 3.5, differed little. Both advances, however, were somewhat smaller than in most earlier years of the record. With a moderate decline in the length of the average work week, average weekly wages showed a rise of only 2.6 p.c., also a below-average gain. The hours reported averaged 40.4 per week compared with 40.7 a year earlier and 40.2 in 1958.

Average earnings in plants producing durable goods rose in 1960 by seven cents per hour, or 3.7 p.c. over 1959, and weekly wages by $2.04, or 2.7 p.c.; slight loss in working hours was responsible for the lower percentage change recorded in the latter. The work week averaged 40.7 hours compared with 41.0 in 1959. The 1960 figure, however, was a little above the 1958 level, when major industrial disputes had been a factor of some weight.

In the non-durable goods component, the 1960 increases over 1959 amounted to six cents, or 3.8 p.c., in hourly earnings and to $1.78, or 2.8 p.c., in weekly wages; the smaller rise in weekly wages reflected a slight decline in the weekly average of hours reported.

The percentage gain in the hourly average exceeded that in either 1958 or 1959 but was somewhat lower than in most other years for which data are available. All major groups within the light manufacturing division reported increases in average hourly earnings in 1960 over 1959. Higher wage rates were an important factor in the upward movement, notably in breweries, distilleries, tobacco plants, cotton and synthetic textiles, pulp and paper mills, printing and publishing, petroleum refineries and chemical plants.

The more important non-manufacturing industries for which information is obtained in this series also reported higher averages of hourly earnings in 1960. The figure for mining rose by 2.5 p.c.; with a minor gain in the hours per week, average weekly wages advanced by 2.9 p.c. In construction, the hourly earnings were higher by 5.4 p.c., a somewhat larger gain than in 1958 or 1959; weekly wages advanced by 5.7 p.c., the work week having been slightly longer in 1960 than in the preceding year. Wage rates moved up in a number of trades, notably for carpenters and electrical workers. Strikes were a factor of some importance in the construction industry, lowering employment levels during 1960. Pay rate revisions contributed to higher averages of hourly earnings in the service industries for which data on man-hours are available.

---

[1] The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes all other manufacturing industries.

Subsection 4.—Hours and Earnings in Manufacturing Industries*

Information obtained in an annual survey of earnings and hours in manufacturing relating to the last week of October supplements the monthly data dealt with in the preceding Subsections. Separate figures of hours and earnings of men and women wage-earners and salaried employees are obtained in each survey and additional information is collected periodically. Distributions of wage-earners in a given range of hours were compiled each year from 1946 to 1949 and every third year thereafter to 1961 (1958 statistics were given in the 1959 Year Book, p. 744). Percentage distributions of wage-earners and salaried employees by amounts earned in the survey week were obtained triennially from 1950 to 1959; the latest figures appear in Table **18**. Hours and earnings of clerical and related workers, given in Table **16** for 1959, were segregated from those for managerial, professional, supervisory and other salaried employees in 1951, 1954, 1957 and 1959.

The annual survey, like the monthly survey, is limited to establishments usually employing 15 or more persons and covers approximately 90 p.c. of all employees reported to the annual Census of Manufactures. Establishments are asked to report for all casual, part-time and full-time employees on their staffs in the survey week, excluding proprietors, firm members, pensioners, homeworkers, employees absent without pay throughout the week, and staffs in manufacturers' separately organized sales offices. Gross earnings for the week are required, including regularly paid bonuses, overtime pay and amounts paid for absences in the survey week. The reported hours comprise part-time, full-time and overtime hours worked and hours of paid absence. The general averages obtained are usually very similar to those derived from the corresponding monthly survey.

The annual survey reflects a continued upward movement in wages and salaries throughout the postwar period. Table **14** provides year-to-year comparisons of average earnings from 1950. In the decade, men's weekly wages rose by 55.5 p.c. and their salaries by 62.6 p.c. In the same period, women's weekly wages advanced by 50.0 p.c. and their salaries by 62.1 p.c. Because the general trend in working hours has been downward as a result of reductions in the standard work week and other factors, the increases in average hourly earnings of wage-earners have been proportionately greater than in weekly wages, the gains in 1959 over 1950 amounting to 64.9 p.c. for men and 54.1 p.c. for women.

Variations in the magnitude of the changes shown in the general and group averages and in the year-to-year comparisons are obviously related to varying economic and other conditions affecting the component industries in the survey periods, as well as to the industrial and, in some cases, the area distributions of the reported employees. Tables **15** and **16** show the 1959 averages of hours and earnings for wage-earners and salaried employees, respectively, for the provinces, the six largest metropolitan areas, the major industry groups and several important industries. It will be noted that women earn consistently lower average earnings than men in the same area or industry unit. This results not only from pay differentials and occupational differences, but also from such factors as a frequently shorter work week for women, a greater incidence of part-time work and absenteeism among them, their higher proportions of younger and less experienced workers, and their industrial distributions.

Salaried employees comprise increasing proportions of manufacturing staffs as a whole. Table **17** shows that the proportion of salaried employees has risen from 18.5 p.c. in 1950 to 23.6 p.c. in 1959. This trend is associated with developments in planning, administration and record-keeping which have increased requirements for professional and clerical personnel, and with changes in manufacturing processes which have frequently reduced employment for production workers per unit produced. Changes in industrial distributions of the employees reported also contribute to variations in the ratio of salaried personnel to wage-earners, which in any one period may be further influenced by seasonal, market and other conditions affecting levels of production. These usually cause sharper fluctuations in numbers of wage-earners than of salaried employees.

---

* More detailed information is given in DBS annual report *Earnings and Hours of Work in Manufacturing* (Catalogue No. 72-204).

Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and region or city and on standard weekly hours of labour are compiled by the federal Department of Labour and published in the annual report *Wage Rates, Salaries and Hours of Labour*. The statistics published are based on an annual survey covering some 23,000 establishments in most industries and apply to the last normal pay period preceding Oct. 1.

Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers in a given occupation are shown separately but are combined in the calculation of index numbers. Predominant ranges of rates for each occupation used are also given. Overtime pay is excluded.

The industry index numbers measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. More detailed information on concepts and methods of developing these statistics is given in the annual report.

19.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1950-59

(1949=100)

Note.—Indexes back to 1901 may be obtained from the Department of Labour publication *Wage Rates, Salaries and Hours of Labour 1959.*

Table **23** gives summary data on working conditions of plant and office employees in manufacturing industries for the years 1956 to 1960. The percentages in this table denote the proportions which employees—plant or office—of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items.

It will be noted that for the years 1956, 1957 and 1958 the number of establishments shown as having plant employees is identical with the number having office employees, while for 1959 and 1960 these numbers differ. The explanation is that in 1959 separate counts of establishments having plant workers and establishments having office employees were obtained, while in previous years counts of establishments were obtained without distinguishing between those with both plant and office employees and those with either one or the other only. Year-to-year differences in coverage for 1956, 1957 and 1958 are attributed to differences in rates of response or to the fact that all the establishments included in the survey did not necessarily operate in all years.

23.—Summary of Selected Working Conditions of Plant and Office Employees in Manufacturing Industries, 1956-60

Item		1956	1957	1958	1959	1960
		COVERAGE				
Plant Employees—						
Reporting establishments	No.	6,166	6,105	6,240	7,902	8,028

---

[1] Distinction between vacation policies providing for increasing vacation periods with increasing service and vacation policies providing for vacations of one stated period regardless of length of service was made for the first time in 1960; thus, in comparing 1960 figures with those for previous years, the percentages of employees granted vacations under both policies should be added.

[2] In 1960, respondents employing 2 p.c. of the total plant employees covered by the survey reported that they provided for paid statutory holidays for their employees but did not give the number of such holidays.

[3] In 1960, respondents employing 1 p.c. of the total office employees in manufacturing covered by the survey reported that they provided for paid statutory holidays for their employees but did not give the number of such holidays.

Wages of Farm Labour.—The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland. The rates presented in Table 24 are average wages paid to all farm help regardless of age and skill. Because the rates reported may cover a wide range of skills, of types of work and of ages of hired workers, the value of the resulting data is considered to be as an indicator of trends rather than as a measure of absolute wage levels. No attempt has been made to have the wage rates reflect such perquisites as separate housing accommodation, fuel, electricity and food which, under some conditions of hiring, are supplied by employers to their hired farm help.

24.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1956-60

NOTE.—Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

Section 5.—Unemployment Insurance*

During the depression of the 1930's the need for a nationwide scheme of unemployment insurance became recognized. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, by consent of the provinces, an amendment to the British North America Act was obtained empowering the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance scheme and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations carried on under the Act. The Act, which came into effect on July 1, 1941, was later amended on several occasions and was replaced by a new Unemployment Insurance Act passed on July 1, 1955 and effective Oct. 2, 1955.

Legislation provides for compulsory coverage of some four-fifths of all non-agricultural employees under an insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefits to unemployed insured persons. The Act is administered by a Commission of three persons appointed by the Governor in Council, of whom one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service, except the following: employment in specified industries or occupations such as agriculture, horticulture and forestry (effective Jan. 1, 1956, coverage was also extended to certain employments in these three industries); the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; private domestic service; private-duty nursing; teaching; certain director–officers of corporations; workers on other than an hourly, daily or piece rate earning more than $5,460 a year effective Sept. 27, 1959, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a milage rate) are insured regardless of amount of earnings, together with all employees who receive $5,460 or less at weekly, monthly, yearly or commission rates.

Under the Canadian Unemployment Insurance Act, benefit payments are made out of a Fund derived from moneys provided by Parliament and from contributions by insured employed persons and their employers. The amount of the employee contribution is determined by his weekly earnings and, since 1950, an equal contribution is required from the employer. Federal Government participation amounts to one-fifth of the aggregate employer–employee contribution. In addition, administrative costs are assumed by the Federal Government. Contributions became payable on July 1, 1941, and by Mar. 31, 1960 a total of $2,837,000,000 had been provided from these three sources; accruals from investment over the period brought the net revenue to $3,103,000,000. Investment transactions, as authorized by an Investment Committee, are carried out by the Bank of Canada.

Benefits became payable on Jan. 27, 1942 and by Mar. 31, 1960 a total of $2,737,000,000 had been paid, the balance in the fund at that date being $365,900,000.

---

* Prepared by the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics; statistics of unemployment insurance are compiled and published by the DBS from material supplied by the Unemployment Insurance Commission.

Statistics of the Operation of the Act.—In order to assess the impact of changing economic conditions on the insurance scheme, provision is made for the collection of current operational data, such as claims filed and processed in a month, and weeks and amount of benefit paid. These data, as published monthly in the *Statistical Report on the Operation of the Unemployment Insurance Act* (Catalogue No. 73-001), are used for administrative purposes as well as public information regarding financial and other aspects of the scheme. The number of initial and renewal claims filed during a month provides an approximation of separations from insured employment during the period while the count of claimants reporting at the month-end is a valuable indicator of the extent to which claimants maintain contact with local offices of the Commission. During the year 1960 there were 2,700,000 claims filed at local offices. On the average, slightly over 518,000 persons were on claim at the end of each month and total payments amounted to $481,836,000. These figures compare with 2,428,000 claims, an average of 454,000 persons on claim at the end of each month, and benefit payments amounting to $406,097,000 during 1959. The average weekly payment in 1960, at $22.32 was slightly higher than the 1959 figure of $21.18. The higher average for 1960 resulted in part from the adoption of two new benefit classes as of September 1959, thus increasing the maximum weekly rate from $23 to $27 (from $30 to $36 for those with a dependant).

[1] Average of month-end data.

In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are compiled regarding persons employed in insurable employment and benefit periods established and terminated. These data are published in the annual report on *Benefit Periods Established and Terminated under the Unemployment Insurance Act* (Catalogue No. 73-201). The data on the insured population in Table 26 were obtained from returns from the renewal of insurance books and contribution cards at June 1, 1958 and June 1, 1959. Included are persons contributing in insurable employment on those dates and persons on claim. The number insured at June 1, 1959 increased by 17,810 from the previous book renewal to 4,072,900. Unemployment insurance was extended to fishermen on Apr. 1, 1957. This coverage change is interesting since the majority of commercial fishermen in Canada are not wage-earners but sharesmen or lone workers. It was decided to treat as the "employer" the person who first acquires the catch from the person who does the actual fishing. In some instances this is his actual employer, in others it is the buyer of the catch, and in still others it is the person or organization that markets the catch for the fisherman. Fishermen were not considered for benefit until the 1957-58 seasonal benefit period.

26.—Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1958 and 1959

NOTE.—Based on a 10-p.c. sample of contributors and claimants at June 1, 1958 and 1959.

The following statement shows the current weekly rates of contribution and benefit that became effective Sept. 27, 1959, and those in effect from Oct. 2, 1955 until that date. The weekly contribution is based on actual earnings in the week irrespective of the number of days in which the earnings are obtained; the employer pays a like amount. The benefit rates are calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. A claimant must have, to qualify for regular benefit, at least 30 weekly contributions in the last 104 weeks prior to claim; eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period; and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

[1] A half stamp, except for fishermen.

The duration of regular benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks (36 weeks prior to Sept. 27, 1959). Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Seasonal benefit is payable in the period Dec. 1 to mid-May to certain claimants whose benefits have been exhausted or who have insufficient contributions to qualify for regular benefit. Prior to 1958 the period was Jan. 1 to mid-April. A temporary extension of six weeks to the seasonal benefit period was made in 1958.

Table 27 distributes by province persons establishing regular benefit periods, regular benefit periods terminated, average weeks paid and average dollar benefit paid on these terminations. A claimant establishes a *regular benefit period* when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit authorized, the weekly rate authorized and total entitlement are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates either when he has exhausted the amount authorized or when 12 months have elapsed since he established, whichever comes first. The number establishing benefit periods in 1959 decreased to 985,148 from 1,091,484 in 1958. The duration of paid benefit in 1959 averaged 13.5 weeks, compared with 14.3 weeks in 1958. Ordinary benefit paid averaged $298.90 on terminations in 1959, down from $313.87 on terminations in 1958.

Employment Service.—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act. The public employment offices, which had functioned under a joint federal–provincial arrangement for more than two decades, were taken over by the Commission on Aug. 1, 1941, and additional offices were established in all provinces except Quebec. The Commission established its own offices in Quebec and the provincial government thereupon reduced the number of its offices.

Section 6.—Vocational Training*

The federal Department of Labour, under the authorization of the Vocational Training Co-ordination Act 1942, co-operates with the provinces in promoting and developing vocational training in Canada by sharing with the provincial governments the costs of establishing and operating various types of schools and training programs designed to fit trainees for employment.

---

* More detailed information is given in the annual report *Canadian Vocational Training Branch*, published as a supplement to the annual report of the Department of Labour.

The federal–provincial program under which all classes and training projects are operated is known as 'Canadian Vocational Training'. In conducting this program, the Minister of Labour receives advice and co-operation from the Vocational Training Advisory Council which consists of representatives of provincial governments, employers, organized labour and other bodies concerned with vocational training in Canada. Problems regarding apprenticeship, including federal participation therein, are referred to the Apprenticeship Training Advisory Committee which reports to the Minister through the Council.

The established procedure is to have all training programs operated by or under the supervision of the appropriate provincial authority and to reimburse the provinces for provincial government expenditures in connection with such projects. Where classes or training programs are operated for Federal Government departments, the Armed Forces or other federal agencies, the provinces are reimbursed for the full costs; otherwise they are reimbursed for one-half of such expenditures subject to the limitation of funds voted for such purpose by Parliament.

There are three federal–provincial agreements governing the nature and extent of the sharable expenditures for different types of training: the Vocational and Technical Training Agreement No. 2, the Apprenticeship Training Agreement, and the Special Vocational Training Projects Agreement.

Vocational and Technical Training Agreement.—This Agreement which provides for the expenditure, over the five-year period that began Apr. 1, 1957, of $40,000,000 of Federal Government assistance to the provinces in the building, equipping and operating of vocational and technical schools, institutes and training centres, was signed by all provinces except Quebec. Of this amount, $25,000,000 is provided exclusively for assistance on capital projects, with preference being given to trade and technical institutes, although approved vocational high schools are also eligible to share. This capital appropriation is allotted to the provinces on the basis of population in the 15-19 age group. The remaining $15,000,000 is distributed by way of annual allotments to the provinces for sharing in operating costs of similar institutes and schools or, if desired, a province may claim as much as half of its annual allotment against capital costs of such institutions. The Agreement provides for annual allotments totalling $2,500,000 in each of the first two years of operation, $3,000,000 in the third year, and $3,500,000 in both the fourth and the fifth years. The annual allotments consist of initial allotments of $30,000 to each province and $20,000 to each of the Yukon and Northwest Territories, the remainder being allotted on the basis of population in the 15-19 age group. Federal expenditure under this Agreement for the year ended Mar. 31, 1960 was $5,139,481.

Apprenticeship Training.—Apprenticeship agreements covering a ten-year period commencing Apr. 1, 1944 were signed by all provinces except Quebec and Prince Edward Island. Newfoundland signed an agreement in 1950 for the remainder of the 1944-54 period. These agreements were renewed for a further ten-year period expiring on Mar. 31, 1964. They provide for sharing, on a 50-50 basis, in provincial government expenditures on the training of indentured apprentices who are registered with the provincial Departments of Labour under the provisions of the apprenticeship Act of each province. Training is provided on the job and in specially organized classes which may be conducted on a full-time basis during the day or as part-time day or evening classes. As of Mar. 31, 1960, a total of 19,962 apprentices had been registered. Federal Government expenditures for this purpose for the year ended Mar. 31, 1960, were as follows:—

Province	*Payment*
	$
Newfoundland	64,241
Nova Scotia	88,896
New Brunswick	94,254
Ontario	498,687
Manitoba	88,491
Saskatchewan	142,642
Alberta	471,097
British Columbia	341,925
Northwest Territories	264
TOTAL	1,790,497

Special Vocational Training Projects.—Agreements have been in operation since 1939 which provide for sharing with the provinces the costs of various types of training projects, other than those regularly conducted in schools assisted under the provisions of the Vocational and Technical Training Agreement No. 2 and programs of Apprenticeship Training. These Agreements are now consolidated under the Special Vocational Training Projects Agreement, effective from Apr. 1, 1959 until Mar. 31, 1964, except that the provision for sharing the costs of financial assistance to university students and nurses-in-training is subject to renewal on a year-to-year basis. The conditions governing financial assistance to the various types of projects are set forth in schedules attached to and forming part of the Agreement. These schedules cover special training classes for members of the Armed Forces and training programs arranged by the provinces for employees of Federal Government departments, the costs of which are borne entirely by the federal treasury. In addition, the costs of the following types of classes are shared equally by the federal and provincial governments: training for unemployed persons who require such training to fit them for employment; rehabilitation training for disabled persons; short-term classes for employment in primary industries; training programs for supervisors in industrial establishments; and preparation, printing and revision of vocational correspondence courses made available by the provinces to students anywhere in Canada on the same terms as to students in the province where the course has been prepared. In the year ended Mar. 31, 1960, federal expenditures of $1,201,491 were made toward programs now covered by the Special Vocational Training Projects Agreement.

Section 7.—Industrial Accidents and Workmen's Compensation

Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, and from press reports.

31.—Fatal Industrial Accidents, by Industry, 1956-59

Industry	Numbers				Percentages of Total			
	1956	1957	1958	1959	1956	1957	1958	1959
Agriculture	106	92	97	101	7.3	6.6	7.6	7.6
Logging	197	141	129	143	13.5	10.2	10.2	10.8
Fishing and trapping	18	23	38	72	1.2	1.7	3.0	5.4
Mining, non-ferrous smelting and quarrying	250	185	231	175	17.0	13.3	18.2	13.2
Manufacturing	200	209	166	195	13.7	15.1	13.1	14.7
Construction	312	340	281	297	21.4	24.5	22.1	22.4
Electricity, gas and water production and supply	30	42	31	33	2.0	3.0	2.4	2.5

Trade	56	66	40	50	3.8	4.8	3.2	3.8
Finance	1	2	4	2	0.1	0.1	0.3	0.2
Service	64	80	89	76	4.4	5.8	7.0	5.7
Totals	**1,462**	**1,387**	**1,269**	**1,326**	**100.0**	**100.0**	**100.0**	**100.0**

Causes of Industrial Fatalities.—During 1959, of the 1,326 fatal accidents to industrial workers, 372 were the result of the victims being struck by objects—60 by falling trees or limbs, 47 by automobiles or trucks, 37 by objects falling or flying in mines and quarries, 33 by landslides or cave-ins, 32 by trains or other railway vehicles and 30 by materials falling from stockpiles and loads. Collisions, derailments, wrecks, etc., were responsible for 341 fatalities—automobiles and trucks were involved in 153 of these fatalities, tractors and loadmobiles in 66, watercraft in 61, and aircraft in 38. Falls and slips were responsible for 218 industrial deaths, of which 210 were falls to different levels, including 65 deaths caused by falls into rivers, lakes, seas or harbours, 38 by falls from scaffolds or stagings and 34 by falls from buildings, roofs or towers. The classification "caught in, on, or between objects, vehicles, etc." caused 109 fatalities, 26 of which were caused by machinery, 22 by tractors and loadmobiles and 21 by hoisting or conveying apparatus. Conflagrations, explosives and exposure to hot substances caused 89 fatalities and 83 were caused by exposure to dust, poisonous gases and poisonous substances. Contact with electric current was responsible for 64 deaths and 17 were the result of over-exertion, strain, etc.

Subsection 2.—Workmen's Compensation*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or for disablement caused by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation, each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act.

In all provinces, free medical aid is given to workmen during disability. Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus, and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

Scope of the Workmen's Compensation Acts.—The Acts vary in scope but in general they cover construction, mining, manufacturing, lumbering, transportation and communication and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.—Each Act provides for a waiting period, i.e., a minimum period of time during which a workman must be disabled from earning full wages in order to qualify for compensation. In Manitoba, Saskatchewan and Alberta the waiting period is one day. Compensation is not payable when a workman is off work only for the day on which the accident occurs but if he is disabled for a longer time compensation begins from the day following the accident. The waiting period in British Columbia is three days, in Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick four days, and in Quebec and Ontario five days. Where a disability continues beyond the waiting period, compensation is payable from the date of the accident. The waiting period does not restrict the right of the workman to medical aid which, under all the Acts, is given from the date of the accident.

Burial expenses are paid to the amount of $400 in Quebec, $300 in Prince Edward Island, New Brunswick and Ontario, $250 in Nova Scotia, Saskatchewan and British Columbia, and $200 in Newfoundland, Manitoba and Alberta. In all provinces an additional sum is allowed for transporting the workman's body.

---

* More detailed information is given in the Department of Labour publication *Workmen's Compensation in Canada, A Comparison of Provincial Laws.*

A widow or invalid widower or a foster mother with children under the age limit receives a monthly payment of $100 in Saskatchewan, $90 in British Columbia, $75 in Quebec, Ontario and Manitoba, $60 in Newfoundland, Nova Scotia, New Brunswick and Alberta, and $50 in Prince Edward Island. In addition, a lump sum of $300 is paid in Quebec, Ontario, Manitoba and Saskatchewan, $250 in British Columbia, $200 in Prince Edward Island, $150 in Nova Scotia and Alberta, and $100 in Newfoundland and New Brunswick.

For each child in the care of a parent or foster mother receiving compensation a monthly payment of $35 is made in Manitoba, Saskatchewan and British Columbia, $30 in Alberta, $25 in Quebec and Ontario, $22.50 in Nova Scotia, and $20 in Newfoundland, Prince Edward Island and New Brunswick.

For each orphan child a monthly payment of $50 is made in Saskatchewan, $45 in Manitoba, $40 in New Brunswick and British Columbia, $35 in Quebec and Ontario, and $30 in Newfoundland, Prince Edward Island, Nova Scotia and Alberta. In Alberta, a further amount, not exceeding $10 a month, may be given at the discretion of the Board, and the maximum allowance payable to a family of orphans is $120 in Prince Edward Island. In Saskatchewan, the Board may in its discretion make a lump sum payment, not exceeding $50, to an orphan child.

Invalids excepted, payments to children are not continued beyond the age of 16 years in seven of the provinces but the Board has discretion to pay compensation to the age of 18 (19 in Saskatchewan) if it is considered desirable for a child to continue his education. In Quebec, the age limit is 18 years, and in New Brunswick and British Columbia compensation is paid to the age of 18 if a child is attending school regularly.

In Newfoundland, Prince Edward Island and Alberta, payments are made to invalid children only for the length of time the Board considers that the workman would have contributed to their support. In the other provinces payments are continued until recovery.

All the Acts provide that where the only dependants are persons other than consort or children compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly amount to be paid to all such dependants is limited to $100 in Ontario, $90 in British Columbia, $85 in Alberta, and $60 in Prince Edward Island and Nova Scotia. In British Columbia, if a workman leaves dependent parents as well as a widow or orphans, the maximum payable to a parent or parents is $90 a month. Manitoba provides for a maximum monthly pension of $75 to a wholly dependent mother and for a maximum of $60 for other dependants. Compensation to dependants, other than consort or children, is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Nova Scotia, Alberta and British Columbia, each Act places a maximum on the total amount of benefits payable to dependants if the workman dies. A maximum is placed on the amounts that may be paid to the widow and children and to orphan children in Prince Edward Island—$170 to the former and $120 to the latter. The maximum to all dependants is 75 p.c. of the workman's earnings in Newfoundland, New Brunswick, Quebec and Manitoba, and in Ontario and Saskatchewan the average earnings of the workman are the maximum amount payable.

Irrespective of the workman's earnings, however, compensation may not fall below certain minimum monthly amounts. The minimum payable to a consort and one child in Quebec is $100 a month, to a consort and two children $125, and to a consort and more than two children $150; in Manitoba, the minimum is $110 if there is a consort and one child and $145 if there is more than one child; in Saskatchewan, the minimum is $135 a month to a consort and one child and $170 to a consort and two children plus $20 a month for each additional child. In Newfoundland, a widow must receive at least $60 a month with a further payment of $20 a month for each child under 16 unless the total exceeds $130. In Ontario, the minimum payable to a widow is $75 a month with a further payment of $25 for each child up to but not exceeding $150 a month.

Compensation for total disablement in all provinces is a periodical payment for the duration of the disability equal to 75 p.c. of average earnings. Except in New Brunswick, the Acts fix minimum sums to be paid for a permanent total disability. The minimum is $15 a week in Quebec, $20 in Prince Edward Island, $25 in Manitoba, Alberta and British Columbia, and $30 a week in Saskatchewan. In Newfoundland, the minimum is $65 a month and in Nova Scotia and Ontario $100 a month. If average earnings are less than the minimum amount allowed, the amount of the earnings is paid in all provinces except Nova Scotia and Saskatchewan. For partial disablement, compensation is either 75 p.c. of the difference in earnings before and after the accident or an amount determined by the Board on the basis of impairment of earning capacity estimated from the nature of the injury. In the latter case the workman is entitled to the same fraction of 75 p.c. of earnings as his impairment is of his full earning capacity. In all provinces, if the impairment of earning capacity is 10 p.c. or less (5 p.c. or less in Alberta), a lump sum may be given.

The average earnings on which compensation is based are limited to $6,000 a year in Saskatchewan, $5,000 in Quebec, Ontario and British Columbia, $4,500 in Manitoba, $4,000 in New Brunswick and Alberta, $3,600 in Nova Scotia, and $3,000 in Newfoundland and Prince Edward Island. If the workman's earnings at the time of accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid to a workman under 21 years of age may be raised later if it appears that his earning power would have increased had the injury not occurred.

Table **32** gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by the Workmen's Compensation Board in the years 1958 and 1959.

32.—Industrial Accidents Reported and Compensation Paid by Workmen's Compensation Boards, 1958 and 1959

---

[1] Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the different provinces. [2] Includes, except where otherwise noted, payments to compensate loss of earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities. [3] Excludes payments for hospitalization and rehabilitation. [4] Excludes payments for hospitalization. [5] Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts. [6] Excludes payments for hospitalization and rehabilitation and funeral and related expenses.

Section 8.—Organized Labour in Canada*

Close to 1,460,000 Canadian workers belonged to labour unions in 1960. Affiliates of two central bodies—the Canadian Labour Congress, over a million strong since its formation in 1956, and the Canadian and Catholic Confederation of Labour—continued to account between them for well over 80 p.c. of organized labour, while much of the remainder of union membership was represented by organizations active on a regional, national or international level, but independent of a central labour congress.

At the beginning of 1960, unions belonging to the Canadian Labour Congress had a total membership of 1,123,000, while the Canadian and Catholic Confederation of Labour had approximately 102,000 members. Later in the year, the name of the Canadian and Catholic Confederation of Labour was changed to the Confederation of National Trade Unions.

More than two-thirds of the organized labour force in Canada belong to unions that operate on the international level. In January 1960, 90 of the 108 international unions active in Canada were affiliates of the CLC, and 85 of those were also within the American Federation of Labor and Congress of Industrial Organizations. Eleven of the remaining 18 international unions had no congress link in Canada, but were affiliated with the AFL-CIO. There were 48 national and regional unions in Canada at the beginning of 1960, 17 of them affiliated with the CLC and 13 with the CCCL.

International, national and regional unions had more than 1,372,000 members within their ranks in 156 organizations ranging in size from 10 to 82,000 members. The United Steelworkers of America, with 82,000 members in Canada, continued to rank first, followed by the United Brotherhood of Carpenters and Joiners of America with 66,000 members and the International Union, United Automobile, Aircraft, and Agricultural Implement Workers of America with 61,000 members. The National Union of Public Employees, which in the previous year had moved ahead of the Canadian Brotherhood of Railway, Transport and General Workers as the largest national union in Canada, reported a further membership gain, bringing its total to nearly 45,000.

The grand total of 1,459,000 members reported by labour organizations in the 1960 survey was equal to approximately 3 p.c. of the estimated total number of non-agricultural paid workers in Canada.

---

* A special article on the History of the Labour Movement in Canada prepared by Dr. Eugene Forsey, Director of Research, Canadian Labour Congress, appears in the 1957-58 Year Book, pp. 795-806.

33.—Union Membership in Canada, 1930-60

Year	Members	Year	Members	Year	Members
	'000		'000		'000
1930	322	1940	362	1951[1]	1,029
1931	311	1941	462	1952	1,146

Section 9.—Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. Tables **36** and **37** cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Where the number of workers involved varied in the course of a stoppage, the peak figure is used in tabulating annual totals. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included in the number of workers involved.

Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. Where the number of workers involved varied during the period of a stoppage, an appropriate adjustment is made in the calculation as far as this is practicable. The duration in man-days of all work stoppages in a year is also shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada.

The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the econony.

Section 10.—Canada and the International Labour Organization

The Department of Labour is the officially designated liaison between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization and by the United Nations General Assembly in 1946, the Organization became a specialized agency of the United Nations although it retained its autonomy.

The ILO is an association of 97 Member States, financed by their governments and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs: (1) the Governing Body; (2) the International Labour Office; and (3) the International Labour Conference. Since World War II the ILO has extended its field of activities by the establishment of ten tripartite industrial committees to deal with problems of important world industries, by the holding of regional and special technical conferences, and by technical assistance to aid under-developed countries in such fields as co-operative merchandising, vocational training, productivity techniques and employment service organization.

The Governing Body consists of 40 members—20 government representatives, 10 employers' representatives and 10 workers' representatives. Of the government seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place and the other 10 government representatives are elected triennially by the Conference. The worker and employer members are elected by their groups every three years at the Conference. The Governing Body meets three times a year and has supervision over the work of the International Labour Office and the various Conferences and Committees, in addition to framing the budget and approving the agendas of the Conferences and meetings. Canada's representative on the Governing Body is the Deputy Minister of Labour for Canada.

The International Labour Office acts as the permanent secretariat of the ILO and as a world research and information centre and publishing house on all subjects concerned with working and living conditions. In the operational field it assists Member States by furnishing experts on manpower training and technical and other types of assistance. The ILO maintains branch offices in all parts of the world; the Canada Branch is located at 202 Queen Street, Ottawa.

The International Labour Conference is a world assembly for the consideration of labour and social problems. It meets annually and is attended by four delegates from each Member State (two representing the government, one representing the employers and one representing the workers) accompanied by technical advisers. The Conference formulates international standards concerning working and living conditions in the form of Conventions and Recommendations. A Convention, after adoption, must be considered by the competent authorities in each Member State with a view to possible ratification; however, each Member State decides whether or not to ratify any Convention, and only by ratification does it assume the obligation to bring its legislation in that field up to the standard set by the Convention. A Recommendation is less formal: it contains general principles for the guidance of governments in drafting legislation or in issuing administrative orders and is not subject to ratification by the Member States.

There have been 44 Sessions of the International Labour Conference, at which 115 Conventions and 114 Recommendations have been adopted, covering a wide range of subjects such as industrial relations, freedom of association, hours of work, weekly rest, holidays with pay, minimum wages, night work of women and young persons, industrial health and safety, workmen's compensation, conditions of work for seamen, dockers and fishermen, unemployment and health insurance, protection of migrant workers, equal remuneration, discrimination, forced labour, radiation protection, and many other aspects of industrial and social problems. By Jan. 1, 1961, ratifications of Conventions by Member States numbered 2,242.

Canada has ratified 19 ILO Conventions, of which 12 concern maritime and dock labour. In Canada the provincial legislatures are the competent legislative authorities with jurisdiction over the subjects covered by most of the ILO Conventions and Recommendations. The Department of Labour, as the official link with the International Labour Organization, is responsible for forwarding to the ILO annual reports on ratified Conventions as well as periodical reports on many other industrial and social matters. Canada is represented at most of the ILO annual and special meetings, and accounts of the discussions and the decisions are regularly published in the *Labour Gazette*. The Department also keeps the provincial governments and the major employer and worker organizations informed of ILO activities.

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by areas of rough, rocky forest terrain such as the region lying between New Brunswick and Quebec, and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. Unevenly distributed along a narrow southern strip of Canada's vast area is its relatively small population of 17,814,000 (estimate of June 1, 1960). To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

The extent of government control over the agencies of transportation is covered in Part I of this Chapter; Parts II to VI deal with the various types of transport facility.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflect to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in rates and charges resulting from monoply conditions in the industry and the safety of transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway transportation. Unlike the competition that existed between railways in early stages of their development, today's competition shows little indication of starting a trend toward consolidation and a return to semi-monopolistic conditions within the industry. Because so many shippers now provide their own transportation, it is evident that a large part of the present competition between common carriers has become a permanent feature of the transportation industry.

It is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, are now alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are therefore faced with the problem of piecemeal revision of their regulations—retaining those where railway monoply or near-monoply conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to maintaining a balance between the several competing modes of transport. Indicative of this trend is the amendment to the Transport Act passed in 1955, which extends the freedom of the railways to make contract rates with shippers known as 'agreed charges'.

On Nov. 2, 1936, the amalgamation of the Department of Railways and Canals and the Department of Marine, together with the Civil Aviation Branch of the Department of National Defence to form the new Department of Transport brought under one control railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

Road and highway development is mainly under provincial or municipal control or supervision. According to the judgment of the Judicial Committee of the Privy Council dated Feb. 22, 1954, jurisdiction over interprovincial and international highway transport rests with the Federal Government. Federal and provincial representatives conferred at Ottawa in April 1954 on means of implementing that decision and on June 26, 1954, the Motor Vehicle Transport Act was passed by the Federal Parliament giving to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed in seven provinces.

The Board of Transport Commissioners for Canada.—The Board of Transport Commissioners for Canada was created and initially named the Board of Railway Commissioners for Canada by the Railway Act 1903, and was given its present name by the Transport Act 1938. It was organized on Feb. 1, 1904, and succeeded to all the powers and duties of its predecessor, the Railway Committee of the Privy Council. It was also given additional powers and duties which have been greatly enlarged since that date. When organized, the membership of the Board consisted of a Chief Commissioner, a Deputy Chief Commissioner and one Commissioner. In 1908 an Assistant Chief Commissioner and two other Commissioners were added. The Board is a statutory court of record, so constituted by the Railway Act and recognized as such by other courts, but it also has extensive regulative and administrative powers.

The great majority of applications and complaints to the Board are disposed of without hearing in open court, but public hearings are held in various places throughout Canada as the Board sees fit, particularly to suit the convenience of the parties and avoid expense to them. Evidence at public hearings is given under oath and interested parties appear personally or by counsel or representatives. The finding or determination of the Board upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of Canada upon a question of law or a question of jurisdiction with leave of a Judge of that Court, or by the Governor in Council.* Two Commissioners are a quorum or 'panel' for the hearing of a case and it is not unusual for two panels to be sitting at the same time on different cases.

The Board has jurisdiction under more than a score of Acts of Parliament, including jurisdiction, under the Railway Act and the Transport Act, over transportation by railway and by inland water, and over communication by telephone and telegraph.

Under the Railway Act its jurisdiction is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation, freight and passenger rates, and uniformity of railway accounting. The Board also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada, the British Columbia Telephone Company, the Bonaventure and Gaspe Telephone Company and the Yellowknife Telephone Company, over tolls for express traffic, and tolls for the use of international bridges and tunnels.

The Board has jurisdiction to inquire into, hear and determine any application by any party interested who complains that any company or person has violated or failed to comply with the Railway Act or a Special Act or any order made thereunder, or who requests the Board to make any order or give any direction, leave, sanction or approval that, by law, it is authorized to make or give or with respect to any matter, act or thing that by the Railway Act or Special Act is prohibited, sanctioned or required to be done. It has power to make orders and regulations generally for carrying the Railway Act into effect and for exercising jurisdiction conferred on the Board by any other Act.

Regulation of railway freight and passenger rates is one of the Board's principal tasks. Except for certain statutory rates, it has power "to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require"; it may disallow any tariff that it considers to be unjust or unreasonable or contrary to any provision of the Railway Act; it may prescribe other tolls in lieu of the tolls disallowed, or require the railway company to substitute a tariff satisfactory to the Board. Since the end of World War II there has been a succession of applications for authority to make general freight rate increases and general telephone rate increases.

A review of transport regulation was undertaken by the Royal Commission on Transportation, under the chairmanship of the Hon. W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951. (See 1952-53 Year Book, p. 741.) Certain of its recommendations, including the following, were incorporated into the Railway Act by amendments made in 1951: the equalization of freight rates; the requirement that, when transcontinental competitive freight rates are published, the corresponding rates to intermediate points shall not be more than one-third greater than the former; the payment by the Government of Canada of the cost of maintaining the so-called 'bridge' lines of the transcontinental railway systems in Ontario (between Sudbury, Capreol and Cochrane, and between Port Arthur and Armstrong) up to the amount of $7,000,000 annually, the amounts so received by the railways to be applied to reductions in freight rates between Eastern and Western Canada over the trackage referred to; and the requirement of a uniform classification of accounts to be prescribed by the Board of Transport Commissioners for the Canadian Pacific Railway and the Canadian National Railways.

---

* The Board's judgments are reported in *Canadian Railway Cases* and *Canadian Railway and Transport Cases*, and its judgments, orders, rulings and regulations are published by the Queen's Printer, Ottawa, in what is known as *J.O.R. & R.*

Pursuant to the amendments, a uniform scale of milage class rates has been prescribed by the Board and equalization of commodity rates is being proceeded with. The Board has also prescribed a uniform classification and system of accounts for railways and has approved a new freight classification.

Under the Transport Act the Board entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence the Board must be satisfied that public convenience and necessity require such transport. The Board also has regulative powers over tolls for such transport.

'Agreed charges' between shippers and carriers, authorized by the Transport Act, were also reviewed by the Hon. W. F. A. Turgeon in 1955 and his recommendations were implemented in amendments to that Act in 1955. Under the amendments, an agreement for an agreed charge shall be executed in tariff form and a duplicate original shall be filed with the Board within seven days after the making of the agreement, and the agreed charge takes effect twenty days after the filing, without necessity of the Board's approval of the charge. The Board continues to have power to fix a charge for a shipper who is unjustly discriminated against by an agreed charge and it also has power to vary or cancel an agreed charge referred to it by the Minister of Transport or the Governor in Council for investigation.

During the year 1960, a total of 2,795 applications were submitted to the Board under the provisions of the Railway Act, the Transport Act, the Maritimes Freight Rates Act, and other legislation under the Board's jurisdiction; 3,315 Orders and 10 General Orders were issued.

The Board, shortly after the interim freight rate increase of 17 p.c. was authorized in November 1958, required the railways to specify, before Apr. 10, 1959, the amount of supplementary relief sought. But before that date, the Government announced that no further general increases would be allowed for a period of one year pending the findings of a Royal Commission to be established to inquire into the railway rate structure and other matters affecting railway transportation. The Royal Commission was appointed May 13, 1959 with the Hon. C. P. McTague named as chairman (later succeeded by Murdoch Alexander MacPherson), and conducted hearings across Canada, receiving submissions from the railways and all interested parties. Volume I of its report was submitted in March 1961; two more volumes will follow.

On July 8, 1959, Parliament passed the Freight Rates Reduction Act. Designed as a relief measure for railway shippers, the Act provided a fund of $20,000,000 to permit a reduction in class rates and commodity rates (other than competitive rates) for a period of one year. In compliance with the Act, the Board of Transport Commissioners ordered the substitution of an increase of 10 p.c. for the said permissive increase of 17 p.c. effective Aug. 1, 1959. A further reduction to 8 p.c. was ordered by the Board as of May 1960. Under an amendment to the Freight Rates Reduction Act dated July 28, 1960, the reduced rates remained in effect until Apr. 30, 1961, and the aggregate of all payments under the Act was increased to not exceed $35,000,000. At the end of April 1961, the railways filed tariffs voluntarily extending the reduction. A Bill was later introduced to extend the Freight Rates Reduction Act to Apr. 30, 1962.

The Air Transport Board.—The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950 and 1952. The Board has three members including the Chairman, and the staff is comprised of a Senior Adviser; a legal Branch; an Operations Branch which includes the Traffic Division, Operations Analyst, Special Traffic Adviser, International Relations Division, and the Licensing and Inspection Division; an Economic and Accounting Branch which includes the Economics Division, Audit Division and Financial Analyst;

and a Secretary's Branch which includes the Administrative Division. In addition, a small staff is located in Montreal to service the Senior Canadian Representative on the Council of the International Civil Aviation Organization.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidations, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders, relating to all air services or groups of air services; Board Orders relating to individual air services; and Rules and Circulars for general guidance and information. Financial and operating statistics are collected under authority of the Board's Regulations.

The Board continues to devote special attention to the uniform charter tariff and to its interpretation for the guidance of operators in the establishment of their rates and fares. Regional route operations are under current review by the Board by way of public hearings throughout Canada.

In the field of international aviation, the Board continues to take an active part in the work of the International Civil Aviation Organization, and to undertake bilateral negotiations with a number of countries for the exchange of traffic rights. Trans-Canada Air Lines and Canadian Pacific Air Lines Limited are Canada's major designated international scheduled carriers.

The Canadian Maritime Commission.—The Canadian Maritime Commission Act passed in 1947 (RSC 1952, c. 38) constitutes the Canadian Maritime Commission a body corporate exercising its powers as an agent of Her Majesty. The Commission is established as a separate department of the Government reporting to Parliament through the Minister of Transport. The Commission is charged by Sect. 6 of the Act with the following responsibility:—

> "The Commission shall consider and recommend to the Minister from time to time such policies and measures as it considers necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry commensurate with Canadian maritime needs."

For the discharge of this responsibility the Commission is authorized to examine into, ascertain and keep records of all phases of ship operation. In addition, the Commission is specifically directed by paragraph (b) of Sect. 8 to:—

> "administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament."

On May 12, 1961, the Minister of Transport announced in the House of Commons a national maritime policy designed to encourage the construction and operation of ships in Canada and, as well, provide assistance to Canadian fishermen. To this end a capital subsidy amounting to 35 p.c. of the cost will be paid by the Government toward the construction of self-propelled ships in Canadian shipyards, to be increased to 40 p.c. for work done between May 12, 1961 and Mar. 31, 1963. For steel fishing trawlers the assistance will be 50 p.c. of the cost in cases where the new trawler will replace an old vessel withdrawn from service. Capital grants toward the construction of small wooden fishing vessels are also to be increased.

Payment of the capital subsidy will be made under regulations of the Governor in Council. It is expected that around $6,000,000 will be expended in the first year of the operation of this new policy but this figure cannot be taken as a guide to future years since part of the subsidy will be applied toward the construction of large ships which require anywhere from a year to a year and one-half to complete.

Subsidy has been paid by the Government for the maintenance of essential steamship services since the latter part of the nineteenth century. Included in this program were subsidies for domestic services and, as well, mail and operating subventions for overseas services. At the outbreak of World War II all subventions except those for domestic services were suspended and since the end of the War subsidies for ocean-going ships have been paid on only two occasions. On one occasion the purpose was for the preservation of a water transportation link with Australia and New Zealand but this was discontinued in 1952 when the *Aorangi* was withdrawn from service for demolition; the other occasion was a special one-year subsidy for Canadian ocean-going ships generally during a period of depressed freight rates in 1950.

The National Energy Board.—The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. Up to the end of 1960, the work of the Board was confined mainly to the conducting of hearings in connection with the issuing of permits to export oil and gas and for that reason is covered in more detail in the Foreign Trade Chapter of this volume (see Index). However, toward the end of the year the Board devoted a considerable amount of time to studies associated with the development of the national oil policy.

PART II.—RAIL AND URBAN TRANSPORT*

Section 1.—Railways

Since Confederation the railways of Canada have been the principal utility for the movement of passengers and freight throughout, and beyond, the nation. The two great national systems, supplemented by a newly completed north-south line on the West Coast and a few regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes. Though highway and air competition is increasing, the railways still retain their primary position in the freight transport field. However, growing public preference for air travel on long trips and for the use of private automobiles over short distances has greatly affected railway passenger services. In an attempt to meet this competition, much streamlining at both the administrative and operational levels has been undertaken by the railways, designed primarily to improve efficiency and flexibility of service.

The two national railway companies control a wide variety of Canadian and international transport and communication services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. In addition, it operates a highway service fleet of coastal and ocean-going steamships, a national telegraph system connecting the principal points of Canada with other parts of the world, an extensive express service in Canada and abroad, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European points. Its chief competitor, the Canadian Pacific Railway Company, is a joint-stock corporation operating a transcontinental railway supported by a national telegraph system with connections throughout the world, a large fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels, a domestic north-south airline which is one of the world's great air-freight carriers, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Portugal, Spain and Italy, and a limited (one flight daily each way) transcontinental air service between Vancouver and Montreal. Also included in the company's operations are a world-wide express service and a domestic truck and bus network.

---

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division. Certain of the financial statistics were compiled in co-operation with the Department of Transport.

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over a 788.6-mile route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with a branch line from Chetwynd to Dawson Creek. The completion in 1958 of the northern extension of this line opened up to development the vast interior of the province and brought to an end the biggest railway construction job undertaken in North America for two decades. With the completion in May 1959 of the last link in the microwave system, the PGE became the first railway on the Continent to be operated entirely by means of radio communication.

The statistics of Subsections 1 to 3 of this Section cover the combined railway facilities of all companies operating in Canada, including intercity freight and passenger services of electric railway companies. Details relating to the Canadian National Railway System are dealt with separately in Subsection 4. A special article covering the consolidation and organization of the CNR appears in the 1955 Year Book at pp. 840-847.

Subsection 1.—Milage and Equipment

Construction was begun in 1835 on the first railway in Canada—the short link of 14.5 miles between Laprairie and St. Johns, Que.—but only 66 miles were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

Only a gradual increase has taken place in the milage of signal track line since the 1920's. Recently, however, the development of a number of large industrial projects in districts far removed from transport facilities has necessitated the building of branch lines. Those completed up to 1956 are listed in the 1957-58 Year Book, p. 815, and those completed in 1957 and 1958 in the 1959 Year Book, p. 775. During 1959 the eastern section of the Chibougamau branch line constructed by the CNR from St. Félicien to Cache Lake in Quebec, a distance of 133 miles, was officially placed in service; the western section of this line, from Beattyville to Chibougamau, was completed in 1957, opening up mineral-rich areas and linking them with the industrial centres of the province. Another branch of this line, to serve Mattagami Lake mines in northwestern Quebec, will be constructed during 1961-62; it will be 60 miles in length and cost an estimated $9,660,000. The 52-mile line from Optic Lake to Chisel Lake in Manitoba, built at a cost of $8,800,000 to connect a base metal mining development with the smelter at Flin Flon, was completed in September 1960.

While new construction has added considerably to single track milage placed in operation in the past few years, other lines have been abandoned because they have become unprofitable. Thus, new milage is not clearly reflected in the totals shown in Table 1.

1.—Railway Track Milage Operated, 1900-59

NOTE.—Figures of total milage of single track operated for 1835-1909 are given in the 1941 Year Book, p. 546; for 1911-14 in the 1954 edition, p. 786; for 1916-24 in the 1955 edition, p. 830; and for 1926-49 in the 1956 edition, p. 792.

[1] Newfoundland included from 1950. [2] Includes 28 miles of joint track. [3] Excludes 51 miles of joint track. [4] Excludes 52 miles of joint track.

Rolling-Stock.—Although the figures of Table 2 show the number of the different types of rolling-stock in operation at Dec. 31 of the years 1951 to 1959, they do not by any means give a complete picture of rolling-stock capacity for service. Each year hundreds of units, particularly freight cars, are retired and replaced by more efficient equipment, much of it specially designed and engineered for specific hauling jobs. Improvement in the efficiency of car use is also a factor that may reduce the amount of equipment required. Between 1951 and 1959 the average capacity of box cars increased from 44.3 tons to 46.8 tons, of gondola cars from 62.0 tons to 65.7 tons, flat cars from 43.3 tons to 47.0 tons, hopper cars from 59.4 tons to 66.7 tons, ore cars from 60.0 tons to 79.6 tons and of all freight cars from 46.0 tons to 51.1 tons. The average tractive power of locomotives advanced during the same period from 42,741 lb. to 53,368 lb. Table 2 shows the increasing number of diesel locomotives in service up to the end of 1959; rapid replacement of steam units continued during 1960 and by the end of the year all rail transportation could be handled by diesel power, although some steam equipment was still in operation.

[1] Includes one gasoline locomotive. [2] Includes 13 cars not specified as to type. [3] Includes 20 cars not specified as to type.

Subsection 2.—Finances

The tables in this Subsection give information on capital liability and capital investment, earnings, operating expenses, employees and their earnings and government aid to all railways.* Financial statistics of government-owned railways are given separately and in detail in Subsection 4. A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific railways on Jan. 1, 1956, and for all other railways on Jan. 1, 1957. In transportation statistics a distinction is made between expenditures and expenses. In this Subsection, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operations incident thereto, including maintenance and depreciation of the plant used in such service.

Capital Liability and Investment.—The capital liability of railways operating in Canada for the years 1940 to 1959 is shown in Table 3. The increase of $191,962,959 in 1959 over 1958 compares with an increase in investment in road and equipment property of $255,224,143 as shown in Table 4.

---

* Statistics for individual railways are given in DBS annual report *Railway Transport*, published in six parts (Catalogue Nos. 52-207—52-212).

3.—Capital Liability of Railways, 1940-59

NOTE.—Figures for 1876 to 1925 are given in the 1927-28 Year Book, p. 649, and those for 1926-39 in the 1947 edition, p. 662.

(Exclusive of Canadian railway capital owned by Canadian railways)

Year	Stocks	Funded Debt	Total	Year	Stocks	Funded Debt	Total
	$	$	$		$	$	$

Cumulative Investment to Dec. 31.	4,777,279,050[1]	5,445,804,080[2]	5,815,448,817[3]	6,124,030,484	6,379,254,627

[1] Includes investments totalling $121,230,690 of the Quebec North Shore and Labrador Railway which reported for the first time in 1955. [2] A restatement of investment totals by a number of roads adopting the new Uniform Classification of Accounts in 1956 increased the cumulative figure by $220,466,803; a distribution of this amount is not available. [3] Includes investments totalling $11,188,835 of the British Columbia Electric Railway which reported for the first time in 1957.

Revenues and Expenses.—The ratio of expenses to revenues of railways operating in Canada was 95.24 p.c. in 1959 compared with 86.94 p.c. ten years previously; the high for the period 1950-59 was 97.30 p.c. recorded in 1958. The trend of both revenues and expenses was generally upward during the period, revenues increasing by 27.7 p.c. and expenses by 39.9 p.c. The high point for operating revenues was reached in 1956. Because outlay increased more rapidly than income during the ten years, the net operating revenue per mile of line dropped from $2,914 in 1950 to $1,289 in 1959, although the lowest figure during the period was recorded in 1958 at $696.

5.—Operating Revenues and Expenses of Railways, 1950-59

NOTE.—Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition.

Year	Total Operating Revenues	Total Operating Expenses	Ratio of Operating Expenses to Operating Revenues	Per Mile of Line			Freight Train Revenue per Freight Train Mile	Passenger Train Revenue per Passenger Train Mile

[1] Reported as operating expenses in accordance with the Uniform Classification of Accounts adopted in 1956.

Employment and Salaries and Wages.—During the period 1950-58 the number of railway employees fluctuated between a low of 190,385 in 1950 and a high of 215,324 in 1956; the 1959 figure was slightly below that of 1950. In the same period annual average salaries and wages increased almost steadily from $2,747 to $4,150. Maintenance-of-equipment employees, on hourly rates, worked 16 p.c. fewer average hours and were paid 87 p.c. more wages per hour; average hours worked by transportation employees were 15 p.c. fewer, while their pay per hour was about 77 p.c. higher. These figures reflect salary and wage increases and the effects on employment of the five-day work week inaugurated in 1951. Statistics from 1956 have been reported in accordance with the revised "Canadian Classification of Railway Employees and Their Compensation" which became effective Jan. 1, 1956.

7.—Railway Employees and Their Earnings, 1950-59

NOTE.—Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for 1912-39 are given in the 1941 Year Book, p. 551, and for 1940-49 in the 1951 edition, p. 723.

Year	Employees	Total Salaries and Wages	Average Salaries and Wages	Ratio of Total Payroll (charged to operating expenses) to—

[1] Includes employees engaged in cartage and highway transport (rail) operations.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the federal or provincial governments since 1939.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1959 amounted to $1,335,510,205; this amount includes $97,756 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

Subsection 3.—Passenger and Freight Traffic

Tables 8 and 9 show passenger and freight statistics for all railways for the years 1950-59. A separate analysis of the operations and traffic of the Canadian National Railways is given at pp. 789-792.

[1] Includes caboose miles but excludes miles made in passenger and non-revenue trains. [2] Excludes traffic handled by more than one railway; see Table **10** for details of freight carried.

The total tonnage of freight carried was 8.2 p.c. higher in 1959 than in 1958. Among the main commodity groups, agricultural products and animal products recorded decreases but mine products were up 18.8 p.c., forest products 1.2 p.c. and manufactures and miscellaneous products 5.6 p.c. Of the 166,095,149 tons moved in 1959 (excluding freight handled by more than one railway and in intermediate switching), mine products accounted for 42.9 p.c., manufactures and miscellaneous products for 29.6 p.c., agricultural products 16.8 p.c., forest products 8.9 p.c., animal products 0.9 p.c. and less than carload freight for 0.9 p.c.

10.—Commodities Hauled as Freight on Railways, 1956-59

Note.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

Railway Accidents.—The figures given in Tables **11** and **12** of persons killed or injured on railways include those involved in both train and non-train accidents. All passengers injured are included in the figures but, for employees, only those that kept the employee from his work for at least three days during the ten days following the accident are recorded.

11.—Passengers, Employees and Others Killed or Injured on Railways, 1950-59

NOTE.—Figures for 1919-49 are given in the corresponding tables of previous Year Books beginning with the 1922-23 edition.

Year	Passengers		Employees		Others[1]		Totals	
	Killed	Injured	Killed	Injured	Killed	Injured	Killed	Injured
	No.	No.	No.	No.	No.	No.	No.	No.

1958	1	124	46	3,315	280	445	327	3,884
1959	9	193	42	3,256	265	627	316	4,076

[1] Includes postal, express and pullman employees, trespassers and others.

Accidents tabulated include all those in which railway trains were involved and accidents on railway property. The classification of accidents used for DBS vital statistics treats collisions between motor vehicles and trains as motor vehicle accidents; provincial statistics also class them as motor vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle.

Subsection 4.—The Canadian National Railway System*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. Its history is presented in a special article published in the 1955 Year Book at pp. 840-847. More detailed information than can be given here is obtainable from DBS annual report *Canadian National Railways* (Catalogue No. 52-201).

Financial Statistics.—The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the special article mentioned above. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also, for a term of ten years ending Dec. 31, 1961, the Railway is not obliged to pay interest on $100,000,000 of its long-term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced.

---

* The Hudson Bay Railway, formerly managed and operated for the Federal Government by the CNR, was absorbed into the Canadian National Railway System on Jan. 1, 1958, to be operated in the same manner as other Canadian Government railway lines. Statistics of the Hudson Bay Railway are therefore included with CNR data for 1958 and subsequent years.

[1] Includes "loans and bills receivable" and "rents receivable".

The financial details presented in Table **15** are those of the entire Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications throughout, and highway transport (rail) operations from 1956. In conformity with the requirements of the Uniform Classification of Accounts, tax accruals and rents have been charged to operating expenses since Jan. 1, 1956.

15.—Total Revenue, Operating Expenses, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System,[1] 1951-60

Note.—Figures for 1911-25 are given in the 1936 Year Book, p. 660; for 1926-39 in the 1942 Year Book, p. 590; for 1940-48 in the 1951 edition, p. 731; and for 1949-50 in the 1960 edition, p. 819.

Section 2.—Express Companies

Express, which is actually expedited freight carried on passenger trains, is one of the services provided by companies which do not own the means of conveyance but use the facilities of railway companies under contract. The majority of such contracts provide for payment to the railways of a fixed percentage of the gross express revenue.

Express companies are organized under authority of federal legislation and their business concerns the rapid transit of valuable or perishable commodities and animals, the delivery of parcels and the issuing of financial papers, money orders, travellers cheques and letters of credit. Express rates are usually much higher than freight rates and the two services are not normally competitive. Both tariffs are subject to the approval of the Board of Transport Commissioners.

Five express organizations operate in Canada—four Canadian and one American. The Canadian Pacific Express Company is a subsidiary of the Canadian Pacific Railway Company and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Algoma Central and Hudson Bay Railway, the Canadian National Railway System, and the Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency Incorporated of the United States operates over the Canadian sections of United States railways and over the route from Skagway in Alaska to points in Yukon Territory. Operations of the Algoma Central and Hudson Bay Railway express department were reported for the first time in 1957. No statistics are available on the volume of express traffic because much of it consists of parcels and small lots that cannot be classified.

17.—Summary Statistics of Express Companies, 1950-59

NOTE.—Figures for 1911-49 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

Year or Company	Milages Operated in Canada[1]	Gross Earnings	Operating Expenses[2]	Express Privileges[3]	Net Operating Revenue

[1] Full-time employees only for 1950-53 and all employees, including part-time, for 1954-59.

Section 3.—Urban Transit Systems

The collection of statistical information on urban transportation systems has been extensively reorganized in the past few years. Because of major changes made recently in the types of vehicles used for mass passenger movement in urban centres, the statistical series that began with the financial and operating statistics of electric railways and later included their motor bus and trolley coach lines, became quite inadequate. The current series, which was started in 1956, includes operations of motor buses, trolley coaches, streetcars and subway cars carrying passengers in urban and suburban service.

20.—Summary Statistics of Urban Transit Systems, 1956-59

PART III.—ROAD TRANSPORT*

Highways and motor vehicles are herein treated as related features of transportation. An introductory section summarizes provincial regulations regarding motor vehicles and motor traffic.

Section 1.—Provincial Motor Vehicle and Traffic Regulations

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at pp. 797-798.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized as follows.

Operators' Licences.—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and Quebec, and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually, except in Alberta and British Columbia where it is renewable every five years, and in New Brunswick and Manitoba where it is renewable every two years. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences may be granted to those who have not reached the specified age.

Motor Vehicle Regulations.—In general, all motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back of trailers). In most provinces, in event of sale the registration plates stay with the vehicle but in Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova Scotia vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is 90 days and British Columbia where it is six months) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

---

* Except as otherwise indicated, the material in this Part has been revised in the Transportation Section, Public Finance and Transportation Division .Dominion Bureau of Statistics.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Quebec and New Brunswick is 60 miles an hour in daytime and 55 at night, in Manitoba and Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highways in Alberta where maximum speeds are 65 in daytime and 55 at night. In Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour. In the other provinces the maximum speed permitted is normally 50 miles an hour. Slower speeds are always required in cities, towns and villages, when passing schools and public playgrounds, at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In almost all provinces, truck speed limits are at least five miles an hour below automobile speed limits. In all provinces and territories, accidents resulting in personal injury or property damage of $100 or more must be reported to a police officer (in Quebec to the Motor Vehicle Service) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Driver Licensing Controls.—All provinces impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of the car, or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

Safety Responsibility Legislation.—Each province has enacted legislation under this heading (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of a serious offence (impaired driving, driving under suspension, etc.) or a person involved directly or indirectly in an accident who is not covered for third-party insurance at the time of the accident. The suspension remains effective until any penalty or judgment has been satisfied and proof of financial responsibility for the future is filed. In Manitoba, Saskatchewan, Alberta, British Columbia and the Yukon Territory, uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of $100 ($200 in Saskatchewan and $250 in British Columbia).

Although safety responsibility legislation has not been enacted in the Northwest Territories, the Motor Vehicle Ordinances there require the owner of a motor vehicle residing in the southern Mackenzie District to submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration. In the Yukon Territory, proof of insurance must be supplied before vehicle licence is issued. When the insurance expires or is cancelled, vehicle licence plates must be returned to the Registrar of Motor Vehicles.

Unsatisfied Judgment Fund.—Legislation has been enacted in all provinces except Quebec and Saskatchewan and in the Territories, usually in the form of an amendment to the motor vehicle laws of the province, providing for the establishment of an Unsatisfied Judgment Fund out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. The Fund is created by the collection annually of an Unsatisfied Judgment Fund fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued, except in British Columbia and in Nova Scotia where the Fund is maintained by insurance companies. This fee does not exceed $1 per annum except that Ontario collects $5 from each uninsured owner of a motor vehicle at the time of registration. A feature of this legislation which is contained in some provincial statutes provides for the payment of judgments in the so-called 'hit-and-run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles; any judgment secured against the Registrar is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In Ontario, Alberta and British Columbia the limits are $10,000 for one person and $20,000 for two or more persons injured in one accident. Ontario and Alberta provide for claims up to $2,000 for property damage. In Manitoba the legal limits are $10,000, $20,000 and $1,000, respectively, while other provinces retain lower limits of $5,000, $10,000 and $1,000. For hit-and-run accidents, payments are made for personal injuries or death only.

Sources of information on provincial motor vehicle and traffic regulations:—

Newfoundland

Administration.—Deputy Minister of Finance, St. John's.

Legislation.—The Highway Traffic Act, 1951, as amended.

Prince Edward Island

Administration.—The Provincial Secretary, Charlottetown.

Legislation.—The Highway Traffic Act (RSPEI 1951, c. 73).

Nova Scotia

Administration.—Registry of Motor Vehicles, Department of Highways, Halifax.

Legislation.—The Motor Vehicle Act (1954, c. 184) as amended, and the Motor Carrier Act (RSNS 1923, c. 78) as amended.

New Brunswick

Administration.—Motor Vehicle Division, Provincial Tax Branch, Department of Provincial Secretary-Treasurer, Fredericton.

Legislation.—The Motor Vehicle Act (RSNB 1955) as amended.

Quebec

Administration.—Motor Vehicle Service, Provincial Revenue Offices, Parliament Bldgs., Quebec.

Legislation.—The Highway Code (RSQ 1941, c. 142) as amended.

Ontario

Administration.—Ontario Department of Transport, Toronto.

Legislation.—The Highway Traffic Act (RSO 1960, c. 172), the Public Vehicles Act (RSO 1960, c. 337) and the Public Commercial Vehicles Act (RSO 1960, c. 319).

Manitoba

Administration.—Minister of Public Utilities, Winnipeg.

Legislation.—The Highway Traffic Act (RSM 1954, c. 112) as amended.

Saskatchewan

Administration.—Treasury Department, Highway Traffic Board, Revenue Building, Regina.

Legislation.—The Vehicles Act, 1957.

Alberta

Administration and Legislation.—The Vehicles and Highway Traffic Act (RSA 1955, c. 356) and the Motor Vehicles Accident Indemnity Act (RSA 1955, c. 209) are administered by the Motor Vehicle Branch, Department of Highways, Edmonton. The Public Service Vehicles Act (RSA 1955, c. 265) and the Rules and Regulations are administered by virtue of authority vested in the Highway Traffic Board, Department of Highways, Edmonton.

British Columbia

Administration and Legislation.—Enforcement of the Motor Vehicle Act, the Commercial Transport Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Motor Carrier Act is administered by the Public Utilities Commission, the Motor Vehicle Act by the Superintendent of Motor Vehicles and the Commercial Transport Act by the Minister of Commercial Transport, Victoria, B.C.

Yukon Territory

Administration.—Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Registrar of Motor Vehicles, Government of the Yukon Territory, Whitehorse, Y.T.

Legislation.—The Motor Vehicles Ordinance (Revised Ordinances 1958, c. 77) as amended.

Northwest Territories

Administration.—Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

Legislation.—The Revised Ordinances of the Northwest Territories (SC 1956, c. 72) as amended.

Section 2.—Highways and Roads

The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1959, the milage of highways and rural roads in Canada was 423,035, an increase of 25,654 miles over the 397,381 miles reported for 1958. The main reason for this increase was the inclusion, in 1959 for the first time, of milages under the jurisdiction of rural municipalities and small urban municipalities of less than 1,000 population which had been classed previously as rural. The inclusion of these milages was discounted in some provinces where the provincial authority had been able, in previous years, to estimate milage under rural municipality control.

The total of 423,035 miles includes all roads under provincial jurisdiction, federal roads, and local roads under municipal jurisdiction other than the milages in metropolitan areas (see p. 151) and urban centres of more than 1,000 population. The latter are given separately under the heading "Urban Roads", p. 803.

1.—Road Milages classified by Type and by Province, 1958 and 1959

NOTE.—Urban streets are not included; see text above.

[1] Excludes milages of all roads on Indian reservations except those with bituminous surface. [2] Includes milages under jurisdiction of rural municipalities and small urban municipalities previously classed as rural.

Total expenditures on roads and highways reached a new high in the year ended Mar. 31, 1960, amounting to $829,117,828, 7.3 p.c. above the total for the previous fiscal year; construction expenditures increased by 8.7 p.c. but maintenance costs were 1.8 p.c. lower. Table 2 shows expenditure by province and federal-provincial-municipal distribution of such expenditure for the years ended Mar. 31, 1956-60.

[1] Includes payments from railways and contributions from the Railway Grade Crossing Fund toward elimination of grade crossings, etc., amounting to $1,116,876 in 1955-56 and $2,700,155 in 1956-57. [2] Includes federal administrative costs *re* Trans-Canada Highway amounting to $462,600 in 1955-56, $168,000 in 1956-57, $235,000 in 1957-58, $242,100 in 1958-59 and $204,000 in 1959-60. [3] Includes $8,974,818 for property purchases. [4] Includes expenditures of $1,767,698 by municipalities in Manitoba for which no breakdown is available. [5] Includes expenditures of $2,573,262 by municipalities in Manitoba, of $14,932,793 by municipalities in Saskatchewan and of $1,514,533 by the British Columbia Department of Highways for which no breakdown is available. [6] Includes expenditures of $3,091,156 by municipalities in Manitoba for which no breakdown is available.

The Trans-Canada Highway.—The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with other data on specifications and proposed route across the participating provinces, in the 1951 Year Book, pp. 631-634. Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces (except Quebec). The Act set the standards to be met—a hard-surfaced, two-lane highway, 22 to 24 feet wide with ample shoulder widths, bridge clearances and sight distances, low gradients and curvature, a maximum load capacity of nine tons for one axle, and the elimination, wherever possible, of railway grade crossings. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces. Those sections within the National Parks were to be the responsibility of the Federal Government. Federal contribution was to be 50 p.c. of the cost of new construction and up to 50 p.c. of the cost of construction of sections of highway built prior to the passing of the Act, where those sections were properly incorporated in the Trans-Canada Highway. Total Federal Government contribution under this Act was limited to $150,000,000.

An amendment to the Act in 1956 increased the extent of federal financial participation by providing for an additional 40 p.c. contribution on one-tenth of the highway milage in each province. The construction period was extended to Dec. 31, 1960 and the aggregate limit of federal funds available for the purpose was increased to $250,000,000. A second amendment passed in March 1959 added $100,000,000 to the federal contribution and a third amendment passed in June 1960 raised the total amount of funds available for federal expenditure under the Act and its amendments to $400,000,000. The 1960 amendment also extended for three years the period in which construction costs might be incurred under the Act.

On Oct. 27, 1960, an agreement was signed between the Federal and Quebec Governments; thus, all provinces are now participating in the Trans-Canada Highway.

Under present agreements, a paved highway is to be completed across Canada by May 31, 1964—a highway constructed in conformity with the general specifications laid down in the Act or paved to a satisfactory provincial standard. The latter concession was made to eliminate the need for reconstructing highways already paved in order to speed up the work on other sections. However, federal participation in the cost is limited to that portion constructed to Trans-Canada Highway standards.

In the ten provinces the routes, as amended in 1960, totalled 4,877 miles—in Newfoundland, 540 miles; Prince Edward Island, 71 miles; Nova Scotia, 318 miles; New Brunswick, 390 miles; Quebec, 400 miles; Ontario, 1,453 miles; Manitoba, 309 miles; Saskatchewan, 406 miles; Alberta, 282 miles; British Columbia, 568 miles; and in the National Parks, 140 miles. Later revisions in location have made some minor alterations. For instance, the milage through Mount Revelstoke and Glacier National Parks in British Columbia was shortened by a change of route, as was the milage in Newfoundland when the Highway was routed through Terra Nova National Park. The Federal Government allocated the sum of $9,581,000 for construction of the Highway through the National Parks during the year ended Mar. 31, 1960.

Contractual commitments for new construction on the Highway up to January 1961 amounted to $615,565,310, of which the federal share, including the additional 40 p.c. under the amended Act, was $365,762,241. Federal payments to the provinces during this period for prior, interim and new construction totalled $291,363,702. On-site labour expended on the Highway up to Mar. 31, 1960 was 9,507,375 eight-hour man-days of employment; off-site employment required for the provision of necessary material and services was estimated at 16,162,538 man-days.

In Saskatchewan, work was completed over the whole route of 406 miles in 1957 and the Highway was officially opened and dedicated on Aug. 21 of that year. In provinces more handicapped by problems of terrain and construction, progress was reported. At Dec. 31, 1960, contracts for 3,396 miles of grading had been approved and the equivalent of 3,221 miles built; paving to specified standards had been completed over a distance of 2,896 miles; and 495 bridges, overpasses and other structures of more than 20-foot span had been approved for construction.

Roads to Resources and Roads in the North.*—The Federal Government's Roads-to-Resources program entered its fourth year in 1961 with construction proceeding at a good pace in all ten provinces. As the year opened, more than $45,000,000 worth of work had been carried out since 1958 and contracts exceeding $84,000,000 had been approved. Federal payments to the provinces amounted to more than $20,000,000—or close to one-half the cost of work completed.

Expenditures for the year ended Mar. 31, 1962 cannot be forecast in detail. Ten separate road programs are being carried on and many factors—weather particularly—affect the progress of construction. But, based on data supplied by the provinces, plans for 1961-62 call for a combined expenditure of $22,500,000. Under the terms of the Roads-to-Resources agreements, the Federal Government will reimburse the provinces for half this amount.

---

* Prepared in the Editorial and Information Division, Department of Northern Affairs and National Resources, Ottawa.

When the program is completed it will represent a joint investment of at least $150,000,000. Most provinces, however, are carrying out work in excess of $15,000,000 so that direct expenditures may reach a national total of $175,000,000. This will not affect the federal contribution, however, which remains at $7,500,000 to each province. The current milage—4,504—will be increased when Quebec, Ontario and Newfoundland have fully developed their programs.

The Roads-to-Resources program is made up of at least 100 separate projects. While it is not possible to measure the impact of these access avenues on regional economies, the scope of the program and the nature of the work represent thousands of man-hours of employment—work, moreover, spread from coast to coast and throughout many levels of skill and labour. In any province the program may consist of as many projects as can qualify for inclusion and for which there are sufficient funds available. For example, in British Columbia the Roads-to-Resources program is concentrating on a single road, while in New Brunswick it is spread over some 17 separate projects. Except in Nova Scotia and Prince Edward Island where the programs are being devoted to tourist development roads, surfaces will be built of rock or gravel. Road and bridge specifications vary between provinces and within a province, depending on location and type of traffic to be carried. A common characteristic, however, is the effect each will have in increasing productiveness of important resources and in spear-heading exploration of promising areas.

Most of the major resource roads west of the Atlantic Provinces lie within the northern, less-developed half of the provinces. This northern characteristic offers practical aid to provincial initiative already looking beyond more settled regions for fresh sources of minerals, timber and fish, and new prospects for tourist development. Most of the more accessible resource areas of value have been appraised and brought into production and it is realized that exploration must broaden the traditional east-west approach and consider the economic prospects to the north.

Some of the more important Roads-to-Resources routes in Western Canada will eventually link with the system of roads that the Federal Government is building in the Yukon and Northwest Territories; one link has already been achieved by the Mackenzie Highway. The two types of road system are, however, quite distinct. In the Roads-to-Resources program the contribution of the Federal Government, through the Department of Northern Affairs and National Resources, is financial; in the Roads-in-the-North program it includes responsibility for building and maintenance. The Territorial Governments contribute to the construction of certain types of resource roads and maintenance of all resource roads is shared by the Federal and Territorial Governments on an 85-15 p.c. basis.

In September 1960, the first of the new Territorial roads was officially opened—the Great Slave Highway connecting Yellowknife, the largest town in the Territories, with the highway systems of southern Canada. The first passenger bus to make the direct run from Edmonton reached Yellowknife on Jan. 18, 1961. The first 20 miles of an extension to this road from Yellowknife to McKay Lake will be started in 1961. However, the largest single project currently under way in the Northwest Territories is the reconstruction of the Mackenzie Highway, which includes the building of a major bridge near Hay River.

National Film Board

In the Yukon Territory, a $5,000,000 road-construction program, involving the building of five large bridges, will be started during 1961. Some 110 miles of road will be built as part of three projects—the Flat Creek–Eagle Plain road, the Watson Lake Road to Ross River, and the Nahanni Range Road. The largest of these is the Watson Lake–Ross River project. Expenditure during the year on new roads and improvement of existing roads will amount to about $3,500,000 and an estimated $100,000 will be spent on surveys for future development roads.

Urban Roads.—Information on urban roads is obtained from urban authorities in all centres with populations of over 1,000 and also centres with fewer than 1,000 population located within census metropolitan areas. Brief statistical data are given in Table **3**; more detail may be obtained from DBS annual report *Road and Street Mileage and Expenditure* (Catalogue No. 53-201).

Section 3.—Motor Vehicles

Registrations.—Motor vehicle registrations continue to increase year by year, a record of 5,017,686 being reached in 1959. Of that total, 3,812,422 were for passenger cars—one for every 4.5 persons. Registrations by province are given in Table **4** and types of vehicles registered by province in Table **5**.

4.—Motor Vehicles Registered, by Province, 1950-59

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-49 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

Apparent Supply of Automobiles.—The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XIX on Domestic Trade and Prices.

6.—Apparent Supply of New Automobiles, 1950-59

Provincial Government Revenue from Motor Vehicles.—The taxation of motive fuels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1959 the average cost per motor vehicle for operating taxes and licences was about $108. Motive fuel tax rates in the different provinces and territories in 1960 were as follows:—

Province or Territory	*Gasoline*	*Diesel Fuel*	*Liquefied Petroleum Gas*
	cts.	cts.	cts.
Newfoundland	19	19	—
Prince Edward Island	16	16	—
Nova Scotia	17	17	17
New Brunswick	15	15	15
Quebec	13	13	13
Ontario	13	18½	18½
Manitoba	11	11	11
Saskatchewan	12	12	12
Alberta	10	12	10
British Columbia	10	12	12
Yukon Territory	6	6	6
Northwest Territories	1½	1½	1½

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Federal Government revenue from import duties, excise and sales taxes are given in Chapter XXI on Public Finance.

---

[1] Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws. [2] Included with other motor vehicles. [3] Included with miscellaneous revenues and therefore in total. [4] Included with passenger automobiles. [5] Includes commissions allowed to gasoline agents and refunds.

Sales of Motive Fuels.—It is the intention here to provide estimates of the total amount of motive fuel used by motor vehicles on Canadian public roads only. As the information is not available precisely in accordance with the concept, it has been necessary to approach the objective by the process of eliminating the amount of motive fuel used for other purposes. From the total gross sales, the following are subtracted to obtain sales on which the full rate of tax is paid: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds are paid. The resulting data, which are net sales, are considered to be equivalent to the actual amount of motive fuel used on Canadian public highways. Although there is included in net sales an undetermined amount of motive fuel which is taxable but not used on the public highways, including in some provinces aviation gasoline, turbo fuel and motive fuels consumed by power boats, the total effect of this is considered to be insignificant.

Data for gasoline and diesel oil are shown separately in Table 8. Liquefied petroleum gases are included with gasoline. The consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 4.9 p.c. to 2,865,000,000 gal. in 1959. Net sales of diesel oil in 1959 increased by 25.8 p.c. to 120,000,000 gal.

Motor Carriers—Freight.*—Statistics of the common carrier segment of the inter-city and rural motor carrier industry have been collected since 1941. However, as little capital is required to enter the trucking business, many marginal operators are associated with the industry and the large turnover and numerous changes each year have created many problems in the collection of statistics; these are gradually being overcome. Statistics of contract carriers were collected for the first time in 1958. The 3,565 common carrier firms from which usable returns were secured in 1959 reported gross operating revenues of $349,037,573 compared with 3,510 firms reporting $292,719,406 in 1958. Usable returns for contract carriers reported a gross operating revenue of $72,379,453 in 1959.

---

* Statistics are given in more detail in DBS annual report *Motor Carriers—Freight* (Catalogue No. 53-205).

Both groups of the motor carrier freight industry are divided into four classes based on gross annual revenue. Operators of vehicle fleets owned and operated by private companies, where the vehicles are not available for public service, such as dairies, bakeries, department and grocery stores, oil and gasoline distributors and breweries, are excluded.

Passenger Buses.*—The operations of motor carrier companies predominantly engaged in passenger bus service are summarized in Tables 11 and 12. Data refer to the for-hire segment of the industry and only those firms engaged in intercity and rural operations and having an annual gross revenue exceeding $6,000 are covered. Operators predominantly involved in the provision of charter or school bus service are not included.

---

* Statistics are given in more detail in DBS monthly and annual reports *Passenger Bus Statistics* (Catalogue Nos. 53-215 and 53-216).

Motor Transport Traffic.*—Surveys of motor transport traffic in all provinces were placed on a continuing basis in 1957. Approximately 3 p.c. of total registrations were sampled for surveys of truck operations during each quarter of 1958. Commencing with the second quarter of that year, each quarterly sample was spread over three survey weeks with one-third of the sample being used for a seven-day period (Sunday through Saturday) per month. Figures for 1959 were not available at the time of going to press.

Excluding vehicles that do not perform normal transportation services, such as cranes, tow trucks, road building equipment, etc., the average number of trucks licensed in Canada during the year 1958 was 862,775. Of these, 5.9 p.c. were for-hire carriers, 23.8 p.c. were private intercity trucks, 35.9 p.c. were private trucks operated predominantly within urban areas, and 34.4 p.c. were farm trucks. One-third of the total number were registered in Ontario and one-half were registered in the two provinces of Ontario and Quebec.

---

* Statistics are given in more detail in DBS annual reports *Motor Transport Traffic Statistics* for Canada and the provinces (Catalogue Nos. 53-207—53-214).

13.—Average Truck Population, by Type of Operation and Province, 1958

Type of Operation	Atlantic Provinces	Quebec	Ontario	Manitoba	Saskat-chewan	Alberta	British Columbia	Canada
	No.	No.	No.	No.	No.	No.	No.	No.
For-hire	2,523	13,461	16,763	1,329	1,685	9,441	5,301	50,503
Private—								
Intercity	36,093	32,818	73,192	2,553	11,125	16,050	33,792	205,623
Urban	17,004	71,685	127,701	21,063	9,095	24,037	39,043	309,628
Farm	13,270	35,501	62,646	29,783	79,065	65,016	11,740	297,021
Totals	**68,890**	**153,465**	**280,302**	**54,728**	**100,970**	**114,544**	**89,876**	**862,775**

Canadian registered trucks travelled 6,616,000,000 miles in Canada during the year, of which milage 20 p.c. was accounted for by for-hire trucks, 33 p.c. by private intercity vehicles, 32 p.c. by urban trucks and 15 p.c. by farm trucks, the most numerous of all vehicles.

For-hire trucks averaged 184,700 net ton-miles per vehicle and, although amounting to only 5.9 p.c. of total registrations, they accounted for 60 p.c. of the total net ton-miles performed by all commercial trucks in Canada, a result of the comparatively high average yearly milage of for-hire trucks and also of the heavier average load carried (9.9 tons as compared with an average of 4.7 tons for all trucks). The predominance of heavier vehicles in the for-hire group also explains the low milage per gallon of gasoline of 6.3 as compared with an average of 9.7 for all vehicles.

14.—Summary Statistics of Truck Traffic, by Type of Operation, 1958

Motor Vehicle Accidents.—Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. Statistics on all deaths from motor vehicle accidents are shown in Table **15.** A direct comparison of such statistics between the provinces is of little value because of differences in size, population, motor vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has been tabulated. These data still give no weight to differences in use of motor vehicles, variations in climate, road conditions, tourist cars, etc., all of which are factors in accidents.

Data presented in Table **16** relate to traffic accidents only and consequently may not be compared with figures of Table **15** which include details of fatalities occurring elsewhere than on public streets or roads.

15.—Deaths Resulting from Motor Vehicle Traffic and Non-traffic Accidents, by Province, 1950-59

NOTE.—Figures for 1926-49 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

PART IV.—WATER TRANSPORT*

The Canada Shipping Act.—Legislation regarding all phases of shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

Section 1.—Shipping Facilities and Traffic

Subsection 1.—Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However, a large part of the inland and coastal traffic is carried in ships of Canadian registry.

In his major policy statement in the House of Commons on May 12, 1961, the Minister of Transport announced the decision of the Government to exclude the Great Lakes and St. Lawrence River system from some of the reciprocal provisions of the British Commonwealth Merchant Shipping Agreement.

Under the Agreement, all Commonwealth ships enjoy equal privileges with Canadian ships in the carriage of goods and passengers from one port in Canada to another port in Canada, commonly known as the coasting trade. Prior to the completion of the St. Lawrence Seaway most of the domestic Great Lakes traffic was moved in Canadian-registered ships and the rights of other Commonwealth ships in this trade were largely theoretical. After the Seaway was finished the intrusion of other Commonwealth ships, particularly United Kingdom ships, became a reality. The new policy gives legal recognition to a state of affairs that has prevailed in point of fact for many decades and restores the *status quo* as it existed before the advent of the Seaway.

When the statement of policy becomes translated into law, the exclusive right to carry goods and passengers between Canadian ports in the Great Lakes and the St. Lawrence River system from Havre St. Pierre westward will be restored to Canadian-registered ships.

Canadian Registry.—Under Part I of the Canada Shipping Act all ships in excess of 15 tons net register are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp. or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate established under and subject to the laws of some part of Her Majesty's Dominions and having their principal place of business in those Dominions. Under the British Commonwealth Merchant Shipping Agreement all Commonwealth ships are given the general designation 'British Ship'; and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping.

---

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; and canal traffic and statistics of shipping by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[1] Includes N.W.T.—see footnote 2.

[2] Aklavik, N.W.T., closed as a port of registry Dec. 12, 1958. Ships using the Mackenzie River system registered at Edmonton, Alta.

Shipping Traffic.—Before 1952 the only information available on shipping activity in Canada was the number and registered net tonnage of vessels operating in and out of Canadian customs ports and the tonnage of cargoes loaded and unloaded at these ports destined for or arriving from foreign countries. In 1952 the coastwise movement of cargo in and out of customs ports was reported for the first time and in January 1957 the coverage was extended to include tonnage of vessels and tons of cargo in and out of non-customs ports. Reports are not required for vessels of less than 15 registered net tons.

[1] Includes small ports not shown separately.

[2] Includes N.W.T.

The freight movement through a large port takes a number of different forms. The overseas movement of freight loaded on and unloaded from sea-going vessels frequently constitutes a surprisingly small part of the total. Usually the volume from coasting vessels is larger. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Since 1957, shipping statistics are available covering traffic in and out of both customs and non-customs ports. Table **5** shows the principal commodities loaded and unloaded in foreign and coastwise trade at the ten ports handling the largest cargo volumes in 1959.

5.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1959

NOTE.—Only commodities totalling over 50,000 tons are listed.

Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil and grain. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, dry dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Eleven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours that are under the direct supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 132 of these harbours, their remuneration being paid from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the operating authorities, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil and sugar industries. At several of the ports there are also dry dock facilities.

National Harbours Board.—The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Trois Rivières, Montreal, Vancouver, and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. These facilities represent a capital investment of approximately $340,000,000. Current operating revenues and expenditures are given in Table 26, p. 833.

6.—Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1960

Note.—The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

Item	Halifax	Saint John	Quebec	Trois Rivières	Montreal	Vancouver

[1] Includes a 3,000,000-bu. grain storage shed connected with the elevator. [2] Sugar.

Subsection 3.—Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport together with those under the jurisdiction of the St. Lawrence Seaway Authority comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

The canals included under the two classifications—Seaway Canals and Department of Transport Canals— are listed in Table 7 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrew's

Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1959, 51,076,132 tons of freight and 30,559 vessels passed through the canals as compared with 35,096,587 tons of freight and 27,451 vessels during 1958. In addition, to freight and passenger vessels, thousands of pleasure craft are docked through the canals. Vessels locking at Sault Ste. Marie during 1959 carried 193,721 passengers as compared with 139,729 in 1958.

7.—Lengths of Channels and Dimensions of Locks under the Control of the St. Lawrence Seaway Authority or the Department of Transport

The figures in Tables **10** and **11** include duplications where the same freight passes through two or more canals, but in Table **12** duplications in the traffic passing through the St. Lawrence and Welland Ship canals and the Canadian lock at Sault Ste. Mari have been eliminated wherever possible.

Grain trans-shipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other trans-shipping port.

12.—St. Lawrence-Great Lakes Traffic using St. Lawrence, Welland Ship and Sault Ste. Marie Canals, 1959

Canals Used	Up-bound Freight	Down-bound Freight	Total
	tons	tons	tons

St. Lawrence only	3,777,031	2,287,542	6,064,573
St. Lawrence and Welland Ship	7,332,257	7,252,916	14,585,173
St. Lawrence, Welland Ship and Sault Ste. Marie	45,905	186,835	232,740
Welland Ship only	2,132,667	10,401,460	12,534,127
Welland Ship and Sault Ste. Marie	85,443	68,247	153,690
Sault Ste. Marie only	306,348	539,916	846,264
Traffic using United States Locks at Sault Ste. Marie only	**10,269,878**	**59,403,759**	**69,673,637**
Totals	**23,949,529**	**80,140,675**	**104,090,204**

Traffic through the Sault Ste. Marie canals, Canadian and United States, has fluctuated between a high of 128,489,000 tons reached in 1953 and a low of 70,906,000 tons in 1959. The dominant traffic from a tonnage aspect is iron ore which also reached its highest point in 1953 at 98,658,000 tons, decreasing to 54,188,000 tons in 1958 and 47,214,000 tons in 1959. Soft coal has usually been second in volume to iron ore and in the past ten years has declined from 13,301,000 tons in 1950 to a low of 6,389,000 in 1958, rising to 7,361,000 tons in 1959. Although wheat is generally third in tonnage, in 1958 and 1959 it was in second place totalling 7,478,000 and 7,496,000 tons, respectively. Its value over the past quarter-century has been generally higher than that of either iron ore or coal. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

Canadian use of the Panama Canal.—The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of 4,195,000 long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1960 and passing through the Panama Canal, only 44,000 long tons were destined for Eastern Canadian ports. Similarly, of the 495,000 long tons of cargo leaving Eastern Canadian ports and passing through the Panama Canal, 34,000 long tons were destined for Western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 685,000 long tons in the year ended June 30, 1960; the total from any origin arriving at Eastern Canadian ports after having passed through the Panama Canal was 655,000 long tons.

Subsection 4.—The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year Books. A special article carried in the 1956 edition (pp. 821-829) gives detailed information on Great Lakes–St. Lawrence waterway traffic immediately prior to the beginning of construction on the project and another special article carried in the 1960 Year Book, (pp. 851-860) covers the story of the Seaway, its new facilities and services and the movement of freight during the first year of its operation.

The St. Lawrence Seaway Authority, constituted as a Corporation by Act of Parliament in 1951 (RSC 1952, c. 242), undertook the construction (and subsequent maintenance and operation) of Canadian facilities between Montreal and Lake Erie to allow 27-foot navigation, concurrently with the construction of similar facilities in the International Rapids Section of the St. Lawrence River by the Saint Lawrence Seaway Development Corporation of the United States. The Seaway was opened to commercial traffic on Apr. 1, 1959 and officially opened on June 26, 1959. With the opening of the Seaway, certain ancillary canals were transferred to the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes. These include the Lachine, a section of the Cornwall Canal, a portion of the third Welland Canal and the Canadian locks at Sault Ste. Marie. Tolls are not assessed against vessel movements on these waterways and traffic data for them are not included in this Subsection.

Tables **13** and **14** give combined traffic statistics of the St. Lawrence and Welland Canals for the year 1960 (the first available in this form). Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway. On this basis, 5,152 ships carrying more than 11,058,000 tons of cargo moved upbound through the Seaway in 1960 and 5,124 vessels carrying 22,648,000 tons moved downbound. Ocean-going ships carried 23.8 p.c. of the total cargoes, lakers 76.1 p.c. and other craft 0.1 p.c. There is still evident an imbalance of loading, 49.7 p.c. of the gross registered tonnage of all vessels upbound being in ballast compared with 50.3 p.c. loaded. Downbound, however, only 17.6 p.c. of the tonnage was in ballast.

Of the total tonnage carried upbound in 1960, 8,946,000 tons were domestic cargo and 2,113,000 foreign traffic; downbound, 17,333,000 tons were domestic freight and 5,315,000 tons were carried to and from foreign ports.

On the Montreal–Lake Ontario section, upbound freight decreased 19.8 p.c. in 1960 compared with 1959, but downbound traffic increased by 19.5 p.c. This decrease in upbound traffic was accounted for almost entirely by a reduction in the volume of iron ore shipped from St. Lawrence ports to Hamilton and Lake Erie. The number of transits both upbound and downbound were 583 fewer in 1960 than in 1959, indicating a slight increase in the size of vessel using this portion of the Seaway and in the volume of cargo carried. Bulk cargo comprised 88.9 p.c. of the total traffic through the Montreal–Lake Ontario section for 1960, amounting to 18,056,000 tons compared with 18,643,000 tons in 1959. General cargo totalled nearly 2,253,897 tons, an increase of 15.6 p.c. over the 1959 season. The principal commodities through the St. Lawrence canals were: iron ore, wheat, fuel oil, barley, corn and bituminous coal. Traffic patterns according to the origin or destination of the voyages show that 30.8 p.c. of the total movement was between two Canadian ports, one-third moved between Canadian and United States ports and 36.6 p.c. consisted of foreign trade to and from Canada and the United States.

In the Welland Canal there were 7,536 transits in 1960 and the registered gross tonnage of all transiting vessels was 35,528,265. Cargo volume amounted to 8,372,714 tons upbound and 20,876,975 downbound and bulk cargo accounted for 93.5 p.c. of the traffic. Although many vessels pass through both the St. Lawrence and the Welland Canals on "through" trips, there is a substantial amount of local traffic between Great Lakes ports which involve only the Welland Canal. These movements are largely iron ore, grain and coal. The Welland Canal traffic was nearly 9,000,000 cargo tons greater than that reported for the Montreal–Lake Ontario section.

Income of the St. Lawrence Seaway Authority for the first 12-month period of Seaway operation (1960) amounted to $9,360,642, comprising toll revenue of $7,156,249 assessed for transits through the Seaway locks between Montreal and Lake Ontario, and $1,326,497 on transits through the Welland Canal, plus sundry revenues (rentals, wharfage, bridge revenue, etc.) amounting to $877,896. Operating and maintenance expenses amounted to $4,873,082 and administrative expenses were $1,323,950, making a total of $6,197,032, including an amount of $288,089 for non-toll canals. Table **15** gives toll revenue separately for the Montreal–Lake Ontario section and the Welland Canal, variously classified for the years 1959 and 1960. Other financial statistics are given in Section 2, p. 832.

Pleasure craft locked through the Montreal–Lake Ontario section canals numbered 1,669 upbound and 1,726 downbound in 1960, and those locked through the Welland Canal numbered 677 upbound and 780 downbound.

13.—Summary Statistics of Total St. Lawrence Seaway Traffic, 1960

Subsection 5.—Marine Services of the Federal Government

The services covered in this Subsection deal with aids to navigation, including the maintenance of the St. Lawrence River Ship Channel, steamship inspection and pilotage service.

Aids to Navigation.—Included under aids to navigation are the lighthouses and the whole system of marine danger signals on the East and West Coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the Mackenzie River and Arctic passages, and the inland rivers and lakes—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described at p. 829. A further aid to safe navigation is found in the chains of radio signal and direction-finding stations described under Marine Navigation at p. 867. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

16.—Marine Danger Signals Maintained in Canada, Years Ended Mar. 31, 1959 and 1960

Note.—In addition to the aids to navigation listed, approximately 10,400 unlighted buoys, balises, dolphins and beacons are maintained. Lists of marine danger signals maintained from 1929 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Type of Signal	1959	1960	Type of Signal	1959	1960
	No.	No.		No.	No.
Lights	3,022	3,074	Hand fog horns and bells	105	98
Lightships	4	4	Lighted and combination lighted whistling and bell buoys	1,119	1,214
Light-keepers	980	930	Whistling buoys	30	30
Fog whistles and sirens	32	39	Bell buoys	110	108
Diaphones and tyfons	267	268	Explosive signals	4	3
Mechanical bells and gongs	20	18			

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Ice-breaking operations are carried on at the beginning and at the end of winter to prolong the season of navigation in important waters that freeze over—particularly in connection with sea-going shipping from Montreal—and to prevent flood conditions during the spring ice break-up.

St. Lawrence River Ship Channel.—This channel extends from about 40 miles below Quebec City to the foot of Lachine Canal at Montreal, a distance of 200 miles. About 130 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. This section comprises about 115 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

A fleet of ice-breaking vessels is maintained to facilitate the movement of shipping between Montreal and the sea during the opening and closing of navigation, and to alleviate flood conditions in low-lying areas.

17.—Seasons of Open Navigation on the St. Lawrence Ship Channel, 1941-60

Note.—Figures from 1882 are given in the corresponding table of previous Year Books beginning with the 1934-35 edition.

[1] "Channel Open" means the route can be navigated although there may be floating ice in the river.

Steamship Inspection.—The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the approval of design of the hulls, machinery and equipment of ships; inspection during construction; periodic inspection and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; and the certification of marine engineers. The Board also looks after the interests of the Federal Government in schools for marine engineers.

The Chairman and the Board of Steamship Inspection are located at Ottawa and there are field offices in the principal ocean and inland ports.

Pilotage.—Pilotage service functions under the provisions of Part VI of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 22 pilotage districts, in nine of which the Minister of Transport is the pilotage authority (see Table 19); in each of the other districts the authority is a local body appointed by the Governor in Council.

19.—Pilotage Service, by Pilotage District, Years Ended Mar. 31, 1959 and 1960

Totals	**36,986**	**126,411,644**	**36,468**	**136,206,489**

In addition there are 21 districts in Newfoundland under the local pilotage authority. These districts continued to be administered under Newfoundland statutes after union with Canada (Mar. 31, 1949). Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

Section 2.—Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government. Capital expenditure by municipalities and private capital expenditure are confined almost entirely to terminal or dockage facilities. On the other hand, investment in shipping has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.—The only figures available of federal capital expenditure on Canadian waterways are those contained in the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance and in the annual report of the St. Lawrence Seaway Authority. It must be realized that such expenditure cannot be regarded as an accurate indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of works that have been superseded, such as, for example, the first Welland canals and the now flooded St. Lawrence River canals. To this extent, such figures are an over-statement of the present value of the works in use. The figures are further limited by the fact that they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Thus, such capital expenditure on waterways is not included in this publication, with the exception of that made by the National Harbours Board on facilities under its jurisdiction. Capital values of the fixed assets administered by the Board are shown as at Dec. 31, 1958 and 1959 in Table **20**. These figures include all buildings, machinery and durable plant improvements and have been subject to deductions for depreciation and the scrapping or abandonment of plant and therefore represent a fair approximation of the present value of the properties.

20.—Capital Values of Fixed Assets Administered by the National Harbours Board, as at Dec. 31, 1958 and 1959

NOTE.—Compiled from the annual reports of the National Harbours Board.

Waterways Expenditure and Revenue on Consolidated Fund Account.—Expenditure under this heading (Tables 22 to 24) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport, the Department of Public Works and the St. Lawrence Seaway Authority is shown in Table 25.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 27. Operating revenue and expenditure of facilities administered by the National Harbours Board are shown separately in Table 26.

22.—Department of Transport Expenditures on Marine Service, charged to Consolidated Deficit Account, Years Ended Mar. 31, 1959 and 1960

PART V.—CIVIL AIR TRANSPORT*

Section 1.—Administration and Development

Historical Developments.—Canada's aviation history dates back to 1909 when the *Silver Dart*, piloted by Jack McCurdy (Hon. J. A. D. McCurdy, former Lieutenant-Governor of Nova Scotia), flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire.

There was little aviation development in Canada until World War I. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and intercity air services. During this period the flying clubs movement received government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

World War II was a period of intensive construction of airports and aerodromes to meet the requirements for the training of airmen under the British Commonwealth Air Training Plan. At the end of the War, many Service-trained Canadian airmen turned to commercial flying and were absorbed by existing operating companies or helped to develop other flying services. Transatlantic air services were inaugurated by the Department of Transport during the War and were turned over to Trans-Canada Air Lines which was created by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service for regular scheduled operations. Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. In 1949, the Canadian Pacific Air Lines was designated to provide transpacific services on behalf of Canada and in the spring of 1959 began the operation of one daily transcontinental flight each way between Montreal and Vancouver. Current operations of TCA and CPA are covered on pp. 836-837.

---

* Sections 1 and 2 of this Part were revised in the Department of Transport and Section 3, except where otherwise indicated, in the Transportation and Public Utilities Section, Public Finance and Transportation Division, Dominion Bureau of Statistics. For military air transportation, see Chapter XXV on Defence of Canada.

The Control of Civil Aviation.—The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act 1919 and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain regulatory functions of commercial air services (see p. 778). Part III deals with matters of government internal administration in connection with the Act.

Weather Services.—Weather services are provided by the Meteorological Branch, Department of Transport, to meet the demands of the general public and all basic economic endeavours such as agriculture, industry, forestry, shipping and fishing. Meteorological service is provided to national and international aviation. The military meteorological requirements in Canada and overseas are met by special co-operative arrangements with the Department of National Defence. The reporting and forecasting of ice conditions in navigable waters, both inland and coastal, is a rapidly expanding service.

There are 54 forecast offices in Canada, one on shipboard and four in Europe. Forecast offices are linked by 55,200 miles of teletype and radioteletype circuits, and a national facsimile system 11,200 miles long is used for the distribution of meteorological information in chart form. As of Jan. 1, 1961, the Branch maintained 240 synoptic stations engaged in a round-the-clock observation program, a network of 32 radiosonde stations including five in the Arctic operated jointly with the United States, 71 stations recording upper winds, 1,650 climatological stations. One Ocean Weather Station in the Pacific, 1,000 miles west of Vancouver, is maintained under International Agreement. (See also p. 45.)

Air Industries and Transport Association.—Commercial flying schools that are members of the Air Industries and Transport Association numbered 70 at the end of 1960. During that year the number of students instructed and graduated as private pilots was 1,827, the number graduated as commercial pilots was 160 and 110,515 instructional hours were flown.

Royal Canadian Flying Clubs.—At the end of 1960 there were 39 flying clubs connected with the Royal Canadian Flying Clubs Association. The total membership was 11,255 and the aircraft available for instructional purposes numbered 209. During the year, 1,792 students were instructed and graduated as private pilots and 116 students were graduated as commercial pilots. Instructional hours of flying totalled 123,407.

International Air Agreements.—The position of Canada in the field of aviation as well as its geographical location makes imperative co-operation with other nations of the world engaged in international civil aviation. Canada took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization

(ICAO) which has headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appears in the 1952-53 Year Book, pp. 820-827.

In recent years Canada has been a signatory to agreements concerning civil aviation with Australia, New Zealand, Belgium, Denmark, France, Ireland, Japan, Mexico, the Netherlands, Norway, Peru, Portugal, Sweden, Switzerland, the United Kingdom and the United States.

Section 2.—Air Services

Air transport services may be grouped into two broad classes—Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft, serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:—

(1) Regular Specific Point Air Services—operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.

(2) Irregular Specific Point Air Services—operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft from a designated base, serving a defined area or a specific point or points, at a toll per unit.

(3) Charter Air Services—operated by air carriers who offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Air Transport Board.

(4) Contract Air Services—operated by air carriers who do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.

(5) Flying Clubs—operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.

(6) Specialty Services—operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial pest control, aerial advertising, aerial patrol and inspection, etc.

Current operations of the two major airlines forming the nucleus of Canada's freight and passenger air service are outlined below.

Trans-Canada Air Lines.—During 1960, TCA flew 2,050,600,000 passenger-miles, passing the two billion passenger-mile mark for the first time in its 24-year history, and carried 3,440,303 passengers. Ton-miles of revenue commodity traffic, including excess baggage and express, totalled 20,868,000, and ton-miles of mail traffic totalled 11,593,000.

During the year the company introduced giant 127-passenger, 550-mile-an-hour DC-8 jets on transcontinental routes, linking Vancouver, Winnipeg, Toronto and Montreal, and on transatlantic routes to London and Prestwick. The Air Lines provided more than 725 round-trip seats daily across the Continent during the summer months, and more than 1,500 round-trip seats weekly across the North Atlantic to the United Kingdom and Continental Europe. At the year's end, TCA was serving 39 Canadian cities, six centres in the United States, three in the United Kingdom, France, Germany, Belgium, Switzerland and Austria in Continental Europe, Bermuda and the islands of the Caribbean—over 31,000 miles of air routes. Early in 1961, TCA began flying DC-8 jets only to all cities served in Europe.

TCA's fleet at the end of 1960 consisted of seven DC-8's, 49 Viscounts, 12 Super Constellations, 21 North Stars, seven DC-3's and two Vanguards, the first of which was delivered on Dec. 7. Four more DC-8's and 21 Vanguards have been ordered for delivery in 1961 and 1962. By late 1961, TCA expects to possess the world's first all-turbine-powered intercontinental air fleet, flying DC-8's, Vanguards and Viscounts exclusively.

Canadian Pacific Air Lines Limited.—Canadian Pacific Air Lines operates a 44,500-mile route pattern linking five continents as well as major cities in Canada. This pattern comprises 6,900 domestic route miles, including 2,450 miles on Canadian mainline service.

In 1960, CPA carried 350,991 passengers—a greater number than in any other year since the company's inception in 1942. The increase in passenger load, on both domestic and international routes, amounted to 15.6 p.c. over 1959. As a result of this increase in number of passengers carried, the occupied-seat-miles performed by the Air Lines during 1960 showed a corresponding advance to 544,132,000—an 18.9-p.c. increase over 1959.

CPA's international routes, 37,600 miles in extent, operate from Vancouver to Honolulu, Fiji, New Zealand and Australia on the South Pacific Service; to Japan and Hong Kong via the Great Circle Route across the North Pacific; from Vancouver and Edmonton to Amsterdam via the Polar Route; and across the Atlantic from Montreal to Portugal, Spain and Italy. A South American network serves Mexico City, Lima, Santiago and Buenos Aires. Two services link Mexico City with Toronto and Vancouver. In Canada, CPA operates a mainline transcontinental service linking Vancouver, Winnipeg, Toronto and Montreal, and a network of north-south routes in the western provinces and Yukon Territory.

At the end of 1960, the Air Lines' fleet consisted of 26 aircraft, including eight Britannia jet-prop airliners. The fleet was augmented by four 159-passenger, 600-mile-an-hour DC-8 jetliners early in 1961, and an additional five were under option.

Independent Airlines.—In addition to the two major Canadian air carriers—Trans-Canada Air Lines and Canadian Pacific Air Lines Limited—there are four domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Maritime Central Airways Limited, Charlottetown, P.E.I.; Quebecair, Inc., Rimouski, Que.; TransAir Limited, Winnipeg, Man.; and Pacific Western Airlines Limited, Vancouver, B.C.

Licensed Canadian air carriers operating in Canada as at Mar. 31, 1960 held valid operating certificates covering 43 scheduled, 128 flying training, and 908 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation, act as feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising and aerial patrol.

Maritime Central Airways Limited.—Maritime Central Airways operates in the Atlantic Provinces, the Gulf of St. Lawrence and the Eastern Arctic, serving Charlottetown and Summerside in Prince Edward Island; Moncton in New Brunswick; New Glasgow and Halifax in Nova Scotia; Stephenville, Gander and St. John's in Newfoundland; Goose Bay and Saglek in Labrador; Frobisher in the Northwest Territories; the Magdalen Islands and the French Islands of St. Pierre–Miquelon in the Gulf of St. Lawrence.

The Airways fleet includes one Super Viscount 805, two DC-4's, four C-46's, four DC-3's and two Beechcraft. The company operates daily scheduled flights throughout the Atlantic Provinces and an extensive contract freight service between the Atlantic Provinces and the Canadian Eastern Arctic; the latter service accounts for a large part of the company's revenue.

Quebecair, Inc.—Quebecair, a privately owned commercial airline with headquarters at Rimouski, serves various points in the Province of Quebec including Montreal, Quebec, Rivière du Loup, Rimouski, Mont Joli, Matane, Sept Îles, Wabush, Schefferville, Gagnon, Baie Comeau and Forestville. No point served is more than five flying hours from Montreal.

The company began operations in 1946 under the name of Rimouski Aviation Syndicate and was incorporated under the name of Rimouski Airlines in 1947. At the beginning of 1954, the newly created Rimouski Airlines bought out Gulf Aviation and formed Quebecair. Since then, passenger service has multiplied six times, air mail carried fourteen times and freight carried sixteen times. The number of passengers flown in 1960 was 119,266 and the amount of freight carried totalled 3,952,987 lb.

The Quebecair fleet consists of five DC-3's, three F-27's, two C-540's and one C-46 cargo aircraft. While the well-known DC-3 is a piston-powered aircraft, both the F-27 and the C-540 have turbo-prop engines. The former accommodates 36 passengers and the latter 52 and both types are equipped with weather radar and pressurization systems.

Pacific Western Airlines Limited.—Pacific Western Airlines Limited, with head office at Vancouver International Airport, is one of the largest independent air carriers in Canada. Total route miles in the system is close to 7,200 and services operated include scheduled mainline, local regular unit toll and charter flights in Saskatchewan, Alberta, the Northwest Territories including the Arctic Islands, and British Columbia.

Regularly scheduled mainline services are operated by Pacific Western northbound from Edmonton to Peace River, McMurray, Uranium City, Fort Smith, Fort Resolution, Fort Vermilion, Hay River, Yellowknife, Fort Simpson, Wrigley, Norman Wells and Inuvik. Regular local services are flown from Inuvik to Aklavik; from Yellowknife to Cambridge Bay; and from Inuvik to Aklavik to Fort McPherson to Arctic Red River. Local services also originate from Norman Wells to Fort Good Hope, Fort Norman, Wrigley and Fort Simpson; from Yellowknife to Rocher River, Port Radium, Coppermine and Bathurst; and from Hay River to Providence.

On the prairies, daily mainline service is scheduled between Regina, Saskatoon, Prince Albert, North Battleford and Edmonton. On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River, Campbell River, Tofino and Port Hardy and local services are operated between Prince Rupert, Stewart, Ford's Cove, Anyox, Maple Bay and Alice Arm in northern B.C. In addition, charter services are operated out of Vancouver, Nelson, Kamloops, Prince George, Terrace and Prince Rupert; in the Northern Division from Edmonton, Peace River, Fort Smith, Hay River, Yellowknife, Inuvik and Cambridge Bay.

Aircraft operated by Pacific Western number 48 and range from DC-4's, Super 46's and DC-3's on mainline services, to Otters, Beavers and Cessnas on charter and freight flights. Revenue passengers carried in 1960 totalled 121,003 and freight and express carried amounted to 5,310,825 lb.

TransAir Limited.—TransAir Limited operates scheduled, charter and sportsmen's flights in Ontario, Manitoba and the Northwest Territories. Twenty-nine aircraft are in service from major bases at Winnipeg and Churchill and from other bases at Pickle Lake and Sioux Lookout in Ontario and Lac du Bonnet, Norway House, Flin Flon, Lynn Lake and Wabowden in Manitoba. Its scheduled DC-3 and DC-4 mainline passenger services over 2,852 unduplicated route-miles are between: Winnipeg, Dauphin, The Pas, Flin Flon, Lynn Lake and return; Winnipeg, The Pas, Churchill and return; Montreal, Ottawa, Winisk, Churchill and return; Winnipeg, Red Lake and return; Winnipeg, International Falls, (Minnesota) and return. TransAir also operates regular flights between Churchill and Rankin Inlet, Baker Lake and Coral Harbour in the Northwest Territories and from those bases to points adjacent to them. The company's head office is at Winnipeg International Airport.

Commonwealth and Foreign Scheduled Commercial Air Services.—At the end of 1960 there were 18 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences covering international scheduled commercial air services operating into Canada, as follows:—

Air France (Compagnie Nationale Air France) operates between Paris and other points in Metropolitan France, Montreal Canada, Chicago U.S.A., and points beyond.

Alitalia Airlines operates between Rome Italy, Milan Italy, and Montreal Canada.

American Airlines, Inc. operates between Toronto Canada, and New York/Newark, via Buffalo, U.S.A.

British Overseas Airways Corp. operates between London England, Manchester England, Prestwick Scotland, Shannon Ireland, Gander Canada, Montreal Canada, and Toronto Canada; and between London England, Montreal Canada, and Bermuda, the Bahamas and Jamaica.

Eastern Air Lines, Inc. operates between the terminals Ottawa Canada and Montreal Canada, and New York U.S.A., direct or via Burlington Vt., U.S.A.; and between the terminals Ottawa Canada and Montreal Canada, and Washington U.S.A., direct or via Massena and/or Syracuse, N.Y., U.S.A.

K.L.M. Royal Dutch Airlines operates between Amsterdam the Netherlands, and Montreal Canada.

Lufthansa German Airlines operates between Hamburg Germany and other points abroad, Montreal Canada and Chicago U.S.A.

North Central Airlines, Inc. operates between Duluth, Minn./Superior, Wis., Hancock/Houghton, Mich., U.S.A., and Port Arthur/Fort William Canada.

Northeast Airlines, Inc. operates between Montreal Canada, and Boston U.S.A., via Burlington, Vt., Montpelier-Barre, Vt., White River Junction, Vt. (Lebanon Airport, N.H.), and Concord, N.H., U.S.A.

Northwest Airlines, Inc. operates between Winnipeg Canada, and Fargo, N.D., U.S.A.; and between Minneapolis/St. Paul U.S.A., Edmonton Canada, Anchorage Alaska, and beyond.

Pan American World Airways Inc. operates between Seattle, Wash., and Fairbanks, Alaska, U.S.A. with points of call at Juneau and Annette Island, Alaska, and Whitehorse, Y.T., Canada; and between points in the United States, Gander Canada, and Europe.

Qantas Empire Airways Ltd. operates between Sydney Australia, San Francisco U.S.A.; and Vancouver Canada.

Sabena Belgian World Airlines operates between Brussels Belgium, Shannon Ireland, and Montreal Canada.

Seaboard and Western Airlines, Inc. operates between points in the United States, Gander Canada, and beyond.

TWA (Trans-World Airlines, Inc.) operates between points in the United States, Gander Canada, and points abroad.

United Air Lines, Inc. operates between Vancouver Canada, and Seattle U.S.A., via Bellingham U.S.A.

West Coast Airlines, Inc. operates between Spokane U.S.A., and Calgary Canada.

Western Air Lines, Inc. operates between Great Falls, Mont., U.S.A., Calgary Canada and Edmonton Canada.

Section 3.—Civil Aviation Statistics

Ground Facilities.*—Aircraft landing areas in Canada are classified in Table **3** by administrative agency, as licensed or unlicensed land facilities or seaplane bases, and military air fields. The unlicensed aerodromes and seaplane bases shown are kept in varying degrees of readiness but lack one or more of the facilities usually found in licensed airports, such as lights, customs offices, passenger accommodation, ground/air communication, etc. Associated with these facilities is a network of radio aids to navigation designed to facilitate en route navigation and safe landings under low visibility conditions.

The Department of Transport operates 97 low frequency radio ranges, 36 VHF omni-directional ranges, 108 non-directional radio beacons and 36 instrument landing systems. These facilities are calibrated and flight-checked by Civil Aviation Inspectors on a regular schedule. Ten additional VHF omni-directional ranges are under construction.

---

* Compiled from information provided by the Civil Aviation Branch, Air Services, Department of Transport, Ottawa.

Air Traffic Control.—The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled air space, and between aircraft and obstructions on the movement area of controlled airports. This is accomplished through airport control, terminal control and area control services, together with flight information, alerting for search and rescue, customs notification and aircraft identification. These services are described below.

Airport Control is designed particularly to provide air traffic control service in the vicinity of major civil airports where the volume and type of aircraft operations, weather conditions and other factors indicate its need in the interests of safety. The service includes the control of pedestrians and vehicles on the manoeuvring area of the airport. Control is effected by means of direct radiotelephone communication or visual signals to aircraft and surface vehicles on and in the vicinity of controlled airports. The control towers are located at Whitehorse, Y.T., Victoria (International), Port Hardy and Vancouver, B.C.; Lethbridge, Calgary, Edmonton (Municipal) and Edmonton (International), Alta.; Saskatoon and Regina, Sask.; Winnipeg (International), Man.; Lakehead, Windsor, London, Toronto Island, Toronto (International), Ottawa and North Bay, Ont.; Montreal (International), Cartierville, Quebec, Val d'Or, Baie Comeau and Sept Îles, Que.; Moncton, Fredericton and Saint John, N.B.; Halifax (International) and Sydney, N.S.; Gander, Nfld.; and Frobisher, N.W.T. Most of the control towers are in continuous operation but a few provide 16-hour daily service only.

Terminal Control service consists of the provision of standard IFR separation to aircraft operating in accordance with Instrument Flight Rules within the local terminal control area, (which is generally within a 30-mile to 40-mile radius of the airport). Such service is provided by approach control units at Vancouver, B.C.; Edmonton and Calgary, Alta.; Saskatoon and Regina, Sask.; Winnipeg, Man.; the Lakehead, Toronto, Ottawa and North Bay, Ont.; Quebec and Montreal, Que.; Halifax (International), N.S.; Gander, Nfld.; and Frobisher, N.W.T.

Area Control is designed particularly to provide air traffic control service to aircraft operating within controlled airspace during weather conditions which prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Control centres are located at Vancouver, B.C.; Edmonton, Alta.; Winnipeg, Man.; Toronto, Ont.; Montreal, Que.; Moncton, N.B.; and Goose Bay and Gander, Nfld. Each centre is connected with the control towers, radio range stations and operations offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through the radio communication facilities available at these offices to all aircraft requiring area control service. Each area control centre is similarly connected with the adjacent centres, including centres in the United States, for the purpose of co-ordinating the control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of the movements of all aircraft operating in accordance with the Instrument Flight Rules, and a general record of the movements of all aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within the controlled airspace over Newfoundland, the Goose Bay and Gander control centres provide this service within the airspace over approximately one-half of the North Atlantic Ocean. The Vancouver area control centre also provides control service over the Pacific Ocean within the Vancouver Oceanic Control Area. Area control service is provided for approximately 16,000 miles of airways and control channels.

Radar Service aids in the control of both terminal and en route IFR traffic at certain locations. Radar terminal service is provided by the following terminal control units: Vancouver, B.C.; Calgary, Alta.; Saskatoon, Sask.; Regina, Sask.; Winnipeg (International), Man.; Toronto (International) and Ottawa, Ont.; Quebec and Montreal (International), Que.; Moncton, N.B.; Halifax (International), N.S.; Gander, Nfld. En route radar control service is being provided by the Winnipeg, Montreal, Gander and Goose area control centres.

Flight Information provides advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities and other related data of assistance to the pilot in planning or conducting a flight. Such service is provided by all air traffic control units but particularly by the eight area control centres.

Alerting for Search and Rescue is designed to ensure that the appropriate organizations are notified of aircraft in need of search and rescue aid and otherwise to assist such organizations promptly of non-arrival at destination of any aircraft for which a flight plan or flight notification has been received. This requires the maintenance and constant supervision of a continuous record of active flights to ensure that non-arrival of any aircraft is detected immediately. The service is available to any pilot who files either a flight plan or a flight notification with any communications agency of the Air Services of the Department or directly with one of the area control centres or control towers.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada–United States boundary. The Air Traffic Control communications system and units concerned therewith forward pilot requests to notify the customs officer at the airport of destination.

Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

The number of controlled operations in Canada during 1960 was 2,823,470.

Operation Statistics.—The statistics given in Table 4 show the volume of passenger, freight and mail traffic.

4.—Summary Statistics of Civil Aviation, 1956-59

NOTE.—Figures include operations of Canadian international carriers and Canadian operations of foreign carriers.

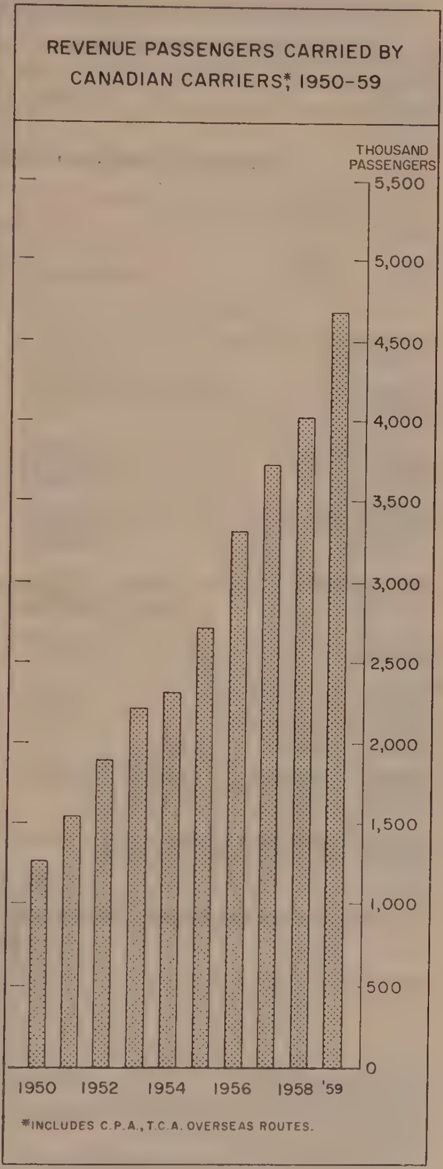
REVENUE MILES FLOWN BY CANADIAN CARRIERS* 1950-59

*INCLUDES C.P.A., T.C.A. OVERSEAS ROUTES.



REVENUE PASSENGERS CARRIED BY CANADIAN CARRIERS* 1950-59

*INCLUDES C.P.A., T.C.A. OVERSEAS ROUTES.

Table **5** shows civil aviation figures for 1959 by type of service. A definition of scheduled and non-scheduled carriers is given on p. 836. Statistics for international carriers include traffic over Canadian territory for both Canadian and foreign operators; a small amount of traffic across Canadian territory and between foreign stations is also included.

It is interesting to note that of the total revenue passengers carried in 1959, 58 p.c. travelled on scheduled domestic flights of Canadian carriers and 20 p.c. on international flights of Canadian carriers. On the other hand, 63 p.c. of the revenue freight carried during the year was transported by non-scheduled Canadian carriers.

5.—Summary Statistics of Civil Aviation, by Type of Service, 1959

[1] Includes Canadian trans-border, transatlantic and transpacific services.

Employees and Salaries and Wages.—The numbers of civil air personnel licensed in recent years are shown in Table **4**, p. 842. However, the figures in Table **9** include pilots and engineers in the employ of the Federal Government and of private individuals as well as those not employed at all in the ordinary sense.

[1] Excludes employees of foreign carriers domiciled in Canada.

PART VI.—OIL AND GAS PIPELINES

A special article covering the history and development of pipeline construction in Canada appears in the 1954 Year Book at pp. 861-869. Additional information has been carried in each succeeding edition and the following Section brings pipeline development up to the end of 1960.

Section 1.—Pipeline Developments*

Oil Pipelines.—The rapid development of Canadian oil fields in the past dozen years has necessitated a corresponding growth of crude oil pipeline systems to gather the oil and transport it to market areas. Although there were small-diameter oil pipelines in Ontario in 1875 and in Alberta by 1925, almost the entire present pipeline system has been constructed since the discovery of oil at Leduc, Alta., in 1947.

---

* Prepared under direction of Dr. Marc Boyer, Deputy Minister of Mines and Technical Surveys, in the Mineral Resources Division.

The oil pipeline network consists of two major components—the trunk line system of Interprovincial Pipe Line Company which delivers oil to Eastern Canada, and the trunk line system of Trans Mountain Oil Pipe Line Company which transports oil to the Pacific Coast. Numerous gathering systems and smaller trunk lines operate in Western Canada, transporting crude oil from oil fields to local refining centres and to the two major trunk line systems. Altogether there are more than 8,000 miles of trunk and gathering oil pipelines in Canada, as well as extensions to Canadian facilities in the United States which are used exclusively for carrying Canadian crude oil.

In 1960 there were no new oil pipeline construction projects undertaken in Canada but a number of additions were made to existing systems. In Alberta, Federated Pipe Lines Limited added 78 miles of loop to its line from the Swan Hills field to Edmonton and extended its system 32 miles in the Judy Creek and Virginia Hills fields. Pembina Pipeline Limited added 70 miles to its gathering system in the Pembina field. The new Simonette field was connected to the Peace River pipeline by 37 miles of eight-inch pipe. Northeastern British Columbia obtained its first oil pipeline when 30 miles of gathering line and a main line to the refinery near Fort St. John were built by Trans-Prairie Pipelines Limited. The line was also extended to Dawson Creek, B.C., to supply the small refinery there. At the end of 1960, plans were under way to provide a pipeline outlet to the Pacific Coast for northeastern British Columbia crude oil. In Saskatchewan, Producers Pipelines Limited added over 65 miles of extension to its gathering facilities in the southeastern part of the province.

As a result of negotiations between Canada and the United States, more than 570 miles of pipeline in the Yukon Territory, together with extensive storage facilities at Whitehorse, were purchased by Canada in March 1960. These lines were originally part of the Canol system constructed by the United States during World War II to supply fuel for naval operations in the Pacific. Source of the oil was Norman Wells, N.W.T., but the main line through the Mackenzie Mountains was dismantled as uneconomic in 1947. Another part of the system—the Canadian portion of the line between Whitehorse and Skagway on the Alaskan coast—was transferred to Canada in 1958. The remainder, consisting of petroleum products lines running along the Alaska Highway between the Alaska boundary and Whitehorse and between Carcross and Watson Lake, has now been transferred to Canadian ownership.

Interprovincial Pipeline.—Canada's longest oil pipeline, the system of Interprovincial Pipe Line Company, extends from the Redwater field, 25 miles northeast of Edmonton, to Port Credit near Toronto. This includes the line of its wholly owned subsidiary in the United States, the Lakehead Pipe Line Company Incorporated. The length of the route from the Redwater field to Port Credit is 1,934 miles. The system consists of two parallel lines from Edmonton to Superior, Wis., at the head of Lake Superior; a 30-inch line from Superior to Sarnia; and a 20-inch line from Sarnia to Port Credit. The capacity of the system is approximately 325,000 bbl. per day out of Edmonton, 428,000 bbl. per day out of Cromer, Man., and 333,500 bbl. per day out of Superior. Interprovincial takes deliveries from 12 pipeline companies in Alberta, Saskatchewan and Manitoba and serves 13 refineries in Canada and seven in the United States.

Trans Mountain Pipeline.—The Trans Mountain pipeline of 24-inch pipe was completed over a 719-mile route from Edmonton to Vancouver in 1953, enabling West Coast refineries to use Alberta crude oil in place of foreign crude brought in by tanker. Crude oil is transported to refineries at Ferndale and Anacortes in the State of Washington through extensions added to the Trans Mountain line in 1954 and 1955. The pumping capacity of the line is now 250,000 bbl. per day but for the past three years considerably less than half of this capacity has been utilized. Peak annual throughput was attained in 1957 when deliveries averaged 155,000 bbl. per day as a result of increased oil demand during the Suez crisis. In addition to taking deliveries at Edmonton, Trans Mountain receives crude at Edson, Alta., from the Peace River pipeline which serves the Sturgeon Lake, Kaybob and Simonette areas.

Other Pipelines.—The Federated pipeline connects the relatively new Swan Hills field with Edmonton. Deliveries were started in January 1959 and expansion of the system continued during 1960. The main line, of 10- and 12-inch pipe, is 123 miles long and, in addition, about 100 miles of lateral and gathering lines serve the Judy Creek, Judy Creek West and Virginia Hills fields. The Pembina pipeline system connects the large Pembina field to delivery points at Edmonton. The Britamoil Pipe Line Company operates a pipeline that originates 140 miles south of Edmonton in the Drumheller area and gathers crude from a number of fields en route to Edmonton. The Edmonton Pipe Line Company transports crude from the Camrose and Joarcam fields 40 miles south of Edmonton. The Imperial Pipe Line Company serves the Leduc–Woodbend, Acheson, Golden Spike and Redwater fields in the Edmonton area. The Rangeland Pipe Line Company gathers oil from the Sundre and Innisfail areas 60 miles north of Calgary. Texaco Exploration Company operates a pipeline that serves several fields southwest of Edmonton. In Saskatchewan, Producers Pipelines Limited and Westspur Pipe Line Company gather crude from most of the fields in the southeastern part of the province and carry it to the Interprovincial pipeline at Cromer, Man. Trans-Prairie Pipelines Limited has one system that serves the Weyburn field in southeastern Saskatchewan and a second system that serves fields in southwestern Manitoba.

Pipeline Tariffs.—Interprovincial Pipe Line Company reduced its tariff rate on crude oil transported from Edmonton to Sarnia and Toronto by six cents a barrel in 1960. There was no change in Trans Mountain pipeline tariffs. Some examples of tariffs for the two major systems follow.

Route	*Transmission Distance*	*Tariff*
	miles	cts. per bbl.
Edmonton, Alta.; to—		
Regina, Sask.	438	20
Superior, Wis., U.S.A.	1,074	37
Sarnia, Ont.	1,743	50
Port Credit, Ont.	1,899	54
Vancouver, B.C.	718	40
Ferndale, Wash., U.S.A.	740	42

Natural Gas Pipelines.—Although no large gas pipelines were constructed in 1960, it was an important year for Canadian gas producers as the National Energy Board granted permission to Canadian pipeline companies to export slightly more than 1,000,000 Mcf. per day to the United States and the United States Federal Power Commission gave permission for the importation of most of this gas. This led, during the latter part of the year, to a renewal of pipeline construction activity. Natural gas deliveries to California are expected to start by 1962 through a new Alberta-to-California pipeline which will have an initial capacity of 400,000 Mcf. per day. Parts of this system were under construction by the end of 1960.

The National Energy Board in 1960 granted export permits to the following companies:—

Alberta and Southern Gas Company Limited: 458,750 Mcf. per day for export at Kingsgate, B.C.
Westcoast Transmission Company Limited: 152,000 Mcf. per day for export at Kingsgate, B.C.
Canadian-Montana Pipe Line Company: 36,000 Mcf. per day for export near Cardston, Alta.
Trans-Canada Pipe Lines Limited: 204,000 Mcf. per day at Emerson, Man.
Trans-Canada Pipe Lines Limited: 204,000 Mcf. per day of interruptible gas at Niagara Falls, Ont.

Gas pipeline construction in 1960 was highlighted by the completion in October of a 30-inch pipeline by Trans-Canada Pipe Lines Limited from its main line at Winnipeg to the United States border at Emerson, Man., a distance of 51 miles. By the end of the year, communities in the Great Lakes region of the United States were being served with Canadian gas. About 800 miles of new gas pipeline were added to existing systems throughout Canada in 1960, bringing the total length of gathering, transmission and distribution lines to about 31,200 miles.

Trans-Canada Pipeline and Connecting Pipelines.—Trans-Canada is North America's longest pipeline and is the only means of delivering Western Canada's natural gas to Ontario and Quebec. The total length of line, including the new branch to the United States–Manitoba border, is 2,340 miles. Unlike the corresponding west-to-east crude oil pipeline which runs south of the Great Lakes, the Trans-Canada gas pipeline remains wholly within Canadian territory. The main portion of the system was completed in October 1958. It is comprised of 34-inch pipe from the Alberta–Saskatchewan border to Winnipeg, 30-inch pipe from Winnipeg to Toronto, and 20-inch pipe from Toronto to Montreal. There are also two laterals in the Toronto–Niagara Falls area and a 12-inch lateral to Ottawa.

Westcoast Transmission Pipeline and Connecting Pipelines.—The Westcoast line transports gas to the Vancouver area from the Peace River region of northeastern British Columbia and northwestern Alberta. The main trunk consists of 650 miles of 30-inch pipe starting at Taylor, B.C. There are about 300 miles of gathering lines connecting the Fort St. John, Buick Creek West, Blueberry, Stoddart, Kiskatimaw and Pouce Coupe fields, all in British Columbia, to the terminal at Taylor. The Westcoast line delivers gas to Inland Natural Gas Company Limited and British Columbia Electric Company in central and southern British Columbia and to Pacific Northwest Pipeline Corporation in the United States. Inland serves the towns of Kamloops, Vernon, Kelowna, Penticton, Trail and Nelson. British Columbia Electric serves the greater Vancouver area.

Alberta Gas Trunk Line Company.—This Company's pipeline system gathers gas in Alberta and delivers it to the Trans-Canada pipeline at the Alberta–Saskatchewan border. It consists of about 800 miles of line ranging from 34-inch down to 4-inch. In 1960, 183 miles of line were laid to take gas from several fields including the Homeglen–Rimbey, Cessford and Gilby fields. The Alberta Gas Trunk system is also designed to supply Alberta's gas utilities at a high load factor.

Saskatchewan Power Corporation.—This Corporation delivers gas to all cities and towns in Saskatchewan and serves altogether more than 70 urban communities. Much of the Corporation's gas is gathered in the Coleville–Smiley, Milton–Hoosier, Success–Cantuar and Hatton fields in the western part of Saskatchewan and from the Steelman field in the southeast corner of the province. In 1960, over 200 miles of gas pipeline were added to the network.

Other Gas Pipelines.—In Manitoba, the Greater Winnipeg Gas Company, with about 350 miles of lines, distributes natural gas to the Winnipeg area. In Ontario, Union Gas Company of Canada Limited serves most of southwestern Ontario, including Windsor, London, Sarnia and Chatham; it gathers gas from most of the small fields of southwestern Ontario. Consumers Gas Limited distributes gas in the Toronto, Ottawa, Niagara Falls, Welland and Fort Erie regions. Northern Ontario Natural Gas Limited and Twin City Gas Company distribute gas to various communities in northwestern Ontario from Fort William eastward to Orillia, including Sudbury. In Quebec, gas is distributed by Quebec Natural Gas Limited in the Montreal area. All of these systems are supplied by the Trans-Canada pipeline which makes deliveries in Saskatchewan, Manitoba, Ontario and Quebec along its 2,340-mile route.

Section 2.—Pipeline Statistics

Oil Pipeline Statistics.*—There were 41 oil pipeline companies operating in Canada at the end of 1960. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

---

* Statistics of oil pipelines are given in greater detail in the DBS monthly report *Oil Pipe Line Transport* (Catalogue No. 55-001). Additional information on the interprovincial movement of oil by pipeline will be found in Chapter XIX, Part I, Section 5.

1.—Oil Delivered by Pipeline, 1956-60

Destination	1956	1957	1958	1959	1960

Gas Pipeline Transport Statistics. The gas pipeline transport industry became a significant factor in the Canadian economy in 1957, with the completion of the first of several extensive pipelines constructed to transport natural gas from the field or processing plant to distribution outlets. The first detailed statistics for the industry cover the year 1959. Companies included are those that obtain the bulk of their revenue from the sale of gas to distribution companies for resale; those that derive most of their revenue from the sale of gas to final consumers are not included.

During 1960, Canadian transmission lines increased their net deliveries of natural gas by 32.8 p.c. to a total of 291,161,190 Mcf. from 219,279,021 Mcf. in 1959. Deliveries to distribution systems increased 31.3 p.c. and deliveries to foreign transmission lines 35.2 p.c. Much of the latter took place in the months of October, November and December after Trans-Canada Pipe Lines Limited commenced delivery to the mid-western United States. Deliveries averaged 795,522 Mcf. per day in 1960 compared with 600,764 Mcf. in 1959. Trans-Canada Pipe Lines accounted for 44.0 p.c. of the deliveries and Westcoast Transmission Company Limited for 37.3 p.c.

Receipts of natural gas were mainly from domestic sources—only 1.8 p.c. was imported. Imports were down to 5,476,580 Mcf. from the 1959 total of 11,634,172 Mcf., while gas received from gathering systems increased to 295,859,139 Mcf. from 210,967,454 Mcf.

Operating revenues increased 41.9 p.c. to $98,083,659 in 1960 from $69,124,365 in 1959.

3.—Natural Gas Transmission, 1959 and 1960

Item	1959	1960
	Mcf.	Mcf.
Natural Gas Received into System—		
From own gathering system	79,533,174	101,355,513
From other gathering systems	131,434,280	194,503,626
From foreign transmission lines	11,634,172	5,476,580
Totals, Net Receipts	**222,601,626**	**301,335,719**
From Canadian transmission lines	80,518,000	148,887,225
From storage	10,186,728	12,646,150
From distribution systems	4,791,947	6,292,123
Totals, Gross Receipts	**318,098,301**	**469,161,217**
Natural Gas Delivered out of System—		
To distribution systems	136,001,965	178,573,842
To foreign transmission lines	83,175,601	112,480,760
To industrial consumers	99,971	105,378
To others	1,484	1,210
Totals, Net Deliveries	**219,279,021**	**291,161,190**
To Canadian transmission lines	80,518,000	148,887,225
To storage	10,812,260	16,850,422
Redelivered to distribution systems	3,190,280	6,274,357
Totals, Gross Deliveries	**313,799,561**	**463,173,194**

SECTION 3. THE PRESS	881

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph and radio services, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country—its size, its topography, its climate, its small population—which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been overcome is evidenced by the fact that today Canada possesses communication facilities and services second to none in the world.

Section 1.—Telecommunications*

During the past half-century, Canada has experienced tremendous economic expansion. Population growth and the advance to new industrial frontiers have been matched by an upward surge in national productivity and general standard of living. Continuing development of Canada is dependent on both individual pioneering and the co-operative efforts of many industries and the telecommunications industry is filling a vital role in this drama of growth.

Business and industry have expanded and ventured into isolated areas assisted and promoted by Canadian telecommunications industries which have anticipated the needs of the future with vast programs of development in virgin territories. Technological development has been particularly important to the extension of telecommunications in Canada. To meet the demands placed upon it, the industry has constantly introduced newer and better equipment, tools and methods of operation. In the growth of urban centres, the development of rural communities and the pioneering of new territory, Canadian telecommunications agencies have constantly sought to provide the highest quality of service for the greatest number of people. The major railways, the hundreds of co-operating telephone companies, the radio and television companies and federal communications organizations work together with a common purpose, building networks of telecommunications from coast to coast. They provide such familiar services as telephone, telegraph, teletype, radio and television, and many other related means of communication; in addition, mutual co-operation has allowed them to satisfy a variety of defence needs.

---

* Textual data in the introduction of this Section and in Subsection 2 were prepared by The Bell Telephone Company of Canada, Montreal. Statistical material of Subsection 2 and Subsection 3 was revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. Subsections 1 and 4 to 7 were revised in the Telecommunications and Electronics Branch of the Department of Transport, Ottawa.

Subsection 1.—Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Government are subject to the jurisdiction of the Board of Transport Commissioners in the matter of rates and practices under the provisions of the Railway Act (see pp. 776-777); other companies are responsible to provincial regulatory bodies. In addition, tolls charged to the public for radio communications service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Except for those matters covered by the Broadcasting Act, radio communications in Canada are regulated under the Radio Act and Regulations which include control of any equipment liable to cause interference to radio or television reception (see also p. 866) and also under the Canada Shipping Act and Ship Radio Regulations. In addition, all radio communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto and in accordance with such regional agreements as the Inter-American Telecommunications Convention and Inter-American Radio Agreement, and the North American Regional Broadcasting Agreement. (See also pp. 864-866.)

National radio broadcasting in Canada entered its present phase in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of the system and gave to the Minister of Transport the technical control of all broadcasting stations.

During 1958 the Government established a Board of Broadcast Governors and the Canadian Broadcasting Corporation Board of Governors was abolished. The Board of Broadcast Governors regulates the establishment and operation of networks of sound and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that the applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Department.

Subsection 2.—Telephones

Alexander Graham Bell first transmitted human speech through electrically energized equipment in March 1876, and in August of the same year a one-way call from Brantford to Paris in Ontario marked the first successful long-distance test of the new invention. Soon after the instrument was perfected, telephone exchanges sprang up in many Canadian communities, sometimes two competing companies in one place. As a result, in April 1880 The Bell Telephone Company of Canada was established by Act of Parliament and authorized as the official agent for telephone service in thirty-two cities and towns across the country. However, it came to be recognized that, in the existing state of the industry, one company could scarcely develop and organize service over so wide a territory and separate companies were set up in British Columbia. The Bell Telephone withdrew from the Maritime Provinces in the 1880's and installations in the Prairie Provinces were sold to the respective provincial governments in 1908-09. The seven major telephone systems that developed across Canada worked together to establish long-distance service on a national basis and in 1931 they founded the Trans-Canada Telephone System, which now has eight full members including both shareholder-owned companies and provincial government systems. They are as follows:—

The Avalon Telephone Company Limited (joined in 1957)
Maritime Telegraph and Telephone Company Limited
The New Brunswick Telephone Company Limited
The Bell Telephone Company of Canada (serving Ontario and Quebec)
Manitoba Telephone System
Saskatchewan Government Telephones
Alberta Government Telephones
British Columbia Telephone Company.

These eight systems, together with the Island Telephone Company (P.E.I.), Québec Téléphone (lower St. Lawrence), Ontario Northland Communications and the Okanagan Telephone Company, comprise the Telephone Association of Canada. This organization was established to ensure general co-operation in telephone matters.

As already mentioned, the steadily rising demand for local and long-distance service has called not only for general expansion of Canadian telephone systems but for the constant introduction of modern facilities and services. A number of Canadian companies have developed what is called "Extended Area Service" in many of the communities they serve. This plan eliminates long-distance charges between the larger centres and their suburbs, or between two or more places with close community of interest.

As part of the transmission facilities needed to carry the great volume of long-distance traffic as well as network television programs, the members of the Trans-Canada Telephone System collaborated to build a microwave radio relay network spanning Canada from coast to coast. The longest such network in the world, it was placed in operation on July 1, 1958. It is maintained jointly, each system member being responsible for the section falling in its operating territory. This network, ultimately capable of carrying 2,400 long-distance conversations and two television programs at the same time, is steadily being expanded toward the limit of its capacity. In addition, extensions to the original network have been made, bringing long-distance telephone service and television programs to many more remote areas.

For several years operators have been dialing many long-distance calls direct to the wanted telephone. The modern switching system that makes this possible also permits customer dialing of long-distance calls. Known as Direct Distance Dialing, customer dialing of long-distance calls has been in effect for some time in several Canadian communities and more centres are being added to the list each year. A long-range international plan, developed by the telephone companies of Canada and the United States, eventually will allow practically every telephone-user in North America to dial direct to almost any other telephone on the Continent. Direct dialing, an added convenience for telephone customers, will allow Canadian telephone companies to handle economically the ever-growing volume of long-distance calls.

This volume of long-distance calls will be augmented by a new machine-to-machine communications method which uses the direct distance dialing switching network. Machine-to-machine communication on a large scale has been made possible by the Data-Phone—a device which, when associated with a telephone and a business machine such as a teletype, transmits information over long distances—information supplied by the business machine is converted by the Data-Phone into tone-signals which are carried over the long-distance network to the distant Data-Phone which, in turn, converts the signals into information acceptable to the associated business machine. It is expected that, within the next ten years, the volume of machine-to-machine communications will equal that of regular long-distance calls.

New optional services being actively planned and engineered will provide even more expansion and flexibility in the long-distance field. One of these services will extend a customer's flat-rate calling area just as far as he wants in Canada and, eventually, just as far as he wants on the Continent. The charge for this service will be based upon the extent of and the number of telephones within the area chosen. Another new service will permit a customer to rent a band of frequencies over which he may transmit the mixture of services—voice, teletype and data—that best suits the needs of his business. The rate for such a band of frequencies will be lower than that for the same number of facilities rented individually.

All-Number Calling—a telephone numbering plan which uses seven figures instead of two letters and five figures—was put into operation in many communities in Canada and the United States during 1961. This system is being introduced gradually to eliminate the potential problem of a shortage of usable exchange prefixes. On a continent-wide basis it will almost double the total of such exchange prefixes and will provide for more accurate dialing.

The northward extension of industry in Canada has, of course, required the northward expansion of telephone communications. The British Columbia Telephone Company operates a radio chain from Vancouver up the coast to Kitimat. Uranium City in northern Saskatchewan, located in a vast area of muskeg and swamp, is provided with communications through a radio network out of Prince Albert, Sask. In Manitoba, the radio-telephone service reaches out to a large number of isolated settlements and bush camps and provides communications for aircraft and for boats plying Lake Winnipeg. Goose Bay in Labrador and the Schefferville area of the Quebec-Labrador boundary are now in immediate telephone contact with the remainder of the world through a radio relay network operated out of Quebec City through Sept Îles. A branch of this system, built in 1959, extends long-distance service to the new mining settlement of Gagnon, Que. In the same year, Bell Telephone opened its farthest-north exchange at Frobisher Bay on Baffin Island.

The summer of 1961 marked the further expansion of northern communications with the inauguration of radio-telephone service for that great northern area between the Quebec coast of Hudson Bay and the Atlantic coast of Labrador. Radio facilities linked directly with the long-distance system permit communication from within this vast sparsely populated area to virtually anywhere within the civilized world. Focal point of the radio network is a base station located near Alma, Que. It serves all settlements desiring service wherever they may be located throughout the thousands of square miles which comprise this immense region. As additional requirements arise, either in established or new communities, radio-telephone service will be provided.

Numerous flexible services are provided by Canadian telephone companies for business and industry. Special conference circuits can be quickly arranged, enabling widely scattered business interests to discuss their affairs without the inconvenience and expense of travel. Telephoto and facsimile services provide photographic copy direct from the originator. Radio installations link the traveller with the regular telephone network, providing mobile service for such users as highway departments, trucking and construction firms, fire and ambulance services and police departments. Oil pipeline companies also use the service as part of their communications arrangements to maintain contact between central offices, storage tanks, pumping stations and control units.

There is a significant demand for efficient service combined with attractive telephone instruments. New styles of compact colour telephone sets were welcomed into thousands of Canadian homes during 1961, adding to the already-popular line of standard colour models. Business customers have been quick to accept the products of telephone research such as the Call Director, a telephone offering a flexible combination of dial telephone and push-button or dial intercommunication. Another new service, called Centrex, was also introduced in 1961. Designed for large customers, this is a centralized system for private branch exchange service which permits outside calls to be dialed straight through to an extension without being relayed at the switchboard, and provides for locating all the necessary switching equipment in the telephone exchange central office.

Telephone Statistics.—There were 2,605 telephone systems operating in Canada in 1959 compared with 2,619 in 1958. The number of co-operative systems in rural districts increased from 2,184 to 2,195 but the number of shareholder-owned companies decreased from 318 to 304. The largest of the stock companies, The Bell Telephone Company of Canada operating throughout the greater part of Ontario and Quebec, served 61 p.c. of all the telephones in Canada, and the British Columbia Telephone Company, also shareholder-owned, served 9 p.c. of the total.

The number of telephones in use in Canada has risen by 86 p.c. during the ten-year period 1950-59. At Dec. 31, 1959, there were 5,439,023 telephones in service compared with 5,118,293 in 1958 and 2,917,092 in 1950. The number of residential telephones and the number of business telephones increased by 8 and 6 p.c., respectively, during 1959. Rural telephones were up 1 p.c. and pay telephones 4 p.c. By the end of the year, 85 p.c. of all telephones in Canada were dial-operated as compared with 82 p.c. in 1958. Pole-line milage and wire milage continue to increase year after year.

1.—Milages of Pole Line and Wire and Number of Telephones in Use, 1950-59

Note.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

[1] Ontario four-party telephones included under Rural Lines.

The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems. The number of completed calls on all systems in 1959 was estimated at 9,250,220,035, or an average of 1,701 calls per telephone and 530 calls per person. Despite the increase in extended area service which eliminates toll charges between adjacent communities, long-distance calls continue to increase in number.

3.—Local and Long-Distance Calls and Average Calls per Telephone and per Capita, 1950-59

NOTE.—Figures from 1928 will be found in the corresponding table of previous Year Books beginning with the 1939 edition.

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita[1]	Average Calls per Telephone		
					Local	Long-Distance	Total

[1] Full-time employees only. [2] Full-time and part-time. [3] Statistics of The Bell Telephone Company of Canada for both Quebec and Ontario are included under Quebec. [4] Excludes wages and employees for rural systems.

Subsection 3.—Telegraphs

At the end of 1960 nine telegraph and cable companies were in operation in Canada. These systems, composed of lines owned by the Federal Government and the chartered railway and telegraph companies, including the Canadian Overseas Telecommunications Corporation (see p. 862), increased their property and equipment to $267,379,018, more than 17 p.c. above that reported in 1959. A new record was set for operating revenues at $58,546,167, up 11 p.c. from the previous high of 1959, and net income also rose to a new high of $11,761,141, 40 p.c. above the 1959 figure. Fewer telegrams were sent, the lowest number since 1942, but cablegrams continued to increase, numbering 2,663,598 in 1960.

6.—Summary Statistics of Canadian Telegraphs, 1951-60

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Operating Revenues	Operating Expenses	Net Operating Revenue	Pole-Line Milage	Wire Milage	Employees[1]	Messages, Land[2]	Cablegrams and Marconigrams[3]	Money Transferred

[1] Excludes commission operators. [2] Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations. [3] Excludes relayed messages.

Subsection 4.—Overseas Telecommunication Services

The Canadian Overseas Telecommunication Corporation was established in 1950 to maintain and operate, in Canada and elsewhere, external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and any other place and between Newfoundland and any other part of Canada; to make use of all developments in cable and radio transmission and reception for external telecommunication services; and to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other parts of the Commonwealth.

In 1952 the Corporation commenced an expansion program of overseas services designed to meet future requirements and the following services have so far been established: direct radiotelegraph communications between Canada and France, Italy and Germany; direct radiotelegraph, radiotelephone, telex and picture transmission services with Australia, New Zealand and Japan from stations at Ladner and Cloverdale, B.C.

In 1956 the first transatlantic telephone cable, a joint project with the British Post Office, American Telephone and Telegraph Company and the Corporation, was brought into service. Apart from normal use of the system for public telephone and telegraph message traffic, capacity is available for private leased circuits. The Corporation introduced the International Telex service into Canada in 1956 and service with 50 countries is now available. The first transatlantic slow-scan television pictures were transmitted between Canada and the United Kingdom in 1959. Twenty-four telephone circuits have been provided and are now in use between the mainland and Newfoundland.

At present under construction is the Canada–United Kingdom 80-circuit telephone cable scheduled for completion in 1961. Jointly with the Great Northern Telegraph Company, the Corporation will provide a Canada–Greenland–Iceland 24-circuit telephone cable—primarily to meet the North Atlantic communication needs of international civil aviation—scheduled to come into operation in 1962. A four-party project (Canada, United Kingdom, Australia and New Zealand) will provide a Canada–New Zealand–Australia 80-circuit telephone cable. This section of the Commonwealth round-the-world telephone cable system is scheduled for completion early in 1964.

In addition to the overseas services operated by the Canadian Overseas Telecommunication Corporation, two cable companies operate submarine cables landing in Canada—the Commercial Cable Company and the Western Union Telegraph Company. These companies operate to stations in the United Kingdom, Ireland, the United States, the Azores and St. Pierre and Miquelon Islands. The number of cables operating between connected stations and the length of cables are given in the following table.

7.—Cable Landings in Canada, 1960

Company and Station	Cables	Nautical Miles
	No.	No.
Canadian Overseas Telecommunication Corporation—		
Halifax, N.S. via Azores to Porthcurno, England	1	3,078
Halifax, N.S. via Nfld. to Porthcurno, England	1	2,656

New Brunswick Telephone Company Limited—		
Campobello Island, N.B. to Lubec, Me., U.S.A.	1	0.3

[1] Cable is licensed for operation by two carriers according to its two parts. [2] Cable is twin system from Clarenville, Nfld. to Oban, Scotland and single cable from Clarenville, Nfld. via Terranceville, Nfld. to Sydney Mines, N.S. [3] One cable unserviceable.

Subsection 5.—Federal Government Telegraph and Telephone Services and Meteorological Communications

Telegraph and Telephone Services.—The Telecommunications and Electronics Branch of the Department of Transport owns submarine cables for the provision of telephone service to certain islands off the Atlantic coast of Nova Scotia. Telegraph service is also provided at a few isolated places in Labrador. As of Mar. 31, 1961, these facilities consisted of 9.5 miles of submarine cable, and seven radiotelephone stations.

Meteorological Communications.—Weather stations operated by the Meteorological Branch of the Department of Transport throughout Canada are linked coast-to-coast by means of teletype and in the remote northern areas by radio or radioteletype. The landline teletype circuits are leased from commercial companies. The radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the federal Department of Transport.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial or radio facilities to the nearest station on the teletype line for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-to-coast systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax, Gander and Goose Bay. These main meteorological communications centres not only handle the distribution of weather information within Canada including the Arctic, but also effect international exchange with the United States and Europe and, through them, with many other countries. For the latter purpose, the Canadian Meteorological Branch and the British Meteorological Office share the cost of a leased duplex circuit in the transatlantic cable. Altogether, the Meteorological Branch uses 55,200 miles of teletype circuits connecting 327 teletype offices.

In addition, a facsimile network connects forecast offices including radio facsimile transmission to Arctic stations and ships at sea. Weather charts originating at the Central Analysis Office in Montreal receive national distribution over this network. Regional transmissions of additional charts are distributed on a local basis. Altogether, the Meteorological Branch utilizes 11,200 miles of facsimile circuits, serving 54 forecast offices.

Subsection 6.—Federal Government Radio Communication Services

Radio in Canada traces its origin to the year 1900 when wireless telegraphy was introduced and placed under the jurisdiction of the Department of Public Works. The first commercial radio circuit was established between Chateau Bay, Que., and Belle Isle in the Strait of Belle Isle in 1901, replacing an underwater cable which was difficult to maintain. In the first days of radio there did not appear to be any necessity for special legislative control, but the growth of this new medium of communication was very rapid and the Wireless Telegraph Act of 1905 became the first legislation in Canada controlling radio communication.

Radio regulation and radio coast station services were under the jurisdiction of the Department of Public Works until 1909, at which time they were transferred to the Department of Marine and Fisheries where they remained until 1930, with the exception of the period 1914-22 when they were under the jurisdiction of the Department of Naval Services. In 1930, when a separate Marine portfolio was established, they became a Branch of that Department and then in 1936 a Division of the Air Services Branch of the newly formed Department of Transport. In 1936 an aviation radio service was organized within the Radio Division, and to it in 1948 was transferred the Government Telegraph and Telephone Service, which had been under the jurisdiction of the Department of Public Works since 1879. In 1950, the name was changed to Telecommunications Division, and later to Telecommunications and Electronics Branch.

The radio activities of the Telecommunications and Electronics Branch may be summarized as follows: (1) the administration of national and international radio laws and regulations and of regional agreements, involving the issuance of radio licences, inspection of radio stations, certification of radio equipment, examination of operators, assignment and monitoring of frequencies, study of radio wave propagation, compilation and settling of international accounts for radio messages, investigation and suppression of inductive interference to radio reception; and (2) construction, maintenance and operation of radio communication stations and radio aids to marine and air navigation.

The national and international radio laws and regulations and the regional agreements administered by the Telecommunications and Electronics Branch include: (1) the Broadcasting Act; the Radio Act and Regulations made thereunder; the radio provisions of the Canada Shipping Act and Ship Station Radio Regulations; (2) the International Telecommunications Convention and Radio Regulations annexed thereto; the Articles of the International Civil Aviation Convention applicable to aeronautical radio requirements; that part of the International Convention for the Safety of Life at Sea applicable to radio requirements for ships; the Inter-American Telecommunication Convention; the Inter-American Radio Agreement; the North American Regional Broadcasting Agreement; the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and the Agreement between Canada and the United States of America for the promotion of safety on the Great Lakes by means of radio.

Licensing and Operation.—In all branches of radio, basic control is exercised over the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

Under the Broadcasting Act, the Board of Broadcast Governors regulates the establishment and operation of broadcasting networks, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Department. Reasonably complete and technically acceptable applications are therefore referred to the Board of Broadcast

Governors by the Department. Before such a licence may be issued, the approval of the Governor in Council is also required. With these exceptions, the technical control of broadcasting stations is carried out by the Telecommunications and Electronics Branch of the Department of Transport.

The standard broadcast band is crowded with stations that are capable of interfering with one another over the entire North American region, particularly at night. A plan for the accommodation of the largest number of stations with the least interference was evolved as a result of extensive studies conducted by Canada, Cuba, the Dominican Republic, Haiti, the Bahama Islands, Mexico and the United States and was embodied in the North American Regional Broadcasting Agreement.

Before a new standard broadcasting station can be licensed or before modifications can be made in an existing station, engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement. After the establishment or change is completed, proof of performance must be submitted to establish that the actual installation is in accordance with the approved plan.

Ten monitoring stations are maintained at suitable points across Canada to police and monitor the radio spectrum: to see that radio stations are complying with the procedure set forth for their particular service; to observe the emissions from stations and ensure that they comply with the rules applicable to their service; to detect non-licensed stations and ensure that stations are being used for the purpose for which they are licensed; to assist in the investigation of cases of inter-station interference; to make studies of spectrum occupancy with a view to finding spectrum space for new assignments; and to make precise frequency measurements to determine if the operating frequencies of all classes of radio stations are within the tolerances as prescribed by domestic and international regulations. A mobile monitoring station has been equipped to carry out the investigation of those technical and operational aspects of emissions on frequencies that cannot be monitored by stations in fixed locations.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention. Also, certain passenger, cargo, and other ships plying the Great Lakes are inspected to ensure compliance with the requirements of the agreement between Canada and the United States for the promotion of safety on the Great Lakes by means of radio.

Standards have been developed for the installation of aircraft radio stations specifying in detail the techniques and materials that may be used, to ensure that such stations will satisfactorily perform the function for which they are intended. Inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. In-flight inspections of the radio communications and navigational aspects of proposed new air carrier operations, encompassing both land and oceanic routes, are also made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations and the Radio Act provides that all operators, both commercial and amateur, must pass examinations to prove their ability to operate the respective classes of stations on which they are engaged. Competent operators are required on all classes of stations in order that the technical requirements prescribed under international agreement be adhered to closely; they are particularly essential on ship and aircraft stations in the interest of safety of life.

Investigation and Suppression of Inductive Interference.—Under the Radio Act the use of electrical equipment that will produce harmful interference to radio reception is not permitted. The Telecommunications and Electronics Branch of the Department of Transport maintains 75 cars equipped for measuring and locating sources of interference to broadcast, television and other radio reception. In addition to locating the sources of interference, advice is given as to how it may be suppressed or eliminated. These cars operate from permanent radio inspection offices located in 29 cities throughout Canada. During the year 1959, 25,188 sources of interference were located and suppression was obtained in all but a few cases. Power lines were the largest single source of interference, constituting 73 p.c. of the total Apart from cases of actual interference, the Branch also gives technical advice and assistance to manufacturers of electrical apparatus, in an effort to reduce the radio noise (interference) produced by such apparatus.

Recent amendments to the Radio Act prohibit the sale of electrical apparatus which will produce radio noise in excess of specified limits. Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order.

Another recent amendment to the Radio Act provides for exemption from the operation of the Act certain low-powered radio transmitting and receiving equipment which has been so Type Approved by the Department. Exemption approval has been granted to a number of models of garage door radio controls and other devices, which consequently may be operated without the radio station licence otherwise required.

Radio Revenue.—Regulations concerning the rendering and settlement of international ship-shore traffic accounts are contained in the International Telecommunication Convention and Regulations. Sources of revenue include commercial ship and inter-station messages handled by Departmental ship and land stations, radiotelegrams exchanged by foreign ships through Canadian coast stations, private commercial traffic *via* Departmental airway radio stations, and radio services rendered to aircraft of private airline companies by such stations. During the year ended Mar. 31, 1960, accounts with a gross value of $533,504 were handled with respect to chargeable traffic *via* Marine Radio Stations consisting of 135,254 ship-shore radiotelegrams, 43,915 point-to-point messages and 38,610 duplex radiotelephone conversations. For air-to-ground and message communication services provided by aeronautical stations, accounts were handled with a total value of $1,503,364.

8.—Radio Revenue Collected by the Department of Transport, Year Ended Mar. 31, 1960

Stations	Revenue	Stations	Revenue
	$		$
Marine Stations—		**Other Radio Revenue—**	
Private commercial messages and duplex radiophone calls	425,226	Examination fees—Radiotelegraph Operators' Certificate of Proficiency	5,486
		Licence fees	839,956
		Rentals	481,510
Aeronautical Stations—		Sales	126,173
		Miscellaneous	24,665
Air-to-ground and message communication services	891,481	**Totals**	**2,794,497**

Radio Aids to Marine and Aeronautical Navigation.—Services of the Telecommunications and Electronics Branch of the Department of Transport in aid of marine and aeronautical navigation are described in the following paragraphs. Details may be obtained on request from the Department of Transport, Ottawa.

Marine Navigation.—Radio aids to marine navigation are provided for about 4,000 radio-equipped Canadian vessels and almost as many foreign ships using Canadian waters. A safety and communications service for shipping is provided covering the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait.

Coast radio stations provide a safety watch and communications service for ships at sea and provide, as well, regularly broadcast weather reports, storm warnings and notices of dangers to navigation. Ships at sea may obtain medical advice from any coast station. The messages are delivered to the port medical officer of the Department of National Health and Welfare and replies are transmitted to the ship free of charge. The stations carry out communications by radiotelegraph and/or radiotelephone, and many of them provide connections to land telephone lines so that ships may communicate directly with any telephone subscriber. At Halifax (CFH) and Vancouver (CKN), shortwave facilities are furnished for world-wide communications. These stations participate in the Commonwealth long-range ship communication scheme. The coast stations on Hudson Bay and Hudson Strait, in addition to the regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions and direction finding bearings.

Coast radio direction finding stations, operated on Hudson Strait, enable ships to obtain a line of bearing from the station. No charge is made for this service. A chain of automatic *radiobeacon stations* is also maintained to provide a navigational aid to mariners by transmitting signals on which bearings may be taken by ships. These stations are arranged, where possible, in groups of three, transmitting on a common frequency but in proper time sequence so as to avoid interfering with one another. A navigator may thus obtain three bearings within three consecutive minutes and fix his location. For distance finding in foggy weather, a number of radiobeacons are synchronized with fog alarms at the same point. Ships may also request the transmission of signals from the coast stations for direction finding purposes.

Loran is a long-range radio aid to marine and air navigation which provides accurate fixes at distances up to 600 miles by day and 1,500 miles by night. Two Loran stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with Loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans.

Decca is a short-range radio aid to navigation which provides accurate fixes at distances up to 250 miles. Three chains of Decca stations are in operation—one in Nova Scotia and two in Newfoundland—and the relocated Quebec chain, to be known as the Anticosti Chain, is scheduled to go in operation in October 1961. These stations give service to ships off Newfoundland and Nova Scotia, and in the St. Lawrence River and Gulf.

Radar is a valuable aid to marine navigation and it has become general practice to equip merchant ships with this device. Important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation—one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour.

Lighthouses, particularly at locations where they would otherwise be completely cut off from summoning help in case of illness, are provided with low-powered transceivers for use in emergencies.

Aeronautical Navigation.—Radio aids to air navigation are provided from coast to coast and from the Canada–United States border to the Arctic along and off the airways, and are used by many Canadian and foreign air carriers flying over Canadian territory. Trained engineers and technicians are assigned to six regional offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., to carry out the construction and efficient operation of facilities.

The principal radio aid to air navigation provided by the Department of Transport is the low-frequency *radio range station*, located approximately every hundred miles along airways. It provides specific track guidance to pilots by means of audible signals and the signals may also be used for the purpose of obtaining direction finding bearings. In addition, radiotelephone communications are provided between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights.

Twenty-six very high frequency *omni-directional ranges* (VOR) are now in operation. Unlike the low-frequency radio range stations, this type of facility does not limit the aircraft using the station to one of four distinct courses but enables the pilot to select any desired course. The 26 omni-directional ranges have permitted the establishment of VOR airways across Canada and of 17 trans-border airways. Sixteen additional installations are under construction and should be in operation by the autumn of 1961. Preliminary work has begun on three others.

Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. *Fan markers*, operating on very high frequencies, are usually placed on an airway so as to inform the pilot when he may safely lose altitude after passing high terrain or to indicate accurately the distance from an airport. *Station location markers* are similar to fan markers except that the signal radiated is such that aircraft may receive the same indication irrespective of the direction of flight. They are installed at the same location as a radio range to enable a pilot to determine when he is exactly over the station, thus obtaining definite indication of position. Station location markers are installed at most radio range sites.

Airport and airway surveillance radars (150 nautical-mile) are in operation at 11 airports for air traffic control purposes. Four additional installations are completed, to be commissioned early in 1961. A 50-mile-range surveillance radar at Gander forms part of a complete ground-controlled approach facility. Another ground-control facility is in operation at Toronto International Airport.

Instrument landing systems provide radio signals which, when received by special radio equipment aboard aircraft, permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. The localizer and marker transmitters operate on very high frequencies, the glide path on ultra high frequencies and the compass locators on low and medium frequencies. Thirty-three instrument landing systems are in operation.

To assist in providing communication between aircraft and ground, *aeronautical radio communications stations* are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication with both domestic and international air carriers. The 13 international communications stations provide coverage from coast to coast as well as over the oceans and form a major contribution on the part of Canada to international aviation. Their functions may be grouped as follows: (1) communication for meteorological services; (2) communication for air traffic control services; and (3) communication for the benefit of airline operating agencies with their aircraft and between their despatch offices.

Subsection 7.—Other Government, Miscellaneous and Commercial Radio Communication Services

Radio services have been established by all provincial governments, mainly for police, highway and forestry protection purposes.

Municipal government departments have steadily increased their use of radio to facilitate operations particularly as a medium of communication with vehicles—police, fire, engineering, hydro, etc. In addition, the trend toward expansion in the employment of radio for urban mobile communication has shown no signs of abating. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical have participated extensively in the increase. This trend was accelerated during the latter part of 1960; relaxation in eligibility restrictions permitted the granting of radio station licences to a greater portion of the general public.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded considerably their use of radio in both urban mobile and point-to-point radio fields.

The member companies of the Telephone Association of Canada have established and are operating coast-to-coast microwave facilities to augment existing inter-city communication services and to provide television network service. This system has a number of trans-border (Canada–United States) inter-connections and is being continually modified and extended to provide better service. The railway companies also operate a number of large microwave radio systems to facilitate their inter-city communication services.

The Telephone Association members, independent telephone companies and the railways are increasingly extending communication service, by means of radio, to northern areas where such service was previously unavailable.

In addition, the telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Service of a similar nature is also provided by radio to land stations of subscribers in areas not served by normal wire telephone facilities. Restricted common-carrier mobile radio service (this service to vehicles does not permit inter-connection with the over-all telephone system but only with specific despatchers) is now available in most major cities in Canada as well as in a number of areas of lesser population. The latter service is provided by telephone companies as well as other common-carrier organizations.

Subsection 8.—Radio and Television Broadcasting*

Broadcasting in Canada has developed over a period of some 40 years as a combination of public and private enterprise. Since the opening program from Canada's first radio station was beamed into a few Montreal homes in 1918, the role of the radio and television program in the daily life of the Canadian family has grown to startling prominence. Today, radio service reaches 98 p.c. of Canada's homes and its programs are listened to for an average of two hours and 20 minutes a day. Television reaches over 88 p.c. of the homes and is watched for an average period of four hours and 45 minutes each day.

To have become such an integral force in the daily life of the nation, broadcasting had to learn the needs of the people and how to serve them. Two official languages forming two distinct cultures had to be served independently but without diminishing the concept of national unity. Dozens of other smaller groups, distinct in culture and frequently dwelling in the same radio or TV coverage area but in separate communities with widely divergent program interests had to be served. Physical problems of distance and geography had to be overcome. It requires some 320 radio transmitters and 80 TV stations and satellites to reach a population distributed across a 4,000-mile southern frontier, through seven time zones and a variety of topographical and climatic regions, and scattered northwest through thousands of square miles to the shores of the Arctic Ocean. Not only do these people have local service that is a reflection of life in their own districts, but by means of 15,000 miles of land lines for radio networks and 8,500 miles of microwave circuits for television nearly every Canadian may, at the same time, listen or watch as an event of national interest takes place.

---

* With the exception of the paragraphs relating to the establishment and functions of the Board of Broadcast Governors and the material on privately owned stations (pp. 877-878) prepared by the Secretary of the Board, the material in this Subsection was supplied by the Information Services of the Canadian Broadcasting Corporation, Ottawa.

The cost of such service to each Canadian during 1960 was approximately 6.5 cents a day, amounting to a $443,000,000 broadcasting industry for Canada. Some $240,000,000 of this was spent to purchase, maintain and operate receiving sets; the remainder was the cost of station and network operation.

Since 1932, a publicly owned body, now known as the Canadian Broadcasting Corporation, created to develop a national service, has worked with the private or independent station-owner to establish this service. A more recent addition is the Board of Broadcast Governors. Each of these—the private station-owner, the CBC and the BBG—is playing a responsible part in the present efforts to refine and develop broadcasting service in Canada.

The Broadcasting Act, proclaimed in November 1958, established the Board of Broadcast Governors to consist of three full-time members including the Chairman and Vice-Chairman and 12 part-time members. Sect. 10 of this Act provides that the Board of Broadcast Governors shall "for the purpose of ensuring the continued existence and efficient operation of a national broadcasting system and the provision of a varied and comprehensive broadcasting service of a high standard that is basically Canadian in content and character, to regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them, and provide for the final determination of all matters and questions in relation thereto".

The Broadcasting Act also requires that, before dealing with any application for a licence to establish a broadcasting station or for an increase in power, change of frequency or change of location of a broadcasting station, the Minister of Transport must receive a recommendation from the Board of Broadcast Governors. The same requirement exists with respect to the making of a new regulation or effecting changes in the regulations under the Radio Act. Before making the appropriate recommendation to the Minister of Transport, the Board considers all such applications at a public hearing at which the applicant, licensees and the Canadian Broadcasting Corporation have been given the opportunity of being heard.

Under the provisions of the Radio Act, the Minister of Transport must also receive a recommendation from the Board before dealing with any application to change the ownership or control of any share of capital stock in the licensee of a broadcasting station which is incorporated as a private company. The Board of Broadcast Governors has established a policy that any such application, which would result in a change of ownership or control of a licensee, would be referred to a public hearing before a recommendation is made to the Minister. Applications of this kind not involving a change of ownership or control may be dealt with by the Board or the Executive Committee of the Board at a regular meeting.

Under the provisions of the Broadcasting Act, the Board has issued the Radio Broadcasting Stations Regulations and the Radio (TV) Broadcasting Regulations, these regulations applying to radio and television stations respectively, covering all aspects of station operation and the enforcement of them as the responsibility of the Board.

Since its establishment in November of 1958, the Board has made 127 recommendations to the Minister of Transport on applications referred to it under Sect. 12 of the Act.

The Broadcasting Act also provides authority for the publicly owned Canadian Broadcasting Corporation, established "for the purpose of operating a national broadcasting service". The Corporation consists of a President and a Vice-President and nine other directors appointed by the Governor in Council. It is accountable to Parliament through a Cabinet Minister designated by the Governor in Council and is empowered to establish and maintain program networks and stations.

As of May 1, 1961, there were 38 CBC radio stations and 14 CBC television stations; 201 privately owned radio stations and 46 privately owned television stations. All but eight of the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over five networks operated by the CBC.

Radio Broadcasting Facilities.—The CBC operates three AM radio networks—the Trans-Canada and Dominion networks serving English-language audiences from the Atlantic to the Pacific, and the French-language network extending from Moncton, N.B., to Edmonton, Alta. As at May 1, 1961, the Trans-Canada network was made up of 26 basic stations—13 CBC-owned and 13 privately owned. There were 30 supplementary stations, four of which were CBC-owned Newfoundland stations and nine of which were stations of the CBC Northern and Armed Forces Service. The Dominion network consisted of 31 basic stations of which 30 were privately owned. Nineteen supplementary privately owned stations also received Dominion network service. The French network had five basic stations, four of which were CBC-owned and one privately owned, and 22 privately owned supplementary stations.

Table 9 lists the broadcasting stations of the CBC radio networks.

9.—Broadcasting Stations of CBC Radio Networks, as at May 1, 1961

NOTE.—The stations marked with an asterisk (*) are CBC-owned. The symbols used in the Power column have the following meanings: D, daytime; N, night; DA-1, one directional antenna both day and night; DA-2, two directional antennae, one in daylight, the other at night; DA-N, single directional antenna used at night only. Wattage of some stations differs between day and night as shown.

CBC Northern Radio Service.—Since November 1958 six radio stations in Northern Canada have been taken over by the CBC—at Whitehorse and Dawson in the Yukon Territory, at Yellowknife and Hay River in the Northwest Territories, at Goose Bay in Labrador and at Fort Churchill in northern Manitoba. Three others have been built at Fort Smith, Inuvik and Frobisher Bay in the Northwest Territories. Low-power relay transmitters were installed at Fort Nelson, B.C., and Watson Lake, Y.T.

Northern stations are able to pick up and relay news and topical programs from CBC transmitters at Lacombe, Alta., Watrous, Sask., and Sackville, N.B. Greater use of facilities at Sackville has resulted in the transmission of programs more extensively to the North.

Network features are provided for all stations on tapes recorded in Montreal and flown to the North on regular airline flights. The stations are staffed with local recruits wherever possible and the CBC Northern Service works closely with the educational service of the Department of Northern Affairs and National Resources.

CFFB	Frobisher Bay	1,200	40	Feb. 5, 1961

[1] Low-power relay transmitters.

FM Radio.—With the opening of the three-city CBC-FM network on Apr. 4, 1960, a new bilingual aspect entered Canadian network radio. The network is bilingual in the sense that each station in Toronto, Ottawa and Montreal announces the programs it originates in English or French, without translation into the other language. At the start of each day's programming, however, a program résumé is given in both English and French.

The schedule planners have placed emphasis on the best of the world's music, both popular and classical, live and recorded. CBC news, talks and commentaries in depth and great dramatic works in English and French are also presented.

For the first 18 months of its operation, the frequency modulation network is experimental in nature. The network broadcasts during the evening hours from 7 p.m. to midnight, Monday to Friday, and from noon to midnight on Saturday and Sunday. The network links three existing CBC stations—CBC-FM in Toronto, CBM-FM in Montreal, and CBO-FM in Ottawa.

11.—CBC-FM Stations

Call Letters	Frequency	Power	Location
	mc/s.	kw.	
FM Network—			
CBC-FM	99.1	11.90	Toronto, Ont.
CBM-FM	100.7	3.86	Montreal, Que.

French—			
CBF-FM	95.1	3.86	Montreal, Que.
Other—			
CBU-FM	105.7	1.40	Vancouver, B.C.

Television Broadcasting Facilities.—As of May 1, 1961, there were 67 television stations in Canada, plus 26 rebroadcasting and network repeater stations. There were 47 television stations in operation on the English network, nine of which were CBC-owned. On the French network, 12 stations were in operation, four of which were CBC-owned. The CBC and affiliated stations, plus supplementary stations and rebroadcasting and network repeater stations, were located and powered as shown in Table 12.

12.—Broadcasting Facilities of CBC Television Networks, as at May 1, 1961

NOTE.—A single asterisk denotes a rebroadcasting station; a double asterisk denotes a network repeater station.

---

[1] Based on stations' published data.

About 94 p.c. of Canada's population is covered by Canadian television stations. Microwave facilities linking television stations from coast to coast for instantaneous telecasting of programs went into full operation July 1, 1958. In June 1959 these facilities were extended from Sydney, N.S., to St. John's, Nfld., providing a direct visual link between all ten provinces. When television broadcasting began in September 1952, television sets in use in Canada totalled 146,000. One year later the number had tripled and by Jan. 1, 1961 it was estimated that programs of the CBC networks could be viewed in approximately 3,650,000 Canadian homes.

Canadian Broadcasting Corporation Facilities.—In accordance with the Broadcasting Act, the CBC's Head Office is in Ottawa from which over-all direction is provided for the two complete and distinct broadcasting services, one in English and the other in French. Headquarters and main production facilities for the French networks are in Montreal and for the English networks, in Toronto. A truly national program service is provided to the whole country on these networks by programs contributed from the CBC's nine operating divisions: British Columbia, the Prairie Provinces, Quebec, Ontario, Ottawa area, the Maritimes, Newfoundland, the Northern and Armed Forces Service and the International Service. Facilities for the production of radio programs have been developed in some 25 communities as far apart as Prince Rupert in British Columbia, Corner Brook in Newfoundland and Inuvik in the Northwest Territories. Television production facilities have been developed at nine of these 25 locations.

Domestic Radio Program Service.—During the year ended Mar. 31, 1960, about 1,500 programs representing 493 hours of broadcasting, were presented each week over the CBC's Trans-Canada, Dominion and French networks. Of the total broadcasting hours in 1959-60, 70 p.c. were released on the Trans-Canada network; the Dominion network released 6 p.c. and 24 p.c. were carried on the French network.

The CBC originated and produced 92 p.c. of its network broadcasts. Of the remainder, 2 p.c. came from the private stations, 3 p.c. were exchange programs from the United States, 2 p.c. from the United Kingdom, and 1 p.c. came from other countries. An analysis of network programs by categories for 1959-60 shows that a large proportion of CBC radio network time was devoted to music—an estimated 39 p.c.; 56 p.c. of programming was predominantly entertainment (music, drama, sports, etc.); 28 p.c. was predominantly information programs (news and weather, farm and fisheries, science, nature, etc.); and 16 p.c. was predominantly idea or opinion programs.

Domestic Television Program Service.—During the year ended Mar. 31, 1960, the CBC English-language television network presented 60 hours per week of programs. Of this, 64 p.c. was produced by CBC; 30 p.c. was drawn from sources in the United States; 2

p.c. from other Canadian sources; 2 p.c. from the United Kingdom; and 2 p.c. from other countries. Of the 67 hours presented each week on the French network, 72 p.c. originated with the CBC; 4 p.c. with other Canadian sources; 3 p.c. with sources in France; 12 p.c. in the United States; 4 p.c. in the United Kingdom; and 5 p.c. in other countries.

CBC International Service.—The International Service of the Canadian Broadcasting Corporation broadcasts news, news reports, commentaries, interviews, talks, accounts of special events, actualities, and other programs that tell people in other lands about life in Canada. The headquarters and studios are in the Radio-Canada Building in Montreal and the two 50-kw. shortwave transmitters and antenna arrays are in Sackville, N.B. The programs are transmitted directly by shortwave to listeners in 11 languages—English, French, German, Czech, Slovak, Russian, Ukrainian, Polish, Hungarian, Spanish and Portuguese. Shortwave service to Africa in English and French was inaugurated this year. A recorded program service is provided regularly to radio organizations in Austria, Finland and Greece. As required, all radio organizations throughout the world are provided with special relays and recorded programs.

The International Service also provides a Transcription Service to radio organizations in other countries. This consists of music and spoken-word recordings on long-playing discs. The music transcriptions feature the works of Canadian composers, performers, arrangers, conductors and orchestras. The spoken-word transcriptions, in the English, French and Spanish languages, include programs that deal with Canadian drama, history, biography, folklore, documentaries and literature.

In addition to their use for the regular programs of the International Service, the shortwave transmitters at Sackville are employed to provide programs for people living in Canada's Far North and for relay to the members of Canada's Armed Forces stationed abroad. On special occasions, the regular facilities of the International Service are supplemented by commercial radiotelephone facilities to provide simultaneous service to areas of the world beyond the range of the signal from Sackville.

More than 400,000 letters, cards and reception reports have been received from listeners since the official inauguration of the International Service on Feb. 25, 1945. Replies are sent in the language of the letter-writer and a great variety of printed and illustrated information on all aspects of life in Canada is provided. An illustrated Program Schedule is distributed periodically to some 200,000 listeners around the world.

In addition to its international shortwave service, the CBC maintains two domestic shortwave stations—CBNX at St. John's, Nfld., and CBUX at Vancouver, B.C.—for the purpose of extending coverage of the existing standard band stations CBN and CBU.

Canadian Broadcasting Corporation Finances.—Table **15** is a statement of CBC finances for the year ended Mar. 31, 1960. During that year the Corporation supplemented its income from the public treasury by $38,162,337 from commercial sales, reflecting a continuing increase in commercial revenue.

15.—Financial Statement of CBC Operations, Year Ended Mar. 31, 1960

Item	Amount
	$
Income—	
Commercial revenue (gross)	38,162,337
Interest on investments	109,199
Miscellaneous	292,404
Total, Income	**38,563,940**
Expenses—	
Cost of programs	57,890,301
Network distribution	9,141,504
Station transmission	3,010,832
Payments to private stations	5,333,470
Commission to agencies and networks	5,592,000
Northern radio service	490,860
Operational supervision and services	6,877,848
Program	*2,353,525*
Administrative	*2,726,415*
General	*1,797,908*
Selling and general administration	5,702,950
Selling expense	*1,232,043*
Engineering and development	*1,051,347*
Management and central services	*3,419,560*
Total, Expenses	**94,039,765**[1]
Excess of Expenses over Income	**55,475,825**
Recoverable by way of parliamentary grant in respect of the net operating requirements of the radio and television services	52,300,278
Depreciation	3,175,547
	55,475,825

---

[1] Included in the above expenses for 1960 are $50,375 for executive officers' remuneration, $34,900 for honoraria to directors and $36,961 for legal expenses.

Privately Owned Stations.—As already stated, privately owned broadcasting stations are subject to the Radio Act, the Canadian Broadcasting Act and Regulations made thereunder, and the provisions of the Radio Regulations annexed to the International Telecommunication Convention and Regional Agreements in effect in Canada. Since Mar. 31, 1923, private commercial broadcasting station licences have been required by government regulation and both sound and television broadcasting stations are now authorized by this class of licence.

Any application for a licence to establish a new private station or for an increase in power, change of channel, or change of location of any existing private station must be referred by the Minister of Transport to the Board of Broadcast Governors. The Broadcasting Act requires that the Board consider such applications at a public hearing and following the hearing the Board makes a recommendation to the Minister of Transport. The approval of the Governor in Council must be obtained before any licence for a new private station is issued. Private commercial broadcasting station licences are conditional upon the ownership or control of the stations, and none of the shares of capital stock of licensed private companies nor the control of licensed public companies may be changed without the permission of the Minister of Transport having been first obtained upon the recommendation of the Board of Broadcast Governors. The Board of Broadcast Governors has ruled that any change in share structure of a licensee involving a change of ownership or control of the licensee will be considered at a public hearing of the Board before a recommendation is made to the Minister. The Radio Broadcasting Stations Regulations require all broadcasting stations to present to the Board at the end of each week a program log for that week indicating the total programming carried by the station. Organizational and financial statements are filed annually, on a confidential basis, with the Department of Transport.

The first sound broadcasting in Canada took place when a privately owned communications company in Montreal was authorized to transmit programs on an experimental basis during the latter part of 1918 and in the winter evenings of 1919 over its Station XWA. Under the first licensing regulations in the year ended Mar. 31, 1923, 34 licences were issued. On Mar. 31, 1961, the number was 240, of which 204 were AM standard band stations, 30 were FM stations and six were shortwave stations.

A privately owned broadcasting station is required to pay to the Receiver General of Canada an annual licence fee based on the gross revenue for licence fee computation for the fiscal year of the station.

The first privately owned television broadcasting station in Canada located at Sudbury, Ont., was authorized to commence scheduled broadcasting on Oct. 20, 1953. By May 1, 1961, 78 privately owned television stations were in operation (see Table **12**).

Section 2.—The Post Office

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act to superintend and manage the postal service of Canada under the direction of a Postmaster General. For almost a century before Confederation, postal services in the Canadian provinces had been controlled by the British Postmaster General and administered by his deputies. Under the French régime a courier service had been organized as early as 1703 between Quebec, Trois Rivières and Montreal. In 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for the use of travellers. In 1851 the control of their post offices was assumed by the different provinces of British North America and at Confederation these systems merged to form the Canada Post Office.

Functions.—The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with security and dispatch. In discharging these duties it maintains post offices and utilizes air, railway, land and water transportation facilities. Associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting for COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its widespread facilities, it has been found expedient for the Post Office to assist other government departments in the performance of certain tasks including the sale of unemployment insurance stamps, the collection of government annuity payments, the distribution of income tax forms and Civil Service employment application forms, and the display of government posters.

Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all of the functions of the city office. In larger urban areas postal stations and sub-post offices have full functions similar to the main post office, including a general delivery service, lock-box delivery and letter-carrier delivery.

At Mar. 31, 1960, there were 11,497 post offices in operation compared with 11,634 in 1959. Letter-carrier delivery, performed in 157 urban centres, employed over 7,300 uniformed letter carriers. Postage paid in 1959-60 by means of postage stamps amounted to $83,961,344 as compared with $82,008,654 in 1959. Post office money orders, issued for any amount not exceeding $100 and payable in almost any country of the world, were sold at more than 8,400 post offices and money orders payable in Canada only, for amounts not exceeding $16, were sold at some 2,300 additional post offices. Post Office Savings Banks operate in all parts of the country and, on Mar. 31, 1960, had total deposits of $29,372,460.

Organization.—The Canada Post Office includes an Operating Service and Headquarters at Ottawa. The Operating Service is organized into four regions, each under a Regional Director who is the field representative of the Deputy Postmaster General. There are seven Headquarters Branches—Administration, Operations, Transportation, Comptroller's Branch, Engineering and Development, Financial, and Personnel—each under a Director. Operating and secretarial features in the operating field affecting the post offices and local mail services in urban centres are taken care of by the local postmaster. District office functions relating to services in the district and all inspections and investigations are under District Directors of Postal Services in strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly inhabited point of Canada) to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily and constitutes a great air artery from St. John's, Nfld., to Victoria, B.C., intersected by branch lines and connecting lines radiating to every quarter and linking up with the United States airmail system. Since July 1, 1948, all first-class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be expedited. On Apr. 1, 1954, this service was extended to first-class items up to and including eight ounces in weight. Air stage service provides the only means of communication for many areas in the hinterland. There were approximately 41,069 miles of airmail and air stage routes in Canada in 1960 as compared with 39,633 miles in 1959.

The principal means of mail transportation is the railway mail service that operates along 24,613 miles of track and, in 1960, covered more than 37,420,000 service-miles. A staff of 781 mail clerks prepared the mails for prompt delivery and dispatch while en route in the railway mail cars.

The rural mail delivery organization provided direct postal service over approximately 5,575 rural mail routes in 1960, extending over 139,000 route-miles and serving 506,231 rural mail boxes. Rural mail routes are generally circular in pattern and average about 25.2 miles in length. Considerable progress has been made toward the development of mail service by means of group boxes—a service intended for the more densely populated rural areas and for suburban residents not within the area of letter-carrier delivery service. About 2,500 side services were in operation in 1960 to transport mail between post offices, railway stations, steamer wharves and airports, and 2,007 stage services operated to convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is being developed and over 340 such services are in operation, many of them replacing or reducing conveyance by rail. A local exchange of mails between offices on the route is effected by way-mail wallet. In 1960 there were approximately 820 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. The 10,100 land-mail service couriers employed travelled approximately 50,600,000 miles during the year. Land-mail services are performed under a contract system, the contracts being awarded to the person submitting the lowest tender and competent to provide all the requisite equipment.

Coastal mail service is conducted by 33 contractors who operate as far north along the West Coast as Alaska and on the East Coast to the northern part of Labrador.

Mechanization.—The larger post offices in Canada may be described as intricate industrial plants where mail is unloaded, cancelled, transported and shipped by semiautomatic means. Conveyor belts, automatic chutes and other devices increase output of mail matter without increasing staff and all the larger offices now being constructed are provided with the latest mechanical equipment. Even the letter carrier has been mechanized in some areas—the use of the mailmobile (part motorcycle and part truck) has shown that even the traditional door-to-door method of delivering mail can be improved upon. In most cities, postage stamps may be obtained at any time from automatic vending machines which offer a variety of denominations in neat packages. This service has been followed by the development of a curbside mail receptacle (snorkel) in which patrons may deposit mail without leaving their automobiles. Electronic methods have been introduced for the checking of money orders and for accounting for the almost $1,000,000,000 annually that they represent. Money order forms have been redesigned to improve handling and reduce costs.

Post Office Statistics.—Tables 16 and 17 give the numbers of post offices in operation, together with revenue and expenditure for recent years.

16.—Post Offices in Operation, by Province, as at Mar. 31, 1956-60

Province or Territory	1956	1957	1958	1959	1960
	No.	No.	No.	No.	No.

The increase in postal business is one of the impressive features of Canada's economic development during the past ten years. Gross revenue for the year ended Mar. 31, 1960 reached an all-time high.

17.—Revenue and Expenditure of the Post Office Department, Years Ended Mar. 31, 1951-60

NOTE.—Figures from 1868 will be found in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Gross Revenue	Net Revenue[1]	Expenditure[2]	Surplus (+) or Deficit (−)
	$	$	$	$
1951	105,545,456	90,454,678	91,781,466	−1,326,788
1952	122,266,675	104,622,208	97,973,263	+6,648,945
1953	129,388,365	112,024,245	105,553,191	+6,471,054
1954	129,889,325	111,107,484	113,581,752	−2,474,268
1955	151,717,273	131,315,049	123,611,055	+7,703,994
1956	158,568,356	137,696,621	127,421,739	+10,274,882
1957	167,879,869	145,823,785	139,992,921	+5,830,864
1958	177,492,783	152,919,881	153,319,782	−399,901
1959	183,380,508	157,630,336	157,803,478	−173,142
1960	193,593,016	167,562,354	165,792,339	+1,770,015

---

[1] Gross revenue less commissions and allowances to postmasters, and other smaller items. [2] Excludes rental of semi-staff and staff post offices.

The gross revenue receipts shown in Table **17** are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during each of the latest five fiscal years was: $75,559,106 in 1955-56, $77,735,659 in 1956-57, $81,192,007 in 1957-58, $82,008,654 in 1958-59 and $83,961,344 in 1959-60. Receipts from postage meter or postage register impressions and postage paid in cash by other means were as follows: $70,696,501 in 1955-56, $78,041,479 in 1956-57, $83,706,744 in 1957-58, $87,920,080 in 1958-59 and $95,943,284 in 1959-60.

Auxiliary Postal Services.—Auxiliary postal services include the issuing of money orders and the operation of the Post Office Savings Bank.

Table **18** shows the amount of money order business conducted by the postal service in recent years. A table showing the financial business of the Post Office Savings Bank will be found in Chapter XXIII on Currency and Banking.

18.—Operations of the Money Order System, Years Ended Mar. 31, 1956-60

Year	Money Order Offices in Canada	Money Orders Issued in Canada	Value of Orders Issued in Canada	Value Payable in—		Value of Orders Issued in Other Countries, Payable in Canada
				Canada	Other Countries	
	No.	No.	$	$	$	$
1956	11,099	49,081,082	725,930,733	704,230,646	21,700,086	4,643,217
1957	11,022	51,182,296	799,615,004	772,708,244	26,906,761	5,033,806
1958	10,934	52,898,954	845,647,439	818,333,292	27,314,147	5,394,568
1959	10,823	53,746,050	853,443,891	825,973,053	27,470,837	5,026,970
1960	10,778	54,953,087	868,669,133	840,584,556	28,084,576	5,250,922

Section 3.—The Press

An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 to (circa) 1900. A second article appearing in the 1959 edition brings that account up to the date of writing (1958). The complete presentation is available in reprint form from the Dominion Bureau of Statistics.

Daily newspapers published in Canada numbered 110 in 1960, counting morning and evening editions separately. English and French dailies had an aggregate reported circulation of close to 4,000,000—about 82 p.c. in English and 18 p.c. in French. Twelve of these enjoying circulations in excess of 100,000 accounted for more than half of the circulation. French dailies, as would be expected, have their widest circulation in Quebec where 10 of the 12 in existence in 1960 were published. Some of the largest of these papers have been established in that province for over 60 years. Information regarding foreign-language publications is not available for 1960.

Weekly newspapers serve more people in rural communities than do the dailies. They cater to local interests and exercise an important influence in the areas they serve.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 100 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is, in effect, a partnership through which each member newspaper provides its fellow members with the news of its particular area and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada.

The British United Press is a limited company in Canada and maintains a close association with the United Press International, of which it is an affiliate. From its headquarters in Montreal and its 12 Canadian bureaus, it serves directly (1961) North America, South America, Europe and Australia with news from Canada, as well as 185 subscribers including 58 private broadcasting stations in Canada. Agence France Presse maintains offices in Montreal and Ottawa and certain foreign newspapers have agencies in Ottawa to interpret Canadian news for their readers.

Press Statistics.—The following tables are based on data estimated from *Canadian Advertising* and include English and French newspapers only. No information is available regarding foreign-language newspapers for 1960; numbers and circulations for 1958 and 1959 are given in the 1960 Year Book at p. 919 and figures back to 1945 in previous editions beginning with the 1947 edition.

One serious difficulty has been encountered in connection with the compilation of newspaper circulation figures. Reliable circulation figures are relatively easy to obtain for daily newspapers because, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements; for these, A.B.C. 'net paid' figures have been used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers and for magazines, and those shown in the following tables should be used with reservations.

19.—Estimated Numbers and Circulations[1] of reporting Daily and Weekly[2] English-Language Newspapers, by Province, 1958-60

NOTE.—Figures from 1945 will be found in the corresponding table of previous Year Books beginning with the 1947 edition.

- Section 4. Index Numbers of Security Prices 954

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including amusement services, such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The index will be found useful in this respect.

Section 1.—Merchandising and Service Establishments*

The next census of merchandising and service establishments will be for the year 1961. The first census of this kind in Canada related to business transacted for the year 1930 and similar censuses were taken for 1941 and 1951. It is worth noting now that the scope of the data being collected for 1961 has been widened. Gross margin information will be collected from retail stores and wholesalers. Operating expense figures will be collected from wholesalers and service businesses and more information will be sought about the operating characteristics of retailers and wholesalers.

The results of the 1930 and 1941 Censuses of Merchandising and Service Establishments are contained in Vols. X and XI of the Census reports for those years and the results of the 1951 Census of Distribution in Vols. VII and VIII of the 1951 Census reports. Summary data for 1951 are given in the 1955 Year Book, pp. 953-977. The results of the 1961 Census will be available about mid-1963.

Census information is supplemented in intercensal years by monthly, quarterly and annual surveys on the more important phases of the retail, wholesale and service trades—sample surveys for some businesses and full coverage for others. The 1951 Census formed a new base for such surveys and certain improvements have been implemented for continuance during the 1951-61 intercensal period. Current information available on the distributive trades is given in the following Subsections. Estimates for the years prior to 1951 have been revised in accordance with the census base.

Subsection 1.—Wholesale Trade

Wholesale Sales.—Estimated sales of wholesalers expanded from $5,784,400,000 in 1951 to $8,234,800,000 in 1959. These figures include only wholesalers proper, i.e., they exclude agents and brokers and manufacturers' sales branches. Sales estimates are subject to revision and have not been adjusted for price changes.

---

* Prepared in the Merchandising and Services Section of the Industry and Merchandising Division, Dominion Bureau of Statistics.

1.—Wholesale Sales, by Kind of Business, 1955-59

Note.—Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for resale.

Subsection 2.—Retail Trade

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The estimated value of retail sales nearly doubled in the period 1949-59. Estimates, not adjusted for price changes, are shown by province in Table **2** for 1930 and 1941-59 and by kind of business for the latest five years in Table **3**.

2.—Retail Trade, by Province, 1930 and 1941-59

NOTE.—Figures for 1931-40 are given in the 1957-58 Year Book, p. 938.

Year	Atlantic Provinces[1]	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia[2]	Canada[3]

Retail Chain Stores.—Retail chains are defined as companies operating four or more retail outlets in the same or related kinds of business. A consistent rise in sales has been evident since statistics were first compiled on chain store operations in 1930.

4.—Retail Chain Store Statistics, 1930 and 1941-59

Consumer Credit.—Balances outstanding on credit extended to consumers by retail stores and certain financial institutions are increasing very rapidly. Although the financial institutions included in the survey do not cover all sources of consumer credit, returns from the selected holders indicate that balances outstanding on credit extended to individuals for the purchase of consumer goods and services have more than doubled in the past eight years. The figures of Table 12 do not include credit extended for commercial purposes.

12.—Balances Outstanding on Retail Trade Credit and Loans Extended to Individuals for Non-business Purposes by Certain Financial Institutions, 1951-59

(Millions of dollars)

Year	Retail Trade Credit	Sales Finance Companies	Small Loan Companies	Chartered Banks	Credit Unions	Life Insurance Companies Policy Loans
1951	406	186	114	435	76	199
1952	552	373	148	506	94	213
1953	624	516	176	585	129	225
1954	685	492	215	612	151	240
1955	751	599	279	788	174	250
1956	798	756	356	759	219	270
1957	826	780	362	691	248	295
1958	860	768	400	842	313	304
1959	915	806	484	1,001	394	323

Accounts outstanding on the books of retailers stood at $992,500,000 at the end of 1959. This amount excludes lumber and building material dealers and farm implement dealers, two trades included in previous years, so that the results more closely approximate "consumer" credit shown in Table 13.

13.—Retail Credit 1952-59, and by Kind of Business, 1959

Period	Accounts Receivable (at end of period)		
	Instalment	Charge	Total

All other trades	33.4	93.1	126.5

[1] Excludes lumber and farm implement dealers. [2] Included in "Charge". [3] Includes "Instalment".

Subsection 3.—Service Establishments

Service establishments as defined in the Census of Distribution included all those places of business where the major part of gross income (annual turnover) was derived from the rendering of services as opposed to the sale of merchandise. The following types of service were covered: amusement and recreation such as motion picture theatres and producers, and bowling alleys; personal services such as laundries and dry-cleaning plants, barber shops and shoe repair shops; certain business services such as advertising agencies and window display services; repair services such as automobile repair, radio repair and watch repair; burial services; photography, commercial and portrait; hotels and tourist camps; and other services such as cold storage locker rentals and taxis.

Summary statistics of the detailed coverage in 1951 are given in the 1955 Year Book at pp. 974-977. Annual data for certain services only are included here.

Motion Picture Theatres.—The receipts of motion picture theatres increased steadily up to 1953 when they amounted to $108,603,966, but thereafter decreased each year to $75,513,974 in 1959. The number of theatres in operation has also decreased rapidly. The receipts of drive-ins, the most recent of theatre developments, reached a high point in 1959 at $7,143,925; the previous peak was in 1954.

14.—Motion Picture Theatres and Receipts, by Province, 1957-59

NOTE.—Figures cover regular and drive-in theatres only; receipts are exclusive of amusement taxes.

Motion Picture Production.—Table 16 shows the operations of private firms in the production and printing of motion picture films and film-strips for industry, government, education, entertainment, etc. Films are also produced by government agencies but information concerning such production is, of course, not available. In addition, five firms in other business categories produced films in 1958 (one feature, seven television and 18 other non-theatrical, 288 newsreel and 21 commercial advertising) which brought them a revenue of $101,000.

16.—Summary Statistics of Motion Picture Production by Private Firms, 1952-59

Year	Firms	Employees	Salaries and Wages	Gross Revenue		
				Production	Printing and Laboratory	Other Revenue
	No.	No.	$	$	$	$
1952	30	386	1,006,918	1,331,393	1,274,137	..
1953	32	387	1,150,890	1,592,779	1,230,493	..
1954	45	478	1,549,233	2,106,131	1,456,405	1,328,021
1955	46	445	1,460,421	2,456,038	1,051,673	512,727
1956[1]	59	1,127	2,483,910	3,726,557	2,095,985	423,899
1957	58	1,216	2,758,560	4,471,710	2,978,626	469,369
1958	52	1,133	2,770,375	3,902,780	3,344,948	421,975
1959	54	1,365	3,471,347	5,085,690	3,229,240	389,480

[1] Figures from 1956 include laboratories with no motion picture production; these are not included in previous years.

Table 17 shows types of film produced by private industry, classified by major producing region, and by government agencies during 1958 and 1959. Of the total of 514 films of five minutes or longer produced by private industry in 1959, 40 television and 15 other non-theatrical films were adaptations or language versions of original films; 11 were made for other than Canadian sponsors. Of the government films, 20 theatrical shorts, 10 television and 61 other non-theatrical films of five minutes or longer were adaptations or language versions of original films and one film was produced for a sponsor from outside Canada.

Private industry and government agencies together printed 47,978,205 feet of 16mm. film in black and white, 7,802,333 feet of 16mm. film in colour, and 21,200,275 feet of 35mm. film in black and white.

Section 2.—The Marketing of Agricultural Products

A special article covering the general movement of farm-produced foods from producer to consumer, with the exception of the grain trade and livestock, appears in the 1956 Year Book, pp. 917-922. Grain and livestock marketings are covered in each edition of the Year Book; 1959-60 data on grain appear in Subsection 1 following, and 1959 figures on livestock in Subsection 2.

Subsection 1.—Grain Trade

Marketing Problems and Policies, 1959-60

Based on the combined total for the five major Canadian grains (wheat, oats, barley, rye and flaxseed), a relatively small increase occurred in production during the 1959-60 crop year, while marketings, exports, domestic disappearance and carryover stocks all registered declines from their respective 1958-59 levels. Growing conditions were variable across the country in 1959. Late June rains offset early-season drought conditions in the Prairie Provinces only to have wet weather and unseasonable snowstorms hinder harvesting operations. A large quantity of grain was harvested in tough or damp condition and Canadian Wheat Board marketing quotas (see p. 921) had to be adjusted to bring this grain forward for terminal drying. In addition, an estimated 56,000,000 bu. of wheat, 26,000,000 bu. each of oats and barley and 2,600,000 bu. of flaxseed remained in the fields over winter. Harvesting of the over-wintered grain was largely completed by early May and a satisfactory recovery was reported from most areas, although some loss of yield and grade did occur. Marketing of wheat, oats and barley continued under the compulsory crop year pools system of the Canadian Wheat Board.

According to the Canadian Wheat Board delivery quota policy for the 1959-60 crop year for western grain, an initial quota of 100 units was in effect at local delivery points at the beginning of the marketing year. Permit holders were entitled to deliver a maximum of 300 bu. of wheat or 800 bu. of oats or 500 bu. of barley or 500 bu. of rye or any combination of these grains which, when calculated on the unit basis, did not exceed 100 units. Deliveries of flaxseed were subject to an initial quota of 5 bu. per seeded acre, effective

Aug. 1. The initial unit quota was followed by general delivery quotas, based upon bushe per specified acreage and the removal of the flaxseed quota on Oct. 13, 1959. Prior to th crop year 1958-59, acreage seeded to Durum wheat was excluded from specified acreag as this crop was delivered on a quota based on seeded acreage. However, on Jan. 21 1958 the Canadian Wheat Board announced that, effective Aug. 1, 1958, acreage seede to Durum wheat would be considered part of the producer's specified acreage for quot purposes. As a result of this change, Durum wheat was deliverable only on the unit o specified acreage quotas during the crop year 1958-59. Therefore, effective Aug. 1, 1959 the specified acreage for delivery purposes consisted of each permit holder's acreage seede to wheat (including Durum), oats, barley and rye as well as summerfallow and eligibl acreage seeded to cultivated grasses and forage crops. The crop year ended with 4 stations on a 6-bu. quota and 1,962 stations on a quota of 7 bu. per specified acre. Durin the crop year a number of supplementary delivery quotas were issued on oats and barley The amount of grain marketed under these special authorizations was, of course, in addition to the quantities of oats and barley which producers chose to deliver under the initia and general quota policies.

Total marketings of the five major grains in Western Canada during 1959-60 amounte to 516,695,000 bu., representing a decrease of 6 p.c. from the comparable 1958-59 tota of 551,977,000 bu. and 13 p.c. lower than the ten-year (1948-49—1957-58) average o 595,490,000 bu. Combined exports of the same grains, including wheat flour, rolled oats and oatmeal, malt and pot and pearl barley in grain equivalent, amounted to 364,136,000 bu. compared with the 1958-59 figure of 390,000,000 bu. and the ten-year average o 404,700,000 bu. Carryover stocks of the five principal grains in all positions at July 31, 1960 were estimated at 763,500,000 bu., 6 p.c. less than the 1959 total of 810,600,000 bu. but 20 p.c. greater than the ten-year average of 635,500,000 bu.

21.—Supply and Disposition of Canadian Grain, Crop Years Ended July 31, 1959 and 1960

(Millions of bushels)

[1] Import data for wheat, oats, barley and rye, respectively, include flour in terms of wheat, rolled oats and oatmeal in terms of oats, malt and pot and pearl barley in terms of barley and rye flour in terms of rye.

[2] Fewer than 50,000 bu.

[3] Export data for wheat, oats and barley, respectively, include bagged seed wheat, wheat flour in terms of wheat, rolled oats and oatmeal in terms of oats and malt and pot and pearl barley in terms of barley.

[4] Includes human food, seed requirements, industrial use, loss in handling and animal feed.

Wheat.—*Supply and Disposition.*—Total supplies of wheat for the 1959-60 crop year amounted to 962,500,000 bu., consisting of carryover stocks of 549,000,000 bu. and production of 413,500,000 bu. This was the first season since 1954-55 that total supplies slipped below the 1,000,000,000-bu. level. Exports of wheat and flour totalled 277,300,000 bu., down 6 p.c. from the figure for 1958-59. Domestic disappearance of wheat in Canada dropped to 147,600,000 bu. from the high level of the previous year. With total disappearance amounting to 424,900,000 bu. and production to 413,500,000 bu., carryover stocks at July 31, 1960 registered a small decline of 11,400,000 bu. and amounted to 537,600,000 bu. This was the third successive year of decline of carryover stocks from the record of 733,500,000 bu. attained at July 31, 1957.

22.—Production, Imports, Exports and Domestic Use of Wheat, Crop Years Ended July 31, 1955-60

(Millions of bushels)

[1] Includes bagged seed wheat and wheat flour in terms of wheat.

[2] Fewer than 50,000 bu.

Price and Marketing Arrangements.—Marketing of Western Canadian wheat during the crop year 1959-60 was again conducted by the Canadian Wheat Board on a one-year pool basis, with the initial payment remaining at $1.40 per bu. basis No. 1 Northern in store Fort William–Port Arthur or Vancouver. The ten-cent premium for No. 1 C.W. Amber Durum which prevailed during the crop years 1953-54 to 1957-58, inclusive, was discontinued at the beginning of 1958-59 and the initial payment for this grade since Aug. 1, 1958 has been the same as for No. 1 Northern. No adjustment payments on the 1958-59 deliveries were made during the crop year but on Feb. 12, 1960 an interim payment on the 1958-59 wheat pool account was announced, and this averaged 10 cents per bu. for all grades; the full amount of payment was some $36,700,000. The final payment was announced on June 15, 1960 and amounted to about $33,900,000 after deduction of net operating costs, including carrying charges, interest and administrative expenses and Prairie Farm Assistance Act levy. The average final payment amounted to the equivalent of 9.2425 cents per bu., while the total payment for No. 1 Northern, basis in store Fort William–Port Arthur or Vancouver and prior to deduction of the PFAA levy, amounted to $1.59569 per bu. No adjustment payments on 1959-60 deliveries were made during the crop year but on Feb. 14, 1961 an interim payment on the 1959-60 pool account for wheat was announced. As in the preceding year, this payment was based on 10 cents per bu. for all grades and the full amount of this payment was some $37,700,000. The final payment on the 1959-60 wheat pool had not been announced at the time of writing.

The crop year 1959-60 coincided with the first year of the fourth three-year International Wheat Agreement. In the preceding agreements, exporting countries undertook to supply guaranteed quantities to importing countries when prices reached the maximum price; and importing countries undertook to purchase guaranteed quantities from exporting countries when prices reached the minimum price. This was abandoned in favour of a continuing obligation by individual importing countries to purchase, when prices are below the maximum price, a specified percentage of their annual commercial imports. Sales under the agreement were quite widely distributed with 30 of the 34 importing countries included in the pact purchasing wheat and/or flour from Canada. The return of the United Kingdom to the International Wheat Agreement, for the first time since 1952-53, resulted in a large increase in Canadian sales under the Agreement. Purchases of Canadian wheat and flour under the terms of the International Wheat Agreement amounted to the equivalent of 235,200,000 bu. during 1959-60 and accounted for 42 p.c. of all sales by the nine exporting countries participating in the Agreement. The leading market for Canadian wheat and flour under the new Agreement was the United Kingdom with shipments to that country, at some 93,600,000 bu., accounting for 41 p.c. of the total Canadian International Wheat Agreement exports. Other major importers of Canadian wheat and wheat flour through the media of the International Wheat Agreement were: Japan, 46,800,000 bu.; the Federal Republic of Germany, 24,900,000 bu.; Belgium–Luxembourg, 10,900,000 bu.; Switzerland, 7,800,000 bu.; the Netherlands, 7,900,000 bu.; the Union of South Africa, 6,700,000 bu.; and the Philippines, 6,200,000 bu. Exports of Canadian Class II wheat were sharply reduced, and reflected the re-entry of the United Kingdom to the International Wheat Agreement. The larger importers of Class II wheat in 1959-60 were: France, 5,500,000 bu.; Poland, 4,900,000 bu.; and the United States, 3,600,000 bu.

Total domestic (commercial and farm) disappearance of wheat in 1959-60 amounted to 147,600,000 bu. compared with the 1958-59 figures of 167,600,000 bu. and the ten-year (1948-49—1957-58) average of 150,900,000 bu. The carryover at July 31, 1960 amounted to 537,600,000 bu. and represented a decline of 2 p.c. from the 1959 total of 549,000,000 bu. During the crop year 1959-60 domestic sales of all classes of wheat were made at the same prices as those prevailing for wheat sold under the International Wheat Agreement. Class II prices for all grades of wheat coincided with the IWA and domestic quotations.

Other Grains.—*Supply and Disposition.*—Data *re* supply and disposition of the major Canadian grains for the crop years 1958-59 and 1959-60 are given in Table **21**.

Price and Marketing Arrangements.—Marketing of Western Canadian oats and barley in 1958-59 and 1959-60 was again carried on through compulsory crop year pools, administered by the Canadian Wheat Board. The initial payment for oats in the 1958-59 crop year, basis No. 2 C.W., in store Fort William–Port Arthur, was 60 cents per bu., the same as in 1957-58. The initial payment for barley, basis No. 3 C.W. Six-Row in store Fort William–Port Arthur, at 96 cents per bu., was also unchanged from that of 1957-58. No interim payments were made on either grain during the crop year but final payments were announced on Apr. 1, 1960. The final payment on the 122,400,000 bu. of barley delivered to the 1958-59 pool averaged 4.35946 cents per bu. after deduction of Board operating costs, including carrying charges in country and terminal elevators and Board administrative expenses and the 1-p.c. PFAA levy. Total prices (basis in store Fort William–Port Arthur) realized by producers for representative grades after deducting carrying charges in country and terminal elevators, Board administrative costs, etc., but before deducting the 1-p.c. levy were $1.00681 per bu. for No. 3 C.W. Six-Row barley and $0.90021 per bu. for No. 1 Feed barley. Some 4,700,000 bu. of rye and 17,500,000 bu. of flaxseed were delivered by farmers in Western Canada in 1958-59.

The initial payment for oats in the 1959-60 crop year, basis No. 2 C.W., in store Fort William–Port Arthur, was 60 cents per bu., the same as in 1958-59. No interim payments were made during the crop year but the final payment was announced on Feb. 13, 1961. The final surplus for distribution was some $3,900,000 based on 23,700,000 bu. delivered to the 1959-60 pool and averaged 16.281 cents per bu. The initial payment for barley, basis No. 3 C.W. Six-Row, in store Fort William–Port Arthur, at 96 cents per bu. was also unchanged from that of 1958-59. No interim payments were made during the crop year but the final payment was announced for barley on Apr. 20, 1961. Based on the 94,900,000 bu. delivered to the 1959-60 pool and a final payment to producers of some $2,000,000, the average payment was 2.131 cents per bu. Some 4,300,000 bu. of rye and 14,000,000 bu. of flaxseed were delivered by farmers in Western Canada in 1959-60.

Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.—Total receipts of the five major grains at eastern elevators in the 1959-60 crop year amounted to 350,597,000 bu., 12 p.c. lower than in 1958-59. Shipments amounted to 333,715,000 bu., 19 p.c. less than in 1958-59. Each of the five grains shared in the decline in both receipts and shipments, as indicated by the figures in Table **23**.

23.—Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1956-60

Note.—Figures for the crop years ended 1922-55 are given in the corresponding table of previous Year Books beginning with the 1931 edition.

Grain Inspections.—The volume of Canadian wheat, oats, barley, rye, flaxseed, corn, buckwheat and mixed grain, together with a small quantity of United States grain, inspected by the Board of Grain Commissioners for Canada in the crop year 1959-60 amounted to 542,000,000 bu., 1 p.c. above the 1958-59 total of 534,500,000 bu. Quantities of the various grains inspected at eastern and western points, as well as inspections of soybeans, beans, peas, sample grain, screenings, sunflower seed, rapeseed, mustard seed, safflower seed, and sorghum appear in Table **24**.

Lake Shipments of Grain.—The 1960 navigation season opened on Apr. 10 and closed on Dec. 13. During that period, total vessel shipments of wheat, oats, barley, rye, flaxseed and buckwheat amounted to 278,700,000 bu., 3 p.c. less than the 1959 total of 286,200,000 bu. The 1959 season of navigation opened on Apr. 20 and closed on Dec. 17.

Wheat Flour.—Production of wheat flour in the crop year 1959-60 amounted to 40,345,000 cwt., about 1 p.c. higher than in the previous crop year. Similarly, wheat milled for flour at 91,400,000 bu. was slightly higher than during 1958-59. Of the wheat milled for flour, about 82,500,000 bu. were Western Canadian spring wheat (other than Durum), the remainder consisting of Ontario winter wheat to the amount of 5,700,000 bu., Durum 2,200,000 bu., and "other" 1,000,000 bu. Based on a daily operating potential of some 169,700 cwt., utilization of milling capacity averaged 78.0 p.c. in 1959-60 compared with 76.2 p.c. in the preceding year.

Exports of wheat flour during the 1959-60 crop year amounted to 16,074,000 cwt., only slightly lower than exports during the previous crop year.

Subsection 2.—Livestock Marketings*

Cattle marketings through commercial channels during 1959 numbered 2,305,146, a drop of 14.8 p.c. from the 2,706,984 marketed in 1958. There was a further significant advance in quality of animals slaughtered under inspection with choice and good carcasses accounting for 45.3 p.c. of total cattle gradings compared with 40.2 p.c. in 1958. Exports of live cattle at 312,351 head were less than half of the 1958 total of 658,095; movement of feeder cattle to the United States was much lower and more cattle remained in feedlots in Canada. Calf marketings followed the same pattern as cattle with the number returned to country feedlots sharply higher than in 1958. Cattle prices were moderately higher than in 1958 and fluctuated within a narrower range; the high and low for good steers at Toronto were $26.50 and $23.64, respectively, and the year's average was $25.10 compared with $22.90 in 1958.

The most significant feature of livestock marketings in 1959 was increased output of hogs. Gradings at approved and inspected plants totalled 8,568,217 carcasses, an amount exceeded only by the record of 8,863,178 in 1944. With such volume of output, prices tended to be close to the floor price which was based on $25.00 for Grade A dressed at Toronto up to Oct. 1 and thereafter $23.65. Average quality was slightly higher with 29.5 p.c. of carcasses Grade A compared with 28.7 p.c. in 1958.

Sheep and lamb marketings were down 0.6 p.c. from the 1958 totals and prices averaged slightly lower. Gradings reflected similar quality.

---

* More detailed information is available from DBS annual report *Livestock and Animal Products Statistics* (Catalogue No. 23-203), and the Department of Agriculture publication *Livestock Market Review*. Statistics of livestock and poultry are given on pp. 443-446 of this edition of the Year Book.

Section 3.—Warehousing and Cold Storage*

Warehousing ranks high among the means by which the utilities of 'place', 'time' and 'possession' are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold storage methods in the conservation of perishable foods.

The presentation of warehousing statistics is difficult because it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship with merchandising. However, if the strict economic definition of warehousing is adopted, then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Because the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, they are not, in the strict economic sense, services that add the utility of 'time' to commodities already worked up into 'form'. As some clear line must be drawn and because separate statistics of the latter branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are gathered together under this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products, and Subsection 4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers, who supervise all movements into and from such places of storage.

---

* Information supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, and National Revenue and of the Dominion Bureau of Statistics.

Subsection 1.—Licensed Grain Storage

Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 648,200,000 bu. at Dec. 1, 1959, an increase of 9,000,000 bu. over the level of Dec. 1, 1958. Some 4,639,000 bu. of this increase occurred in western country elevators, 3,540,000 bu. in eastern elevators and 1,000,000 bu. in semi-public terminal elevators. Licensed grain storage capacity in Canada had reached a peak of 603,000,000 bu. at Dec. 1, 1943 but, following the disposal of heavy wartime stocks, declined to 482,400,000 bu. at Dec. 1, 1947. Since that date capacity has increased each year.

Reflecting the cumulative effects of five bumper crops in the six-year period 1951-56, which was only partially offset by reduced production in the three years 1957-59, the pressure on Canada's grain handling and storage facilities remained great. In addition, considerable difficulty was experienced in harvesting the 1959 grain crops in the Prairie Provinces and large amounts of wheat, oats and barley were threshed tough and damp. This situation placed additional strain on the grain handling facilities as farm marketing quotas had to be adjusted to bring forward tough and damp grain for terminal drying. Farmers' marketings of western grain are governed to a considerable extent by space made available in country elevators as grain moves forward into domestic and export channels. As indicated in Table **29**, there was a decline in the proportion of occupied elevator space from 69.1 p.c. at Dec. 2 to 65.2 p.c. at Mar. 30 in the 1959-60 crop year but by July 31, the proportion had increased to 78.3 p.c.

Subsection 2.—Cold Storage and Storage of Foods

Cold Storage Warehouses.—Under the Cold Storage Act (RSC 1952, c. 52), as amended (RSC 1952, c. 313), subsidies are granted by the Federal Government to encourage the construction and equipment of cold storage warehouses open to the public. The Act is administered by the Department of Agriculture.

There are five classifications of cold storage warehouses in Canada: (1) public warehouses that store foods and food products and where the entire space is open to the public; (2) semi-public, or those that store foods and where part of the space is retained for the products of the owner and the remainder is available to the public; (3) private, or those that store foods and food products and allot no space to the public, a classification that includes refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and where food and food products may be cut, processed, chilled and frozen for storage in lockers; and (5) bait depots, where space is used solely or principally for the freezing and storing of bait for the use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general those owned and operated by firms trading in the goods stored in the warehouse are considered as private, although most of these places rent space to the public when it is not required for their own purposes.

The figures in Tables **30** and **31**, compiled by the Department of Agriculture, give some idea of the cold storage warehouse capacity in Canada, but it must be explained that it is not possible to secure completely accurate information on this subject and that the figures are approximations only.

Cold Storage Holdings of Fish.—Stocks of frozen fish held in Canada during 1960 followed the usual seasonal trend. Normally, stocks decrease gradually during the early months of the year and reach a low point at the beginning of April or May when fishing activity is at its lowest ebb; during subsequent months they increase and reach a peak at the beginning of October or November.

In 1960, stocks were on the average slightly higher than in 1959. The increase is attributable almost exclusively to larger holdings of cod fillets and blocks. The demand for Canadian fresh and frozen groundfish fillets, particularly cod fillets, in the United States had begun to weaken early in 1959 as a result of heavy imports from some European countries. The situation improved during the latter part of 1960, United States imports from

Iceland and Norway having declined appreciably in the interim. Stocks of cod fillets and blocks began to pile up during the last few months of 1959 and were generally higher during 1960 than in the previous year. At the end of 1960, however, the situation had improved and stocks were lower than a year before. Because of reduced production, holdings of both Pacific halibut, dressed, and Pacific salmon, dressed and filleted, were on the average lower than in 1959.

33.—Storage Stocks of Fish, by Month and by Type, 1958, 1959 and 1960

NOTE.—Stock totals are as at the beginning of each month; stocks of individual products are monthly averages.

Cold Storage of Dairy Products.—Cold storage facilities are a necessary adjunct in the manufacture of dairy products, most of which are perishable in varying degrees. All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres. Temperature control is important in the curing process for cheese as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for 17 days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses. As soon as milk is bottled it is placed in storage and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

Cold Storage of Apples and Potatoes.—Cold storage space for apples in Canada has increased rapidly in recent years as a result of the promotion of orderly marketing, the extension of the marketing season generally, and increased production in some areas. This trend has followed the curtailment in shipments to traditional markets in the United Kingdom and other European countries after World War II. There has been an increase recently in the construction of both privately and co-operatively owned storages, particularly in the Province of Quebec.

Potatoes are not ordinarily held in cold storage but recently there has been an increase in the construction of potato storage houses and warehouses in the commercial producing areas.

Subsection 3.—Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres, often on a waterfront so that full advantage may be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat, rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Saint John, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

Subsection 4.—General Warehousing

Public Warehouses.—The summary statistics of the warehousing industry in Canada presented in Table 35 cover the operations of the majority of firms offering warehousing and storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

Many public warehousing companies also operate a local moving and cartage service and others a motor-carrier business, involving long-distance moving. Commencing with 1958, firms earning greater revenue from long-distance moving than from the warehousing business are included in the *Motor Carrier—Freight* report. Prior to 1958 there was some duplication between the warehousing and motor freight carrier series where firms were involved in both industries. The 1959 statistics given in Table 35 include returns from 204 firms which appear to belong primarily to the warehousing industry.

35.—Summary Statistics of the Warehousing Industry, 1956-59

Customs Warehouses.—Warehouses for the storage of in-bond goods are known as customs warehouses and are divided into three categories. (1) Those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods and others, known as Queen's warehouses, used for the storage of unclaimed, abandoned, seized or forfeited goods. (2) Bonded warehouses operated and owned by a person other than the Crown and used for the storage and safekeeping of imported goods after entry and conforming to one of the following: (*a*) an entire building or part of a building completely separated from the remainder of the building by adequate partitions or walls and devoted to the safekeeping of imported goods consigned or sold to the warehouse keeper or other persons; (*b*) a yard, shed or other suitable enclosure or area devoted to the safekeeping of imported goods too large or too heavy for lodging in a Class 2(*a*) warehouse; and (*c*) a farm, yard or other suitable enclosure devoted to the safekeeping of horses, sheep and cattle for feeding and pasturage. (3) Sufferance warehouses for the landing, storage, safekeeping, transfer, examination, delivery and forwarding of imported goods before entry and conforming to one of the following: (*a*) a warehouse operated or provided by railway, express, airline and shipping companies; (*b*) warehouses for in-bond goods arriving by commercial motor vehicle; and (*c*) all sufferance warehouses not described under (*a*) or (*b*).

Subsection 5.—Bonded Warehousing and Storage of Wines

Bonded Warehousing.—The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses and only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes that are not stamped and duty paid are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on but which are used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

Table **36** shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. In addition, the year-end inventories of beer in breweries amount to some 30,000,000 gal.

36.—Distilled Liquor, Tobacco, Cigars and Cigarettes in Bond, Quarterly 1956-60

[1] Duty has been paid herein on the malt.

[2] Duty solely on gallonage basis since 1954.

Storage of Wines.—The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying wines.

38.—Native Wine Produced and Placed in Storage for Maturing, 1951-59

Section 4.—Co-operative Organizations

Marketing and purchasing co-operatives account for the larger part of Canadian co-operative business and continue to play an important role in the marketing of agricultural products and in the purchasing of farm supplies. Co-operatives in these categories reported a membership of 1,290,462 during 1958-59, a small decrease from the previous year. There is some duplication in this number since many individuals belong to more than one co-operative.

The number of co-operative associations has declined slightly each year since 1956, mostly through amalgamations, but the number of places of business has increased substantially. The total business for these associations amounted to $1,315,167,000 in 1958-59, an increase of 7 p.c. over the previous year. Co-operatives accounted for 33 p.c. of the total value of farm products marketed in Canada in 1958-59, the same proportion as in the preceding year. Sales of farm products by the marketing and purchasing group were recorded at $963,330,000, an increase of more than $65,000,000 over 1958. Grain and seed, valued at $366,589,000, made up 38 p.c. of the total farm products marketed, and sales of livestock at $287,204,000 and of dairy products at $216,447,000 accounted for the bulk of the remainder although sales of fruit and vegetables and of eggs and poultry were also substantial, with reported amounts of $41,682,000 and $38,828,000, respectively.

On a provincial level, Saskatchewan recorded the greatest value of produce co-operatively marketed, amounting to $259,647,000; grain and seed sales made up 60 p.c. of this amount. Other provinces sharing substantially in the co-operative sales of farm products were: Ontario with $185,499,000, Alberta $174,026,000, Quebec $108,077,000, Manitoba $81,403,000 and British Columbia $65,189,000.

Co-operative sales of merchandise and supplies to members amounted to $332,943,000 in 1959, an increase of $36,000,000 over the previous year; feed, fertilizer and spray material represented 32 p.c. of the total. Leading provinces for co-operative sales of merchandise and supplies were: Quebec with $80,124,000, Saskatchewan with $69,844,000 and Ontario with $64,950,000. Members' equity in their marketing and purchasing co-operatives increased by $24,000,000 in 1959 and an increase of $31,000,000 was recorded in liabilities to the public.

The local co-operatives are served by ten wholesale associations which are owned and controlled by their respective member co-operatives. The wholesale associations had assets amounting to $77,000,000 in 1959, of which members' equity represented 42 p.c. Total sales of supplies and farm products by these wholesales amounted to $283,000,000 in 1959, an increase of 13 p.c. over the previous year.

In addition to the above-mentioned associations, there are 846 service co-operatives providing a wide range of functions such as housing, rural electrification, medical insurance, transportation, recreation facilities, custom grinding, seed cleaning, operation of farm machinery, restaurant operation or other services. These associations had a total membership of 263,084 and assets amounting to $95,642,000 in 1959.

The data for marketing and purchasing co-operatives do not include fishermen's co-operatives. Such co-operatives reported a membership of 10,968 in 1959 and are organized in all provinces with the exception of Manitoba and Alberta. In 1959 they reported sales of fish amounting to $21,014,000 and sales of fish supplies amounting to $4,147,000, which constituted about 10 p.c. of all fish and fish supplies marketed in Canada. The proportions reported for the different areas across the country were: the Atlantic Provinces 37 p.c. (including the business of United Maritime Fishermen, an interprovincial co-operative), British Columbia 31 p.c., Ontario 15 p.c., Quebec 15 p.c. and Saskatchewan 2 p.c.

39.—Summary Statistics of Co-operative Marketing and Purchasing Associations, Crop Years Ended July 31, 1950-59

Totals	**2,716**	**1,194,911,000**	**2,585**	**1,296,273,000**

[1] Duplication exists in this column as some associations market produce as well as handle supplies, some associations market more than one product and some handle many of the supplies listed.

Section 5.—Interprovincial Freight Movements*

Statistics relating to interprovincial freight movements are difficult to collect since there are no controls over or barriers to such trade. Provincial freight traffic statistics are available for loadings and unloadings of goods carried by rail, water, pipeline and motor transport.

Details of railway freight movement are confined to tons loaded and unloaded by province and contain a certain amount of import and export of goods shipped by water. The figures shown in Table **42**, however, do not give a precise measure of total interprovincial freight movement by rail; they indicate only the net interprovincial movement of railway freight, which is but one aspect of that trade. For water-borne traffic, Table **43** shows tonnages of all cargoes unloaded at Canadian ports in both interprovincial and intra-provincial trade, by province of origin. Interprovincial data for oil carried by pipeline are given in Tables **44** to **46**; Table **44** shows the quantity of oil entering Canadian pipelines by province and by type of line, and Table **45** shows the quantity of oil delivered by Canadian pipelines by province and by type of line. Oil movement by pipeline between Canada and the United States is also included in Tables **44** and **45**; imports for each province are shown in Table **44** and exports for each province in Table **45**. Canadian crude oil re-imported by the Interprovincial Pipe Line Company through its pipeline in southern Ontario is shown separately in Table **46**.

---

* Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

Section 1.—Controls Affecting the Marketing of Farm Products

Subsection 1.—Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners which, since 1912, has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935.

The Board of Grain Commissioners.*—The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three—a Chief Commissioner and two Commissioners—reporting to the Minister of Agriculture.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C., and leases the Canadian Government elevator at Port Arthur, Ont., to a privately owned grain company. The Executive Offices of the Board and other principal offices are situated in Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west. Total personnel is approximately 900.

On a fee basis, the Board provides official inspection, grading and weighing of grain, and registration of warehouse receipts. All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the performance of all obligations imposed upon them by the Canada Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give direction regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four Assistant Commissioners—one in Alberta, two in Saskatchewan and one in Manitoba. These Commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the uniform quality of the top grades of Red Spring Wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act, 1 p.c. of the purchase price of wheat, oats, barley, rye, flax and rapeseed purchased by such licensees.

---

* Prepared by W. J. MacLeod, Secretary of the Board of Grain Commissioners for Canada, Winnipeg, Man.

The Canadian Wheat Board.*—The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 for the purpose of "the marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada". The Board was at first a voluntary Board, that is, farmers had the option of marketing their wheat through it or through the private grain trade. In 1943, under the War Measures Act, the Board was made a compulsory Board, and all wheat going into commercial channels was required to be marketed through it. At the end of the War, the Transitional Powers Act continued the Board as the sole marketing agency for wheat until 1947 when the Canadian Wheat Board Act was amended. The major wartime powers of the Board were continued in the 1947 Act. It is under provisions of this 1947 legislation (RSC 1952, c. 44 and amendments) that the Board is operating today.

The Canadian Wheat Board accomplishes its objective of orderly marketing of grain through regulation and agreement. It owns no grain handling facilities but, by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic or overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters. In its sales operations, the Board endeavours to meet the wishes of overseas buyers and, on occasion, enters into direct contracts. When an exporter completes an export sale, in his capacity as an agent of the Board, he is responsible for the transaction; he completes the transaction with the buyer and settles with the Board for the purchase of the wheat from the Board.

When the commercial storage facilities are inadequate to handle all the grain produced, it is necessary for the Board to regulate the flow of grain from the producer to these forward positions. The first step is accomplished by the use of producer's delivery permits issued annually by the Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulating the amount of grain delivered by the producer to the country elevator by the use of a quota system, and by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process—transporting the grain from the country elevators to the large terminal elevators in Eastern Canada, Churchill or the West Coast—is carried out by the railways. The Wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs are set by an agreement between the railways and the Federal Government.

The fourth major step—storing and handling of the grain at terminal elevators—is done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

In the case of oats and barley, the Board's operations are less extensive than those relating to wheat. These two grains are sold in store positions at the terminal elevators at Fort William–Port Arthur and Vancouver. Oats and barley are marketed either on a straight cash basis at prices quoted daily by the Board or on the basis of exchange of futures concluded through the facilities of the Winnipeg Grain Exchange. The Board controls the movement of coarse grains to the Lakehead. The private trade is responsible for the movement of oats and barley from Fort William–Port Arthur or Vancouver positions.

---

* Prepared by C. B. Davidson, Executive Assistant, The Canadian Wheat Board, Winnipeg, Man.

The producer receives payment for his wheat, oats and barley in two or three stages. An initial payment price is established early in the crop year by Order in Council. The initial payment price less the cost of handling grain at the local elevator and the transportation costs to the Lakehead or Vancouver is the initial price received by the producer. This price is a guaranteed floor price in that if the Wheat Board, in selling the grain, does not realize this price and the necessary marketing costs, the deficit is borne by the Federal Treasury. However, with very few exceptions, the Wheat Board has operated without financial aid from the Federal Treasury.

After the end of the crop year, but prior to the final payment being made, if the Wheat Board can confidently foresee a surplus accumulating and if authorized by Order in Council, an interim payment is made to producers. This interim payment is the same amount per bushel to all producers of the same grade of grain. When the Board has sold all the grain or otherwise disposed of it in accordance with the Canadian Wheat Board Act, the Board, if authorized by Order in Council, makes a final payment to producers.

Under the Prairie Grain Advance Payments Act, administered by the Board, producers may receive, through their elevator agents, cash advances on farm-stored grain in accordance with a prescribed formula. The purpose of this legislation is to make cash available to producers pending delivery of their grain under delivery quotas established by the Board. Cash advances are interest-free as far as producers are concerned.

Western Canadian producers receive the price for their grain that the Wheat Board receives, less its operating costs including carrying charge, and the general level of prices received by the Board is determined by competitive conditions in world markets. The only subsidy received by the farmer in the Canadian wheat marketing system is the part payment of storage costs for wheat made by the Government of Canada. Under provisions of the Temporary Wheat Reserves Act, the Minister of Finance, out of the Consolidated Revenue Fund, pays to the Wheat Board the storage costs on wheat in storage at the end of the crop year in excess of 178,000,000 bu.

Subsection 2.—Controls Over Farm Products Other Than Grain*

With the growing complexity of agricultural marketing caused by the fact that the producer is more and more becoming a specialist and produces more for marketing off the farm than for his own needs, a substantial and continuing change in the approach to marketing problems is evident.

With the exception of tobacco, little or no attempt at production control has been introduced in Canada, although in some countries this also forms part of a broad program of market control. The methods of control might be summarized as follows, although some of those mentioned may be combined in certain operations: (1) producers may organize co-operative marketing agencies; (2) producers may establish compulsory marketing boards to bargain with groups buying the product for processing or further sale; (3) producers may establish compulsory marketing boards to direct the flow of product and bargain on price; (4) producers may request the Federal Government to establish a government marketing board; and/or (5) producers may request intervention in the pricing system through an offer by the Government to either assist in financing the orderly marketing of the product or in the support of the price of the product in the market-place.

The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy.

---

* Prepared in the Economics Division of the Administration Branch, Department of Agriculture, Ottawa. A more detailed statement on this subject, including the history of developments leading to the present situation, appeared in the 1960 Canada Year Book, pp. 961-966.

There exists in Canada today considerable legislation on the federal, provincial and municipal levels which gives government agencies and farmers the power to take measures for controlling the marketing of farm products. Legislation relating to grain marketing is dealt with in the previous Subsection and an attempt is made here to cover in a general way some of the other types of legislation, with particular reference to the Agricultural Products Co-operative Marketing Act, the Agricultural Products Marketing Act and the Agricultural Stabilization Act.

General Marketing Controls.—At the municipal level, many cities and towns have controls with respect to the sale of foods in certain areas or with respect to health standards. For example, most municipalities have some form of health regulation concerning milk being sold within their boundaries. This is often extended to licensing for the purpose of assuring sanitary standards on the farms where the milk originates. Similarly, zoning by-laws not only may control the areas where commercial merchandising generally can take place but may state that public markets where fruits and vegetables and other goods are sold may operate only under fairly strict supervision of the municipality.

With respect to provincial government controls, most of the provinces enacted milk control legislation before 1940. Most of them finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to carry out some system of licensing which provides for the revocation of such licences if those engaged in the fluid milk business do not conform with the orders of the milk control board.

Price control exercised by these boards takes various forms ranging from the establishment of a minimum price per hundredweight to be paid to producers to complete control of minimum or maximum prices for milk to consumers. In recent years there has been a tendency in some provinces to leave more freedom in pricing to normal competition except for the establishment of a minimum price to producers; in a number of provinces this minimum price is fixed by formula.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk; and (2) authority to require a bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before ceasing to accept milk from any producer, producers to give notice before ceasing to deliver milk to any distributor, and the prohibition of distributors requiring capital investment from producers.

Thus fluid milk controls are not only widespread but numerous and are generally considered to be administered in the public interest as well as in the interest of those who have regular opportunities to appear before the boards in connection with requests for price changes.

Federally, the Food and Drug Directorate of the Department of National Health and Welfare has wide control over the content of foods sold, the Department of Agriculture exercises some control over size and type of packages and containers used in food preparation, and the Weights and Measures Division of the Department of Trade and Commerce also exercises controls in its sphere.

The Agricultural Products Co-operative Marketing Act.—In the late 1930's, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would return to the producer the maximum sales return for his product less a maximum margin for handling expenses agreed upon in advance. Thus the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has been used to a greater or lesser degree from time to time during the intervening years.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. The Government will undertake to guarantee a certain minimum initial payment to the producer at the time of delivery of the product including a margin for handling, sales returns to be made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of 80 p.c. of the average price for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product. The payment to the producer is to be made through the sales agency on a graded basis at the time of delivery of the product.

Agreements under this Act have been made with respect to the marketing of maple products, honey, onions, potatoes, cheddar cheese, apples, peaches, apricots, cherries, oats, barley, flax, rye, corn, fox and mink pelts, and the following seeds: alfalfa, crested wheat grass, brome grass, slender wheat grass, western rye grass, timothy, red clover, alsike clover, sweet clover, creeping red fescue, meadow fescue, and peas. Thus far the Government of Canada has suffered losses under this Act only with respect to fox pelts and potatoes. This experience indicates that any service to agriculture rendered by this Act has been at relatively small expense to the taxpayers of Canada except for minor administrative expenses, most of which have been taken care of as part of the day-to-day administration of the Department of Agriculture.

The Agricultural Products Marketing Act.—Following the withdrawal of wartime powers of the Federal Government, the Agricultural Products Marketing Act of 1949 was enacted to provide delegation for like powers to those established for marketing boards within a province for the purposes of interprovincial and export trade. A Supreme Court judgment in January 1952 cleared the validity of the Agricultural Products Marketing Act but left some doubt with respect to how licences, levies or other charges could be made by marketing boards beyond the extent of immediate administrative expenses without some approval by the Federal Government in its constitutional field of indirect taxation. In April 1957, following a further Supreme Court judgment in respect to Ontario legislation, an amendment to the federal Agricultural Products Marketing Act vested in the Governor in Council the right to authorize local boards to "fix, impose and collect levies or charges from persons engaged in the production or marketing of the whole or any part of any agricultural product and for such purpose to classify such persons into groups and fix the levies or charges payable by the members of the different groups in different amounts, to use such levies or charges for the purposes of such board or agency, including the creation of reserves, and the payment of expenses and losses resulting from the sale or disposal of any such agricultural product, and the equalization or adjustment among producers of any agricultural product of moneys realized from the sale thereof during such period or periods of time as the board or agency may determine".

There are at present close to 75 such marketing boards organized in Canada, about one-half of which are in the Province of Quebec and about one-quarter in Ontario; all other provinces with the exception of Newfoundland have one or more boards.

The annual statistical report prepared by the Economics Division of the Department of Agriculture in relation to these boards indicates that about one-seventh of the farm cash income in Canada in 1959 was received from sales made under the control of provincial marketing board plans, including the following commodities: seed corn, potatoes, other vegetables, sugar beets, tobacco, hogs, certain dairy products, fruits, wool, honey, white beans, maple products, pulpwood, wheat and soybeans. As at Apr. 1, 1961, 31 of these provincial boards had received an extension of powers for purposes of interprovincial and export trade from the Federal Government. Three had received authority to collect levies in excess of administrative expenses.

The Agricultural Products Marketing Act does not give the local or provincial marketing board any greater control over agencies outside the province than is possible through the control of the commodity by the board and whatever contractual arrangements it may make with such agencies outside the province. It does make it possible, however, for marketing boards to give groups within a province complete marketing control over any commodity produced in that province, or any area of that province which may be defined.

The Agricultural Stabilization Act.—The functions of this Act, passed in 1958, and its administration are outlined in the Agriculture Chapter in connection with the special article on "The National Agricultural Program", pp. 399-400.

Under the Act, all price support levels must be related to a price formula based on the most recent ten-year average of market prices for the product concerned. In addition, the Agricultural Stabilization Board, unless the Government sets a higher support level, must support the prices of nine key commodities at not less than 80 p.c. of the ten-year average market price. The named commodities are: butter, cheese, eggs, cattle, hogs, sheep, wheat, oats and barley (for the latter three, the support applies to grains produced outside the prairie areas designated under the Canadian Wheat Board Act). Other commodities can be supported at such percentage of the ten-year average market price as may be approved by the Government from time to time. Prices established for the nine named commodities must be announced so that they can apply for 12 months from the effective date. Support of designated commodities is also normally for a 12-month period.

In the first year of operation of the Agricultural Stabilization Board, 21 commodities were under support. In the year ended Mar. 31, 1960, 18 commodities were under support, and the following year, 16 commodities. Most of the commodities were at the 80-p.c.-or-higher level of the ten-year average. The net cost of support in the fiscal year 1959-60 was approximately $60,000,000, with a higher cost in 1960-61.

The Agricultural Stabilization Board may support the price of products in any one or more of three ways: (1) an offer to purchase by the Board; (2) underwriting the market through producer guarantees, commonly called the "deficiency payment" method; or (3) making such payment for the benefit of producers as may be authorized for the purpose of stabilizing the price of an agricultural commodity. The third method is new under the Agricultural Stabilization Act. All methods have been used during the first years of operation of the Act, although recently there has been some tendency to use the so-called deficiency payment method to a greater degree.

Section 2.—Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade, which serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

By amendments which came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2,

---

* Revised by D. W. H. Henry, Q.C., Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

32, 33, 33A, 33B, 33C and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insurance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. While Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canadian competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger which has or is likely to have the effect of lessening competition to the detriment or against the interest of the public. These Sections also make it an offence to participate in a monopoly which has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; and it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any services he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance". The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused, or counselled the refusal of supplies to a merchant if there was reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "loss-leaders" or as bait advertising or was making a practice of engaging in misleading advertising in respect of such articles or of not providing services that purchasers of such articles might reasonably expect.

The Act provides for a Director who is responsible for investigating combines and other restrictive practices, and a Commission (the Restrictive Trade Practices Commission) which is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement, and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister, ordinarily required to be published within thirty days.

The Act also provides for general inquiries into restraints of trade which, while not forbidden or punishable, may affect the public interest. It further provides in Sect. 31 that the courts, including the Exchequer Court of Canada, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention. Application also may be made to the courts for such an order in lieu of prosecuting and convicting for a contravention of the legislation. By virtue of the 1960 amendments, prosecutions for offences against the substantive provisions of the legislation other than Sect. 33C may be taken either in the provincial courts or with the consent of the accused in the Exchequer Court of Canada. The amendment conferring jurisdiction on the Exchequer Court came into force on Dec. 1, 1960.

In the years 1955-60, the following reports of inquiries under the legislation have been published:—

(1) Loss Leader Selling.
(2) Manufacture, Distribution and Sale of Beer in Canada.
(3) Manufacture, Distribution and Sale of Asphalt and Tar Roofings and Related Products in Canada.
(4) Resale Price Maintenance in the Distribution and Sale of Certain Household Appliances.
(5) Manufacture, Distribution and Sale of Transmission and Conveyor Equipment and Related Products.
(6) Retail Distribution and Sale of Coal in Winnipeg.
(7) Manufacture, Distribution and Sale of Quilted Goods, Quilting Materials and Related Products.
(8) Manufacture, Distribution and Sale of Boxboard Grades of Paperboard.
(9) Production, Purchase and Sale of Flue-Cured Tobacco in Ontario.
(10) The Sugar Industry in Western Canada and a Proposed Merger of Sugar Companies.
(11) Manufacture, Distribution and Sale of Metal Culverts and Related Products.
(12) Purchase of Pulpwood in Certain Districts in Eastern Canada.
(13) Manufacture, Distribution and Sale of Yeast.
(14) Production, Distribution and Sale of Zinc Oxide.
(15) Wholesale Trade in Cigarettes and Confectionery in the Edmonton District.
(16) Study of Certain Discriminatory Pricing Practices in the Grocery Trade.
(17) Manufacture, Distribution and Sale of Ammunition in Canada.
(18) Distribution and Sale of Electrical Construction Materials and Equipment in Ontario.
(19) Sale and Distribution of Surgical Rubber Gloves and Certain Other Surgical Supplies.
(20) The Sugar Industry in Eastern Canada.
(21) Resale Price Maintenance in the Distribution and Sale of Gasoline in the Toronto Area.
(22) Manufacture, Distribution and Sale of Specialty Bags and Related Products.
(23) Automobile Insurance in Canada.
(24) Distribution and Sale of Coal in Sault Ste. Marie, Ontario.
(25) Production and Supply of Newspapers in the City of Vancouver and Elsewhere in the Province of British Columbia.
(26) Manufacture, Distribution and Sale of Transparent Packaging Products and Related Products.
(27) Manufacture, Distribution, Supply and Sale of Belts.

These reports and copies of the Annual Reports under the Act may be obtained from the Queen's Printer or the office of the Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

Section 3.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1960, provincial government liquor control authorities operated 857 retail stores.

Table 1 shows revenue from administration of liquor control by provincial and territorial governments. Details are given in DBS report, *The Control and Sale of Alcoholic Beverages in Canada* (Catalogue No. 63-202).

1.—Provincial Revenue from Administration of Liquor Control, Years Ended Mar. 31, 1958-60

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages imposed by five provinces.

Year and Province or Territory	Net Income from Sales[1]	Sales Tax	Licences and Permits[2]	Fines and Confiscations[2]	Commission on General Sales Tax Collections	Total

Section 4.—Miscellaneous Aids or Controls

Subsection 1.—Domestic Commerce Service*

Trade Standards.—The Standards Branch of the Department of Trade and Commerce consolidates under one Director the administration of the Electricity Inspection Act, the Gas Inspection Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Branch is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

Weights and Measures.—The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada. The Act requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed toward the elimination of sales by short weight or short measure. The number of inspections made in the calendar year 1959 was 479,523 compared with 474,583 in 1958. The more important inspections comprised the following: weighing machines including scales of all kinds, 226,585; measuring machines for liquids, 116,408; weights, 130,644; other measures, 5,886. Total expenditure was $1,111,276 in the year ended Mar. 31, 1960 compared with $1,019,513 in the previous fiscal year and total revenue $1,036,860 compared with $802,149.

Electricity and Gas Inspection.—Responsibilities of the Standards Branch under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the two Acts and staff numbers 185. During the year ended Mar. 31, 1960, 1,097,124 electricity and gas meters were tested as compared with 1,153,516 in the preceding year. Revenue derived from the testing amounted to $849,462 and expenditure to $960,924.

---

* The information on Trade Standards was prepared by the Director of the Standards Branch of the Department of Trade and Commerce, Ottawa, and the material on Product Design and Government Aid to Small Business by the Director of the Trade Publicity Branch of the same Department.

4.—Electricity and Gas Meter Registrations, 1950-59

Year	Electricity Meters	Gas Meters			
		Manufactured Gas	Natural Gas	Petroleum Gas	Total

1958	4,941,667	35,967	1,069,892	5,101	1,110,960
1959	5,157,495	32,799	1,162,678	4,266	1,199,743

[1] Includes five acetylene meters in 1950, 1951 and 1952 and four in 1953, 1954 and 1955.

Product Design.—The Design Branch of the Department of Trade and Commerce administers programs of the National Design Council aimed at stimulating interest in good Canadian product design. The Branch operates closely with the Association of Canadian Industrial Designers and the Association of Professional Industrial Designers of Ontario, as well as with manufacturers and retailers. It organizes travelling exhibitions in Canada and participates in industrial design exhibitions abroad.

Through its close connections with leaders in industry, the Branch administers the Design Award program of the National Design Council. A design award is granted only for products meeting with the high standards of design and quality set by the Council. Photographic and product information records are maintained on each item submitted for a Design Award, as well as on new products for design development. The Branch also administers the Council's scholarship program to encourage the study and teaching of good design in Canada; the scholarships are available only to Canadians.

A bi-monthly bulletin on industrial design is published by the Branch, providing information on scholarships, Council meetings, design awards and exhibitions. A Design Index is published every second year, which includes all approved Canadian designs as well as those that have earned the right to use the design insignia.

Government Aid to Small Business.—The Small Business Branch of the Department of Trade and Commerce provides a liaison between the Federal Government and small business. It is a contact point for businessmen, either individually or through their associations, to explain their problems to the Government; these problems are studied and, in consultation with other departments, recommendations are made where appropriate.

The Small Business Branch is also a clearing house for inquiries on all aspects of business operation, including such matters as the establishment of various types of businesses, capital requirements, licensing regulations, tariffs, taxation and production techniques. The Branch supplies general economic and statistical information on markets, production and related subjects to businessmen who are planning expansions. Inquiries involving technical or specialized knowledge are referred to the appropriate federal departments or agencies. A library and bibliography on all aspects of business management is maintained to assist businessmen on such matters as office procedures, accounting, budgeting and personnel administration.

The Branch also examines the need for pamphlets and books on subjects of interest to businessmen, including information on government procurement, and has published a manual entitled *Selling to the Canadian Government.*

Subsection 2.—Patents, Copyrights and Trade Marks*

Patents.—Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

5.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1956-60

Item		1956	1957	1958	1959	1960
Applications for patents	No.	21,048	21,762	22,257	22,912	24,292
Patents granted	"	11,862	15,513	16,261	18,293	22,021
Granted to Canadians	"	*1,473*[r]	*1,787*[r]	*1,488*[r]	*1,515*	*1,903*
Caveats granted	"	289	245	242	296	291
Assignments	"	17,783	19,124	19,744	20,208	22,015
Fees received, net	$	1,234,810	1,405,136	1,438,218	1,559,705	1,793,685

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 22,021 in the year ended Mar. 31, 1960. Roughly, 70 p.c. of the patents granted were to residents of the United States, 10 p.c. to residents of the United Kingdom and other Commonwealth countries and 7 p.c. to residents of Canada.

Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1872 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland and Japan.

Copyrights, Industrial Designs and Timber Marks.—Registration of copyright is governed by Copyright Act (RSC 1952, c. 55) in force since 1921. Applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada ... in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

---

* The material relating to patents and copyrights was revised by the Commissioner of Patents, and that relating to trade marks by the Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America.

Protection of industrial designs and of timber marks is afforded under the Trade Mark and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office.

6.—Copyrights, Industrial Designs and Timber Marks Registered, Years Ended Mar. 31, 1956-60

Item		1956	1957	1958	1959	1960

Fees received, net	$	21,747	21,628	21,986	23,440	24,614

Trade Marks.—The Trade Marks Office, a Branch of the Department of the Secretary of State, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Industrial Design and Union Label Act and the Shop Cards Registration Act. All correspondence relating to an application for registration of a trade mark or for the use of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

A *Trade Marks Journal* is published weekly giving particulars of every registration of a trade mark and every registration of a registered user, as well as other advertisements and rulings required under the Act. The required fee payable on application for registration of a trade mark is $25 and for registration of a person as a registered user of a trade mark, $20.

7.—Trade Marks Registered, Years Ended Mar. 31, 1956-60

Subsection 3.—Subventions and Bounties on Coal*

A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals to some portions of Central Canada by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. Subventions have been regulated by Orders in Council; it has not been considered practicable to fix the assistance by statute because of frequent changes in the competitive situation.

The Canadian Coal Equality Act (RSC 1952, c. 34), which implemented one of the recommendations of the Royal Commission on Maritime Claims (1926), is designed to assist the Nova Scotia steel industry and only incidentally affects coal. It provides for the payment of 49.5 cents per ton on bituminous coal mined in Canada and converted into coke to be used in the Canadian manufacture of iron and steel. Bounties paid under this authority for the years 1956-60 were as follows:—

Item		*1956*	*1957*	*1958*	*1959*	*1960*
Quantity	ton	654,620	765,352	557,445	604,234	693,581
Amount	$	324,037	378,849	275,935	299,096	343,323

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

The two Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures; thus the statistics presented in each Section are not comparable with those given in the other Section.

Section 1 is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in Section 2.

---

* Revised by the Administrative Officer .Dominion Coal Board, Ottawa.

Section 2 is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) but does not include failures, sales or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics coverage was revised from January 1955 to include business failures only (see p. 936). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

Section 1.—Administration of Bankrupt Estates*

Federal insolvency legislation now comprises the Bankruptcy Act 1949 (RSC 1952, c. 14), the Farmers' Creditors Arrangement Act 1943 (RSC 1952, c. 111), the Companies' Creditors Arrangement Act and to some extent the Winding-Up Act. The two Arrangement Acts are designed to avert failure and the statistics in this Section and in Section 2 therefore do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose, the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act or, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

---

* Prepared by the Superintendent of Bankruptcy, Ottawa. Early bankruptcy and insolvency legislation is reviewed in the 1952-53 Year Book, pp. 914-915.

[1] Includes summary administration provisions of the Bankruptcy Act. [2] In addition to the amount paid to creditors by a trustee, secured creditors realized direct from their security approximately $17,257,607.

Section 2.—Returns under the Bankruptcy and Winding-Up Acts as compiled by the Dominion Bureau of Statistics

The statistics concerning bankruptcies and insolvencies published by the Dominion Bureau of Statistics cover only the failures coming under federal legislation, i.e., the Bankruptcy Act and the Winding-Up Act. Certain documents relating to estates administered under these Acts have, since July 1920, been forwarded to the Dominion Statistician for statistical analysis. The Bankruptcy Act of 1949 altered the administration of bankruptcies by providing for proposals from insolvent persons. Since July 1950, agreements made under this method have not been included with the statistics of bankruptcy, so that subsequent figures are not strictly comparable with those for previous years. Table 2 shows the number of proposals for recent years in order to give a general impression of the trend.

A major revision made in the compilation and presentation of commercial failures statistics by the Dominion Bureau of Statistics extends back to January 1955. The revised series covers business failures only, excluding failures of individuals such as wage-earners, salesmen and executive personnel formerly included. In Tables 2, 3 and 4 figures for the year 1955 are given on both the old and new bases, so as to show the extent to which the series was altered by the revision.

PART IV.—PRICES*

Section 1.—Index Numbers of Wholesale Prices

General Wholesale Index.—The term "wholesale prices" refers in this Section to sales transactions that occur below the retail level; it has more of a connotation of bulk purchase than of any homogeneous level of distribution. Ingredients for the general wholesale price index are obtained mainly from manufacturers but include prices from wholesalers proper, assemblers of primary products, agents and the other types of commercial enterprises who trade in commodities of a type or in quantities characteristic of primary marketing functions. Wholesale price indexes are grouped according to a commodity classification scheme based on chief component material similarities. In addition, indexes classified according to degree of manufacture are available. For the latter, however, because significant groups of manufactured products are not directly included, tabulations are not attempted on narrower bases than "Raw and Partly Manufactured" and "Fully and Chiefly Manufactured" commodity groups. Wholesale price indexes are regularly released in the DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002) which contains related current series on retail and security prices. Volume 23 of that publication is a historical summary reaching back to the year 1867 for some series and, together with DBS Reference Paper No. 24, *Wholesale Prices Indexes 1913-1950*, contains an explanation of index construction and meaning.

The number and identity of commodities contained in the index has been virtually fixed since 1951 when the index was placed on a 1935-39 base. Commodities were included either because they bulked large in total marketings at that time or because they were considered reliable indicators of price change for commodity groups that did. Price movements displayed by the commodities priced are combined in such a way that they influence composite indexes in the proportions of total marketings including imports and exports during the base period.

General wholesale price indexes have been calculated by most countries for many years but the question "What does a general wholesale price index measure?" cannot be given a precise answer. A retail price index can be identified with consumer expenditure, but a general wholesale index covers a much wider range; yet it is not a measure of the purchasing power of money since it does not include prices of land, labour, securities or services, except in so far as prices of these things enter into commodity prices. As a conventional summary figure, its use has tended toward a reference level against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials. Thus, special wholesale groupings and commodity price relatives are now considered to be of greater importance than the general index itself.

Component indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: studies of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and studies in changes of physical volume. They are also used by business firms abroad in connection with sales and purchases in Canada.

During 1960, the general wholesale index increased moderately to a peak of 232.4 in June, its highest point since 1952, and then eased to 230.4 in December, only slightly above the December 1959 index level of 229.7. As a result, the annual average level of prices in 1960 was practically unchanged from that of 1959. Compared with a year earlier, the December 1960 indexes were lower for five of the eight principal component groups within the general index. The movements of the component indexes during the year were mixed.

---

* Revised in the Prices Division, Dominion Bureau of Statistics.

The animal products index declined during the early months of 1960 and, despite a sharp rise in early summer, averaged some 4 p.c. below the 1959 index over the January–September period. During this period prices were lower in 1960 for hides and skins, unmanufactured leather, livestock, fresh meats, cured meats, and beef and veal carcasses. In the last quarter of the year, the index increased 1.5 p.c. in contrast to the sharp 4.3-p.c. drop in the same period of 1959, and in December stood at 255.8, which was 3.4 p.c. above the December 1959 index of 247.4. Higher prices for fishery products, livestock, cured meats and dressed fowl in 1960 were the principal causes of the divergent movements in the final quarters of the two years. Over the year, the animal products index averaged 247.6, which was 2.7 p.c. lower than the 1959 annual average of 254.3.

The textile products index in 1960 ran slightly higher than in 1959. From 228.1 in December 1959, the index advanced to 231.9 in May of 1960 and then eased down to 229.6 in December, 0.6 p.c. above the level of a year earlier. During the first half of 1960, the wood products index averaged slightly higher than in the same period of 1959, and mainly reflected higher prices for wood pulp in the second quarter. From May to September the index dropped 2.2 p.c. from 307.6 to 300.8, with lower prices for wood pulp and sharper declines for fir, cedar and hemlock. It then edged downward to 300.1 at the close of 1960, 1.1 p.c. below the December 1959 index of 303.4. The vegetable products index rose from 200.3 in December 1959 to a high of 206.0 in the second quarter of 1960 before it gradually fell to 199.9 at the close of the year, just 0.2 p.c. below the index of a year earlier. Most of the decrease after the second quarter was attributable to lower prices for grains, livestock and poultry feeds, rubber and its products, and potatoes. Over the year, the 1960 index averaged 203.0 which was 1.8 p.c. higher than the 1959 average of 199.5. The non-ferrous metals index declined 0.5 p.c. from 175.8 in December 1959 to 174.9 in December 1960, as price decreases for copper, lead and zinc and their products in the last half of 1960 outweighed earlier increases for the same commodities. Over the year, however, the 1960 index averaged 177.8, or 1.8 p.c. above the 1959 average of 174.6.

The three remaining principal group indexes—iron products, non-metallic minerals and chemical products—continued fairly steady in 1960 at practically the same levels as in 1959.

Canadian Farm Products Index.—The index of prices of Canadian farm products at terminal markets (on the base 1935-39 = 100) rose from 218.9 in December 1959 to 219.6 in December 1960. The fluctuations over the year were within a narrow range, the high of 229.0 occurring in June. Underlying the price changes were: the strength in livestock, particularly hogs, which commenced in the first quarter; the abrupt drop in August from seasonally high potato prices on Eastern Canada markets; and the major increase in egg prices over the year.

1.—Annual Index Numbers of Wholesale Price Groups 1951-60, and Monthly Indexes 1959 to Mid-1961

NOTE.—Canadian farm products indexes subsequent to July 1960 are subject to revision; other indexes are final to the end of 1960.

[1] Wheat prices used in this index are Canadian Wheat Board buying prices for Nos. 1, 2 and 3 Manitoba Northern at Fort William–Port Arthur. The initial payment is first used and the index revised as further payments are announced. Between August 1945 and July 1950 the price included for No. 1 Manitoba Northern was $1.83 per bushel. For subsequent crop years the price was as follows: 1950-51, $1.85; 1951-52, $1.83; 1952-53, $1.82; 1953-54, $1.56; 1954-55, $1.65; 1955-56, $1.61; 1956-57, $1.586; 1957-58, $1.619; and 1958-59, $1.594. For the crop year 1959-60 the initial payment of $1.40 for Manitoba Northern was increased to $1.50 as of Feb. 14, 1961. Subsequent indexes are based on an initial payment of $1.40. Western oats and barley were brought under control of the Canadian Wheat Board on Aug. 1, 1949. Since then prices used for the Canadian farm products index have been initial payments to farmers, with participation payments included whenever announced.

Index Numbers of Building Materials Prices.—Price movements of materials entering into building construction are currently measured by two special-purpose series: price index numbers of residential building materials and price index numbers of non-residential building materials, for which the base years are 1935-39 and 1949, respectively. Details of weighting and construction and historical series may be found in the special bulletins prepared at the time the indexes were first published.* More recently the composite indexes have been calculated on an annual basis back to 1913; current indexes are published monthly in DBS Bulletin *Prices and Price Indexes* (Catalogue No. 62-002).

The indexes of prices of building materials showed little change over the year 1960. The residential building materials price index (1935-39 = 100) declined almost steadily during the year and, at 293.7 in December, was down from 295.9 a year earlier. The non-residential building materials price index (1949 = 100) moved up from 132.2 in December 1959 to a seasonal high of 132.8 in July and declined thereafter to 132.3 in December, just slightly above the level of December 1959.

---

* *Price Index Numbers of Residential Building Materials, 1926-48* (Catalogue No. 62-505) and *Price Index Numbers of Non-residential Building Materials, 1935-52* (Catalogue No. 62-506). Revised item and weighting for the electrical component of the residential building materials index, effective July 1959, is available on request.

Section 2.—Consumer Price Index

The consumer price index is Canada's official measure of retail price change and is defined as measuring the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases made by a particular population group in a specified time period. This index was recently revised for the fifth time since the inception of series of retail prices in Canada in 1910 and the revised index was introduced in April 1961 in a publication entitled *The Consumer Price Index for Canada (1949=100), Revision Based on 1957 Expenditures* (Catalogue No. 62-518). The primary purpose of the revision was to place the item content and weights on a more current basis. At the same time a review of concepts and methods was carried out and a modification was made in the use of changing seasonal baskets of food in the index budget. The publication referred to contains detailed information on such aspects of the index as purpose, family coverage, base period, items included and their relative importance; it also shows the formulas used in calculating the index, outlines methods of price collection and discusses the conceptual treatment of items such as durables in a consumer price index.

Consumer Price Index Movements.—During the 15 years of almost continuous economic growth following the end of the Second World War there have been several distinct periods of retail price behaviour, the latest of which was in evidence throughout 1959 and 1960. The gradual relaxation of price controls in 1946 combined with consumer demands far in excess of supply brought on a period of rapidly advancing prices, so that between 1946 and 1948 the consumer price index advanced more than 25 p.c. A significant exception to these general price increases was the behaviour of rents which, continuing under some degree of control, increased only 7 p.c. in the same period. Toward the end of 1948, production appeared to be matching consumer demands and, during the slight recession of 1949, consumer prices levelled off. Between the latter months of 1948 and May 1950, retail prices increased only slightly more than 1 p.c. However, with the outbreak of war in Korea in June 1950 came a resurgence of pressure on prices and in the course of the next 18 months further major upward movements took place. The consumer price index rose from 102.7 in July 1950 to 118.1 by December 1951, an increase of 15 p.c. Food advanced sharply from 102.6 to 122.5 or by 20 p.c. The housing component, comprised of shelter and household operation groups, rose from 104.3 to 117.2. The shelter index, based on both home ownership and rents—the latter freed from most of the wartime controls—moved from 107.4 to 118.2, or by about 10 p.c. Household operation, covering such items as furniture, applicances and fuel, rose about the same degree, from 101.6 to 116.4. Clothing experienced a more substantial rise of 16 p.c. from 99.1 to 115.2. The wide variety of goods and services covered in the other groups followed a somewhat similar pattern.

The peak in consumer price levels was reached in January 1952 when the index stood at 118.2, dropping off gradually in the first half of 1952 to reach 115.9 in May, mainly as a result of a drop of about 5 p.c. in the food index. From this point a plateau in retail prices was established which lasted for four years. Over this period, the consumer price index displayed noteworthy stability, ranging narrowly from a low of 114.4 to a high of 116.9. Although the general level of prices remained almost unchanged during this lengthy period, significant variations were taking place around a stable average. Foods recorded mostly seasonal movements during 1953, 1954, 1955 and the first half of 1956. Non-food commodities experienced a decline of about 3 p.c. in a steady gradually downward movement, much of it accounted for by appliances which moved down 17 p.c. On the other hand, rents advanced steadily to stand 13 p.c. higher in May 1956 than in May 1952. The entire group of service items also experienced continuous increases throughout this period.

From May 1956 a distinct change occurred in price patterns. A trend toward higher prices continued through the remainder of 1956 and the first ten months of 1957 and the total index moved up steadily from 116.6 to a new postwar peak of 123.4 in October 1957. Food, which was the component responsible for most of the upward movement at the total index level, rose from 109.3 in May 1956 to 121.9 by September 1957. Housing continued to advance steadily, although at a slightly moderating rate, as did other groups, particularly the service elements. In contrast, clothing prices remained practically unchanged and household operation, continuing to reflect the easy price situation of major household appliances, rose only 2.8 p.c.

The most recent period of upward movement in the consumer price index, which began in mid-1956 and continued throughout 1957, persisted in 1958 but with some evidence of moderating. Over the latter year, consumer prices averaged 2.6 p.c. above 1957, while 1957 prices were 3.2 p.c. above 1956. In the fourth quarter of 1958 consumer prices averaged 2.4 p.c. higher than in the same period a year earlier, while in the fourth quarter of 1957 prices were 2.6 p.c. above the fourth quarter of 1956.

During 1959, the upward movement in the consumer price index was far less marked than in the preceding years. For the year as a whole, the average level of consumer prices increased by 1.1 p.c. as compared with increases of 2.6 p.c. and 3.2 p.c. in 1958 and 1957, respectively. As in the case of the total index, all major groups, with the exception of the food component, averaged slightly higher in 1959 than in 1958. The increases, however, were mostly smaller than in the previous years. The largest increase in 1959, as in earlier years, occurred in the groups other than food, housing and clothing, particularly health and personal care and recreation and reading. Clothing prices were fractionally higher while the housing index increased almost 2 p.c.

The most significant change in the pattern of price movement occurred in food prices which were fractionally lower on average in 1959. This was in marked contrast to increases of 3.0 p.c. in 1958 and 4.6 p.c. in 1957. From 1953 to 1956, the downward movement in food prices had offset increases in other components and provided stability in the total index, a condition that reappeared in 1959.

During 1960, consumer prices continued to reflect the relative stability of the previous year with an over-all price rise of 1.2 p.c. compared with an increase of 1.1 p.c. in 1959 over the year 1958. Changes in six of the seven component groups were quite similar; each of the six were at higher levels compared with 1959 with the increases ranging from 0.9 p.c. for foods to 1.8 p.c. for recreation and reading. The health and personal care component, which in the past has risen faster than any of the other components, again experienced the largest gain in 1960, rising 2.9 p.c. above the 1959 level.

[1] Shelter and household operation combined.

[2] Previously combined as "Other Commodities and Services".

Table 6 provides single commodity price relatives on the base 1949=100 for a number of important foods entering into the food component of the consumer price index. It also provides a record of average prices based on the actual average level of prices prevailing in October 1952 and calculated for the other months on the basis of the price relatives.

Consumer Price Indexes for Regional Cities.—Table 7 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparison. Their function is to measure percentage changes in retail prices—over a certain time in each city or city combination—of a fixed basket of goods and services representing the level of consumption of a particular group of families.

7.—Consumer Price Indexes for Regional Cities 1951-60, and by Month 1959 to Mid-1961

(1949=100)

World Retail Price Indexes.—In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table 8 provides retail price indexes for selected countries for 1957, 1958 and 1959. These indexes measure price changes only within each country and should not be used to compare actual levels of living costs from country to country.

8.—Index Numbers of Retail Prices in Canada and Other Countries, 1957-59

Section 3.—Consumer Expenditure Surveys

A continuing program of surveys of family income and expenditure in urban areas was begun in 1953 and surveys have been conducted since then at two-year intervals. The primary purpose of these surveys has been to collect information for reviewing and revising, if necessary, the weights of the consumer price index. The surveys have therefore been restricted to cover only those families which were comparable in family composition and income level to the consumer price index target group which was selected for index number purposes from a nation-wide survey conducted in 1947-48. For each of the three survey periods covering 1953, 1955 and 1957, respectively, the program consisted of a series of monthly surveys in which the major objective was the collection of detailed expenditure data on food, followed by a recall survey of all expenditures and income for the same calendar year. Detailed results for each survey have been published in two series of occasional publications, of which the latest are *Urban Family Food Expenditure, 1957*, (Catalogue No. 62-516) and *City Family Expenditure, 1957* (Catalogue No. 62-517).

Tables **9** and **10** give summary data on urban family food expenditure as reported by 1,743 families in five Canadian cities—Halifax, Montreal, Toronto, Winnipeg and Vancouver.*

---

* The published report includes separate statistics for St. John's, Nfld.

Tables **11** and **12** give summary results by city and by income of the survey of complete family expenditure and income which was conducted in January 1958. In this survey families were asked to recall or estimate, at a considerable level of detail, expenditures for all budget categories except food. In addition to the cities represented in Table **9**, St. John's, Trois Rivières, Kitchener–Waterloo and Edmonton were included.

The survey was limited to families of specified composition within the size range of two to six persons and with incomes between $2,500 and $7,000. Average of total family expenditure for 1,088 families in the nine cities was $4,830 or $1,421 per person. Food and shelter costs together accounted for slightly over 40 p.c. of the family budget, 24 p.c. going to food and 17 p.c. to shelter. About 4 p.c. of total family expenditure was for household operation, almost 6 p.c. for furnishings and equipment, and 9 p.c. for clothing. The remaining expenditure on commodities and services amounted to 27 p.c., of which automobile purchase and operation constituted 9 p.c. Outlays not classified as current consumption, representing gifts, contributions, taxes and security, were 13 p.c. of total expenditure.

Section 4.—Index Numbers of Security Prices

Investors price indexes for common stocks are calculated on the 1935-39 base and published weekly and monthly for a sample of issues, broadly classified under the headings: industrials, public utilities and banks. Within the first category the sample is further classified by industry. Weekly and monthly indexes of mining stocks including both golds and base metals are calculated and published separately, as are monthly indexes of preferred stocks.

For purposes of index calculation, Thursday closing prices are used for the issues of companies listed on either or both the Montreal and Toronto stock exchanges. Weights are applied to each issue on the basis of the number of shares currently outstanding. The list of stocks included in the various security series, currently totalling 93 for the investors index and 27 for the mining stocks index, are revised annually so that issues that have become important in stock market activity may be included and those of declining interest removed. Provision is also made for stock splits, mergers and the exercise of 'rights'. The indexes are designed to reflect weekly and monthly changes of interest to the investor rather than day-to-day changes of more speculative interest. For that reason the historical record of indexes dating back to January 1914 on a monthly basis* is of significance in any analysis of the degree of fluctuation in stock prices through time.

Investors Index.—A continuation of the strong upward trend inaugurated with the inception of the bull market in December 1953 culminated in an all-time peak in the investors total index of 291.8 in August 1956; the September 1929 peak was 197.8. Subsequent sharp declines that brought the level to 262.3 by November 1956 were reversed in December, and by May 1957 losses had been largely recouped. In mid-1957 prices broke sharply and commenced a seven-month slide to 215.4 by January 1958. At this point the index swung upward to 262.1 in October, continued slowly higher to 279.3 in July 1959, only to break sharply in September. Later it fluctuated moderately, touching a low of 241.7 in October 1960, after which the index strengthened to close the year at 260.2. Among major groups the January–December 1960 changes were as follows: industrials moved up 0.1 p.c., reflecting sub-group gains headed by food and allied products and industrial mines, which were partially offset by sub-group losses led by building materials, textiles and clothing, and machinery and equipment; utilities rose 1.0 p.c., reflecting an increase for telephones and declines for transportation, power and traction; banks rose 1.6 p.c. In the opening months of 1961 continued index strength brought pulp and paper, industrial mines, and telephones to all-time high levels.

Four supplementary indexes of common stock prices, relating to important categories of stocks not covered by existing series, were introduced in May 1960. These are published as interim indexes pending complete revision of the security price indexes. The price reference date for the new series is 1956; construction and weighting methods conform to those of existing indexes. Between January and December of 1960, changes for these indexes were: primary oils and gas, −32.8 p.c.; uraniums, −12.3 p.c.; pipelines, −7.0 p.c.; and investment and loan, +9.6 p.c. For comparison, Table **14** shows related existing series from Table **13** converted to the 1956 = 100 base.

Mining Stocks.—Mining stocks in 1960 continued the downward trend evident throughout 1959, reaching 95.5 at July after which gains occurred which brought the index to 108.5 at the year-end; the net loss was 5.2 p.c. from 114.4 in January 1960. Base metals at 178.2 in December were down 5.1 p.c. from 187.8 in January and golds declined from 82.4 to 78.1, a drop of 5.2 p.c

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The subject of foreign trade covers more than the treatment of exports and imports of commodities, important though this is. In its broader sense foreign trade is made up of the total international interchange of goods, services, securities and other financial transactions, all of which are presented in their appropriate relationship in this Chapter. Following Part I, which is a review of Canada's trade during recent years, Part II gives detailed statistics of external commodity trade. Part III summarizes external transactions from the standpoint of the balance of international payments. Part IV outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure.

PART I.—RECENT DEVELOPMENTS IN CANADA'S FOREIGN TRADE*

Canada's total trade with other countries reached a new peak in 1960. The combined value of exports and imports for the year totalled $10,887,600,000, an increase of 2.2 p.c. over the previous record of $10,649,200,000 attained in 1959. Total exports (domestic exports and re-exports) in 1960 were valued at $5,395,300,000, a rise of 5 p.c. over the 1959 figure; imports, valued at $5,492,300,000, were only fractionally below the high level of the preceding year. The import balance, at $97,100,000, was reduced to slightly more than one-quarter of that for 1959 and was the lowest since 1954. This situation developed unevenly throughout the year, with exports climbing irregularly but with lesser impetus at the close and imports tending to decrease somewhat in the last half of the year.

---

* Prepared in the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

Over the five-year period from 1956 to 1960, export and import prices remained relatively steady. During 1960, the average price levels of domestic exports and of imports showed small advances and, as import prices increased more than export prices, the terms of trade were slightly less favourable. The physical volume of domestic exports rose at approximately the same rate as their value and the physical volume of imports declined somewhat more than their value. Table 1 traces the movements in Canadian trade totals and in the indexes of price and volume over the past five years, and also shows percentage changes during 1958 and 1959.

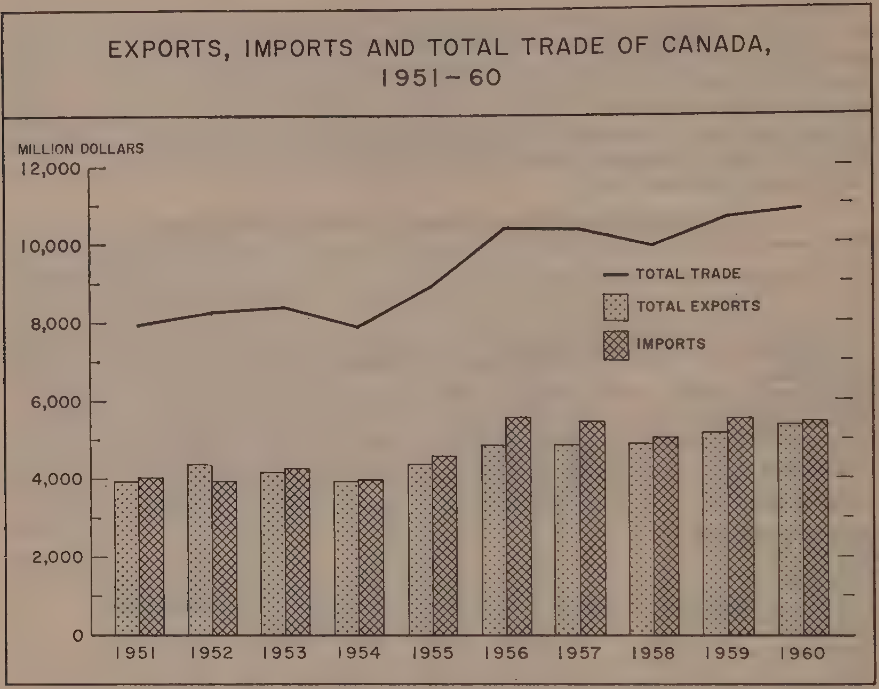
[1] Revised to cover the adjustment for "Special Transactions—Non-Trade" (see p. 967).

The general trend of Canada's trade during the past decade is pictured in the chart on p. 960 and the higher level of both exports and imports attained during the past five years is noticeable. Canada, as one of the leading countries engaged in world trade, is vitally concerned with economic developments in the international field. Following the very large increases in 1955 and 1956, the total value of Canadian trade reached a new plateau. In 1957 and 1958 exports were virtually unchanged and there was considerable decline in imports in 1958 but in 1959 and 1960 exports began climbing again and imports generally regained their earlier level.

During 1959 and extending into the first part of 1960, international trade and economic activity increased among the more industrialized nations—particularly in Western European countries, the United States and Japan. The latter part of 1960 saw some decline in production in the United States and the United Kingdom, and in Western Europe and Japan the rate of advance was slower toward the close of the year. In addition, the primary producing countries were confronted with a considerable decrease in the purchasing power of their basic export commodities. Nevertheless, Canadian exports to most main regions and to practically all leading countries, with the exception of the United States, India and Venezuela, expanded in 1960.

In 1960, Canada's export trade showed some changes in direction, with smaller shipments to the United States and 20 p.c. more to overseas areas. During that year, 56.3 p.c. of total exports went to the United States as contrasted with 61.9 p.c. in 1959. The United Kingdom's share was 17.1 p.c., an increase from 15.4 p.c. in 1959, and other Commonwealth countries took 6.2 p.c. in 1960 as against 5.4 p.c. in 1959. European countries absorbed 11.8 p.c., over 2 p.c. more than in 1959, reflecting the general increase in economic growth there. The share of exports forwarded to Latin America remained approximately the same and the increased proportion taken by other countries mainly represented larger purchases by Japan.



Imports showed less variation and the shares provided by the principal suppliers, the United States at 67.2 p.c. and the United Kingdom at 10.7 p.c., were practically identical in 1959 and 1960. The proportion of imports from other Commonwealth countries rose slightly to 5.1 p.c. while the share supplied by the remaining other countries was 17.0 p.c., a fractional decline from the preceding year. The percentages of shipments received from Europe and Asia advanced slightly but were more than offset by declines in arrivals from Latin America and the Middle East.

Canadian trade with the United Kingdom and the United States during the past ten years and the movement of exports to and imports from these two principal trading partners are illustrated in the charts on p. 961.

The importance of foreign trade to the Canadian economy is reflected in the fact that exports of goods and services have been close to 20 p.c. of the gross national expenditure in recent years while imports of goods and services have been slightly more. Among the major trading nations of the world, Canada in 1960 ranked fifth in the total value of commodities traded, preceded only by the United States, the United Kingdom, the Federal Republic of Germany and France. In recent years, including 1959, Canada had ranked fourth but increased economic activity in France during 1960 put the value of that country's total trade above that of Canada. Total world trade, as shown in Table 2, increased by approximately 11.1 p.c. in 1960 over 1959. On a per capita basis, Canada's position has declined considerably, dropping from first place in the early 1950's to second place in 1957 and 1958, to third in 1959 and to eighth in 1960. The effects of the current improvement in European trading conditions are noticeable, for the leading countries on a per capita basis were Belgium and Luxembourg, Switzerland, the Netherlands, Sweden and Denmark, followed by Trinidad and Tobago, New Zealand and Canada.

[1] Includes military aid extended to other countries.

[2] Excludes China, Union of Soviet Socialist Republics and the communist countries of Eastern Europe (except Yugoslavia).

International Background.—By the latter part of 1960, although world trade remained at a high level, the rate of growth began to moderate. Commodity prices, especially of coffee, cocoa, sugar, base metals, wool and rubber, showed a downward trend during the last half of the year. The primary producing countries were thus faced with a considerable decline in the purchasing power of their exports in terms of necessary imports. Among the industrial countries there was also some slackening in the rate of expansion.

In the United States, although exports rose considerably, there was increasing evidence by the fourth quarter of a gentle but broad decline in the economy, and in the United Kingdom there was a slow-down in production and exports. Western Europe continued to enlarge its manufacturing capacity and external trade, but at a somewhat less rapid pace. Japan's industrial output and imports rose throughout 1960 and exports increased over 1959 totals, but the rate of advance was reduced toward the close of the year.

To counteract this levelling off in international activity, several of the principal trading countries, Canada included, have undertaken intensive steps to promote export trade. In recent years, ample production facilities throughout the main industrial nations, many stemming from new or re-designed plants, coupled with a growing labour force, have ushered in a global era of sharper competition. This has replaced the situation, obtaining since the end of the Second World War and until about the middle 1950's, when international demand for many commodities exceeded supply, actual shortages existed in numerous lines, and world productive capacity was insufficient.

There were further developments among the regional blocs of trading nations that have appeared in recent years. The first of these groups—the European Economic Community (EEC) or Common Market set up by the Treaty of Rome—came into existence on Jan. 1, 1958 and is composed of France, West Germany, Italy, the Netherlands, Belgium and Luxembourg. By January 1961 these countries had made the third 10-p.c. reduction in their tariffs against each other, except for some rates on agricultural products, and had abolished most import licences and quotas between members. The economic advantages of a community of 170,000,000 people are becoming increasingly apparent and industrial production within the six countries climbed approximately 11 p.c. in 1960.

After attempts failed to get the majority of countries in Europe into a general European free trade area, the European Free Trade Association (EFTA), composed of the United Kingdom, Norway, Sweden, Denmark, Austria, Switzerland and Portugal, was brought into being by the Stockholm Convention of Nov. 20, 1959. This group of nations represents a market of 90,000,000 persons. The participating countries have already reduced duties on most industrial goods produced and sold among themselves by 20 p.c. as from July 1, 1960, and hope within ten years to establish a free trade area between members. Each nation will fix its own tariff against the world.

The implications on world trade of these two powerful groups are manifold and efforts on a broad front are being made to prevent Western Europe from splitting into rival and competitive blocs. An important step was the formation of the Organization for Economic Co-operation and Development (OECD), set up in Paris on Dec. 14, 1960. By including Canada and the United States, this new organization of 20 countries will take the place of the Organization for European Economic Co-operation (OEEC) founded in 1948, which was composed of 18 European nations and whose task of bringing postwar economic recovery to Western Europe has been largely accomplished. The main objectives of the OECD will be to encourage economic and financial growth within member countries, to contribute to the sound expansion of the under-developed countries and to work for an increase in world trade on a multilateral and non-discriminatory basis. Membership by Canada and the United States underlines the interdependence of the economies of the Atlantic countries.

In Latin America, two trade groups are in the formative stage. The Latin American Free Trade Area (LAFTA), set up by a convention initialed in Montevideo on Feb. 18, 1960 and subsequently ratified by the respective governments, seeks to bring Argentina, Brazil, Chile, Mexico, Paraguay, Peru and Uruguay into a free trade association. It is possible that other South American nations may join the group. The intention of the Association is to remove all tariffs and trade barriers between members within 12 years and thus to increase their output and prosperity. A treaty signed in Managua on Dec. 13, 1960 between El Salvador, Guatemala, Honduras and Nicaragua created a Central American Common Market. Arrangements were made for future participation by Costa Rica. The treaty provides for the abolition of duties on goods produced within the integrated area and the eventual establishment of a common tariff for the remainder of the world.

During 1960, progress was continued toward the liberalization of international trade and payments arrangements. The free world trading nations associated in the General Agreement on Tariffs and Trade (GATT) took further steps toward the reduction of duties and the removal of import restrictions and the general convertibility of currencies, in keeping with improvements in their financial and economic conditions. However, import controls for agricultural products are still maintained by many countries. The principles of a common tariff applicable to all nations whose goods enter the European Common Market have been largely agreed to by EEC members and negotiations are being conducted toward its implementation with those countries adhering to the GATT.

From the Canadian point of view, the main question posed by the formation of these regional trade groups is how this new situation will affect Canada's agricultural and other exports to the various member countries. In particular, the common external EEC tariffs on a number of important Canadian exports, such as lumber, wood pulp, synthetic rubber and aluminum, are in process of being settled through negotiation among the Common Market members. Also, with regard to the EFTA, there is the problem of possible difficulties created for those Canadian exports that might be affected by the eventual disappearance of the preferential treatment which they have been traditionally enjoying in the United Kingdom market. Though not yet as important as trade with Europe, there is also a growing market for Canadian exports in Latin America and in 1960 over half of these were destined to countries of the LAFTA group. In view of the vital importance to Canada's economy of free and multilateral trade, these latest world developments in the field of common markets are of considerable interest to this country.

Canadian Trade in 1960.—*Exports.*—The principal components of Canadian export trade are drawn from the forests, farms and mines of the nation. Shipments of wood, wood products and paper, agricultural and vegetable products and non-ferrous metals and products together account for over two-thirds of total exports. In descending order of importance, newsprint, wheat, lumber, wood pulp, aluminum, uranium, nickel, copper, iron ore, asbestos and synthetic rubber and plastics were the leading commodities in 1960. Exports of each were valued in excess of $100,000,000 and the majority showed gains during the year. Newsprint valued at over $750,000,000 continued to occupy first place and shipments were 4.9 p.c. above those for 1959. Lumber sales rose 7.0 p.c. and wood pulp exports advanced by 4.4 p.c. For cereals, although world trade in wheat increased, Canadian wheat exports were 7.1 p.c. less in 1960 than in the preceding year and barley and wheat flour shipments declined considerably.

Among non-ferrous metals, aluminum, nickel, copper and zinc, exports were all above 1959 totals but shipments of uranium ores and concentrates, mainly because of decreased deliveries to the United States, were 15.5 p.c. less in 1960. In other principal commodities, crude petroleum, rolling-mill products and non-farm machinery advanced substantially and asbestos and fertilizer exports also rose appreciably. Shipments of farm implements and machinery, however, declined considerably, fish products moderately and iron ore slightly.

Domestic exports to the United States in 1960 declined to $2,934,500,000, a drop of 4.8 p.c. from the 1959 total. The downward trend was attributable mainly to decreased shipments of uranium ores and concentrates, farm implements, nickel, aluminum, iron ore, cattle, lumber and rolling-mill products. Newsprint accounted for more than a fifth of Canadian exports to the United States, shipments rising by 2.6 p.c. in 1960. Lumber was the second commodity, although sales were 4.7 p.c. below 1959. Wood pulp came third, shipments advancing fractionally in 1960. In order of value of exports, uranium fell 15.2 p.c., iron ore 13.5 p.c. and fish products fractionally. Crude petroleum shipments were up more than a quarter, nickel was down by more than a fifth, copper advanced but tended downward at the year-end and exports of farm implements were over a quarter less than in the preceding year.

Exports to the United Kingdom were buoyant, rising 16.5 p.c. to $915,300,000 in 1960. Wheat, which accounted for nearly 15 p.c. of the total, remained the leading export to the United Kingdom, although shipments declined 8.6 p.c. from 1959. Aluminum and products were second, advancing 16.0 p.c., followed by copper and products which rose 42.5 p.c. and nickel, up 47.0 p.c. Newsprint shipments increased by a sixth while lumber exports were nearly double those of 1959. Other grains declined a sixth, wood pulp and iron ore each moved up nearly a quarter while uranium ore and concentrates dropped off a fifth.

Canadian exports to Commonwealth countries, other than the United Kingdom, increased 19.6 p.c. in 1960, being valued at $326,958,000. This was due mainly to advanced shipments to Australia, and included were larger amounts of newsprint, lumber, wood pulp, aluminum, iron and steel products. Shipments to Hong Kong doubled, wheat, textiles, chemicals and non-ferrous metals all increasing. Exports to New Zealand rose substantially, there being higher shipments to that country of newsprint, chemicals, and iron and steel products. Sales to the Union of South Africa rose slightly while those to the West Indies Federation fell fractionally. Shipments to India and Pakistan declined by nearly a third, mainly because of lower wheat deliveries. Exports to India of aluminum and copper products advanced while exports of non-farm machinery and rolling-mill products decreased.

Exports to Western Europe increased by nearly a third in 1960, being valued at $600,115,000. The Federal Republic of Germany took the largest share, followed by France, Norway, Belgium and Luxembourg, Italy and the Netherlands. Shipments to all of these coutries were greater in 1960, particularly to Germany, France and Italy. Wheat sales to France and Italy increased substantially but declined to Germany. The rising rate of production in the six countries of the European Economic Community resulted in increased demand for semi-fabricated iron and steel and for non-ferrous metals, particularly aluminum, copper and nickel.

Exports to South America were valued at $114,200,000, a rise of 4.6 p.c., and those to Central America advanced 11.4 p.c. to $84,100,000 in 1960. Shipments to Argentina, Brazil and Mexico increased considerably while those to Venezuela were nearly a quarter less. Newsprint sales rose to Argentina and Brazil as did rolling-mill products to Argentina and Mexico. Fish and newsprint shipments were less to Cuba and plastics were lower to Mexico and Venezuela. Exports of aluminum to Mexico more than doubled and asbestos products increased.

Shipments to non-Commonwealth countries in Asia advanced more than a quarter in 1960 and were valued at $215,300,000. The bulk of these was to Japan which purchased $178,000,000 worth and thus ranked as Canada's third principal export market. Exports to Japan of wheat, iron ore, aluminum, copper, asbestos and machinery increased considerably while sales of barley, wood pulp and plastics declined.

Imports.—For many years, iron and its products have accounted for over one-third of total imports and non-farm machinery and parts have headed the list of principal commodities. Automobile parts, crude and partly refined petroleum, electrical apparatus, passenger cars, engines and boilers, rolling-mill products (iron and steel), tractors and parts, aircraft and parts, and farm implements and machinery have followed, the order of importance shifting slightly from year to year. In 1960, each of these products except farm implements and machinery exceeded $100,000,000 in value.

More of the leading import commodities showed increases in 1960 than declines when compared with the preceding year. However, non-farm machinery at $580,000,000, by far the most valuable import, was fractionally below 1959. As compared with that year, imports of automobile parts increased by 2.8 p.c., and crude petroleum by 2.1 p.c. Aircraft and parts were up more than 50 p.c. and imports of automobiles, engines and boilers and rolling-mill products showed moderate advance. Imports of cotton fabrics and raw cotton were considerably higher, apparel moderately higher and paper products slightly higher. On the other hand, imports of electrical apparatus dropped 3.3 p.c. for the year and there were considerable decreases in tractors and parts and in farm implements and machinery. Imports of fuel oils and coal declined but those of synthetic plastics increased.

The United States supplied the greatest portion of foreign goods brought into Canada, imports from that country totalling $3,693,200,000 in 1960, a fraction less than in the previous year. Non-farm machinery was the chief import from the United States although deliveries were slightly less than in 1959. Imports of automobile parts, the second commodity, rose 2.1 p.c. in 1960. In descending order of value, farm implements and machinery decreased 17.5 p.c., electrical apparatus dropped 1.3 p.c., fruits were the same in both years and engines and boilers fell 1.2 p.c. Imports of aircraft and parts increased sharply and were nearly three-quarters higher in 1960 than in the preceding year. Among other commodities, rolling-mill products advanced somewhat, as did plastics, books and automobiles. Cotton products and petroleum products each dropped by one-fifth while wood and rubber products each declined over one-eighth. Vegetables increased and raw cotton imports more than doubled. Imports of coal and synthetic fibres were somewhat less than in 1959.

Imports from the United Kingdom in 1960 were valued at $588,900,000, being fractionally higher than in 1959. Automobiles took first place, accounting for over 18 p.c. of imports from that country and were more than one-fifth higher in value in 1960 than in the preceding year. Wool products followed, increasing by one-third. Electrical apparatus declined one-sixth and non-farm machinery dropped slightly. Imports of engines and boilers increased by one-quarter but rolling-mill products and farm implements and machinery each dropped approximately one-tenth. Clay and products and cotton and products were lower. Imports of aircraft and parts increased sharply in the final quarter but, because of decreases in the earlier quarters, were over 14 p.c. less in 1960 than in the preceding year. Precious metals increased by two-thirds.

Imports from the remainder of the Commonwealth at $279,100,000 were 16.7 p.c. higher than the 1959 total. This was attributable mainly to the inclusion in the Commonwealth total of petroleum imports from Kuwait and other British Middle East countries, which prior to 1960 had been credited to Saudi Arabia. There was also a considerable increase in bauxite from Jamaica and total imports from the West Indies Federation, the leader in the Commonwealth group, rose by 11.2 p.c. Australia sent more wool but less sugar, raisins and meats, and total imports fell by 13.6 p.c. Imports from India, Malaya and Singapore, British Guiana and Ceylon remained at about the same high levels as in 1959. There was a considerable rise in imports from the Union of South Africa and moderate increases in goods brought in from Hong Kong, New Zealand and Fiji. Cocoa from Nigeria and Ghana, coffee from British East Africa, and tea from India and Ceylon showed gains. Larger wool and meat shipments from New Zealand, more sugar from Fiji, and increased deliveries of oranges, peanuts, sugar and tobacco from the Union of South Africa contributed to the advance made by the Commonwealth group.

Imports from Western Europe advanced by 1.7 p.c., being valued at $372,200,000 for 1960. The Federal Republic of Germany was the chief source, supplying approximately one-third, followed by France which sent about 14 p.c. Italy and Belgium each provided about 11 p.c. and the Netherlands approximately 8 p.c. Shipments from West Germany increased by 2.5 p.c., from Italy by 13.8 p.c. and from the Netherlands by 7.9 p.c. There was a decline of 12.0 p.c. in imports from France and of 7.6 p.c. in those from Belgium and Luxembourg. Imports of machinery from Germany and Sweden advanced as did imports of passenger automobiles from Germany and electrical apparatus from the Netherlands. Rolling-mill products from Belgium and Germany, automobiles from France, and electrical apparatus from Germany and Switzerland declined considerably.

Imports from South America declined by 4.3 p.c. in 1960 and from Central America and the Antilles by 30.6 p.c. Petroleum from Venezuela, as usual the principal item, fell by 6.7 p.c. Imports of petroleum products from that country were higher but those from the Netherlands Antilles decreased by 30.9 p.c. Less coffee came from Brazil and Colombia, and imports of cotton from Mexico and El Salvador declined sharply. More bananas arrived from Ecuador but deliveries from Panama and Costa Rica declined. Imports of Cuban sugar decreased by one-third. Iron ore shipments from Brazil were considerably higher.

Imports from non-Commonwealth countries in Asia showed a gain of 9.3 p.c., mainly attributable to a 7.5-p.c. increase in imports from Japan and some advance in arrivals from Communist China, the Philippines and Taiwan. There was a wide range of commodities brought in from Japan, among which rolling-mill products and electrical apparatus advanced but machinery dropped. In the Middle East, crude petroleum imports from Iran for 1960 were almost three times as great as in the preceding year.

Leading Trade Partners.—Following the United States and the United Kingdom, Japan and the Federal Republic of Germany, each at over $150,000,000, were the third and fourth most important markets for Canadian goods in 1960 and in the preceding year. Next in line, and each purchasing Canadian goods in excess of $50,000,000 in 1960, were Australia, France, Norway, Belgium and Luxembourg, Italy, the Netherlands and the Union of South Africa. Considerable quantities of Canadian exports also went to the West Indies Federation, Mexico, India and Venezuela, in that order according to value.

During 1960, following the United States and the United Kingdom, the chief sources of imports were Venezuela, the Federal Republic of Germany, Japan, the West Indies Federation and France, each supplying goods in excess of $50,000,000. Sizable amounts of merchandise were obtained from Italy, Belgium and Luxembourg, Saudi Arabia, Australia, the Netherlands Antilles, Iran, the Netherlands and India.

PART II.—FOREIGN TRADE STATISTICS*

Section 1.—Explanatory Notes on Canadian Trade Statistics

Sources.—Canadian foreign trade statistics are compiled from information recorded on customs documents received in the Dominion Bureau of Statistics from the various customs ports in Canada (except for exports of electric energy, which are based on data received from the National Energy Board). Record is kept of value and, whenever possible, of quantity. In considering these trade figures, it should be noted that the statistics do not necessarily reflect the financial transactions relating to the movement of goods since the method and time of payment are affected by many factors.

Coverage.—"Domestic exports" or "exports of Canadian produce" include exports of goods wholly produced in Canada together with exports of previously imported goods that have been changed in form by further processing in Canada. "Re-exports" or "exports of foreign produce" include previously imported goods that are exported from Canada in the same form as when imported.

"Imports" or "imports entered for consumption" include all goods that enter Canada and are cleared through customs for domestic sale or use, i.e., imports on which all duties are paid and which have passed from customs control into the possession of the importer. Goods re-exported without being cleared for domestic consumption are not included. It should be noted that the fact that imports have been "entered for consumption" does not necessarily imply that the goods will all be consumed in Canada but only that consumption can take place without further customs formalities.

The most important exclusions from export totals in the past were: gold, goods shipped to Canadian Armed Forces or diplomats stationed abroad, goods financed under the Defence Appropriation Act and shipped to other NATO countries, temporary exports for exhibition or competition, and fuel and stores sold to foreign vessels and aircraft in Canada. These exclusions continue but, effective Jan. 1, 1960, additional exclusions have been made as follows: settlers' effects, private donations and gifts, and identifiable tourist purchases. These revisions have been made to all tables in this Chapter.

The most important exclusions from import totals in the past were: gold, goods for use of the United States Armed Forces stationed at treaty bases in Canada, Canadian-owned military equipment returned to Canada, ships imported for use in foreign trade and ships of British construction and registry imported for use in the coasting trade, temporary imports for exhibition or competition, and fuel and stores purchased by Canadian vessels and aircraft abroad. These exclusions continue but, effective Jan. 1, 1960, further exclusions from the total have been made as follows: settlers' effects, private donations and gifts, tourist purchases exempt from duty, and goods imported for foreign armed forces or diplomats stationed in Canada. These revisions have been made to all tables in this Chapter.

Effective with statistics for January 1960, certain changes have been made in the types of transaction included in published totals of Canadian exports and imports. Previously, most of the transactions included in these totals were commercial trade with the addition of various non-commercial and special transactions, and some types of the non-commercial and special transactions did not receive uniform treatment in both records. Especially in the past ten years, there were sizable differences between the balance of trade calculated from unadjusted export and import totals and that calculated from data adjusted to exclude non-commercial and special transactions.

From Jan. 1, 1960, a new category has been established in both export and import statistics entitled "Special Transactions—Non-Trade" in relation to the new exclusions from trade totals referred to above. This category includes certain commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of transactions of these types will be excluded entirely from published totals of Canadian merchandise trade, but statistics for the classes of this category will be published in the regular monthly export and import reports. As a result of these changes, the export and import totals will have substantially the same coverage and will provide a much truer picture of the merchandise trade component of the balance of payments. As the deductions from import totals have considerably exceeded those from export totals, the effect of these changes has been to reduce significantly the size of the import balances published in earlier issues of the Year Book.

---

* Based on statistics taken from reports published by the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

Valuation.—Exports are normally valued f.o.b. point of consignment from Canada, i.e., at the actual amount received or to be received by the exporter in Canadian dollars, exclusive of inland freight, ocean freight, insurance, handling and other charges.

Imports are normally valued f.o.b. point of consignment to Canada, i.e., excluding inland freight, ocean freight, insurance, handling and export or import duties. The statistical value of imports is usually the value as determined for customs duty purposes, which is basically the fair market value at which equivalent goods would be sold for home use in the country from which the imports were received; the customs value of imports usually corresponds to the invoice value of the goods. From Jan. 1, 1959, the statistical value of imports on which dumping duty has been collected is considered to be the value of the goods as declared by the importer, i.e., the value for duty less the amount of the dumping duty. This change was introduced to conform with the principle that trade statistics should show, whenever possible, the actual amount paid for imports; previously the statistical value of such imports was considered to be the value for duty.

Country Classification.—Trade is credited to countries on the basis of consignment. For exports from Canada, the country of consignment is that country to which goods are, at the time of export, intended to pass without interruption of transit except in the course of transfer from one means of conveyance to another. For imports into Canada, the country of consignment is the country from which the goods came without interruption of transit except in the course of transfer from one means of conveyance to another. This is not necessarily the country of actual origin, since goods produced in one country may be imported by a firm in another country and re-sold to Canada; in such cases the second country is the country of consignment to which the goods are credited. There is one exception to this rule; an attempt is made to classify by country of origin goods produced in South America, Central America, Bermuda and the Antilles and consigned to Canada from the United States. The effect of this procedure, in force since 1946, is to reduce slightly the imports credited to the United States and to increase those credited to South and Central American countries.

A new classification of countries has been introduced for export and import statistics as of Jan. 1, 1960. This classification is basically geographical; the world is divided into nine geographic regions and within each region the countries are listed alphabetically in two groups—the first for Commonwealth countries and the second for other countries. The regions and the order in which they are listed are: Western Europe; Eastern Europe; Middle East; Other Africa; Other Asia; Oceania; South America; Central America and Antilles; and North America. Henceforth, all basic statistics on trade by country will be presented according to this classification.

The adoption of the new classification facilitated extensive changes in the country detail. Two criteria guided the drafting of such changes and will be used to guide future revisions: (1) total trade between Canada and each country specified should exceed $100,000 per year; and (2) available documentation must be adequate to compile accurate statistics of trade between Canada and each country specified.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Major factors contributing to these discrepancies include:—

(1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.

(2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.

(3) Differing definitions of territorial areas.

(4) Differing systems of geographical classification of trade, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.

(5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

Section 2.—Total Foreign Trade

In considering the figures in Sections 2 to 6, reference should be made to the explanatory notes on trade in Section 1. It must be emphasized that gold imports and exports are excluded from all tables.

1.—Value of Total Foreign Trade of Canada (excluding Gold), 1946-60

NOTE.—Figures have been revised to cover the adjustment for "Special Transactions—Non-Trade", see p. 967.

Year	Exports			Imports			Balance of Trade: Excess of Exports (+) Imports (−)
	Domestic	Re-exports	Total	Dutiable	Free	Total	
	$'000	$'000	$'000	$'000	$'000	$'000	$'000
1946	2,272,005	26,844	2,298,848	1,078,934	762,333	1,841,267	+ 457,582
1947	2,752,799	36,829	2,789,628	1,562,690	979,969	2,542,659	+ 246,969
1948	3,052,090	34,441	3,086,531	1,382,203	1,236,074	2,618,276	+ 468,254
1949	2,974,969	29,428	3,004,397	1,444,124	1,269,902	2,714,025	+ 290,372
1950	3,104,016	38,620	3,142,636	1,621,534	1,503,697	3,125,231	+ 17,406

1952	4,282,361	54,814	4,337,175	2,162,882	1,753,535	3,916,418	+ 420,757
1953	4,097,111	55,158	4,152,269	2,417,960	1,829,848	4,247,808	− 95,539
1954	3,860,217	65,604	3,925,821	2,311,568	1,655,833	3,967,401	− 41,580
1955	4,258,328	69,448	4,327,776	2,638,037	1,929,718	4,567,754	− 239,978
1956	4,760,442	73,335	4,833,777	3,292,516	2,254,435	5,546,951	− 713,175
1957	4,788,880	95,261	4,884,141	3,223,197	2,250,149	5,473,346	− 589,205
1958	4,791,436	102,907	4,894,343	2,952,714	2,097,779	5,050,492	− 156,150
1959	5,021,672	118,628	5,140,300	3,143,065	2,365,856	5,508,921	− 368,621
1960	5,264,052	131,217	5,395,269	3,048,507	2,443,841	5,492,348	97,079

Treatment of Gold in Trade Statistics.—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the totals of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

2.—New Gold Production Available for Export, by Month, 1953-60

NOTE.—Since Mar. 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. Such sales, commencing in April 1956, are included in the figures for new gold production available for export.

(Millions of dollars)

[1] Less than $500.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average *ad valorem* rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average *ad valorem* rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

Tobacco, unmanufactured	26,547	17,320	21,905	18,555	25,140	25,327
Automobiles, passenger	13,165	17,027	22,629	19,382	16,316	24,261
Automobile parts (except engines)	20,333	19,969	12,961	13,086	16,655	23,818
Molluscs and crustaceans	20,246	20,554	20,413	19,220	21,231	23,268
Fur skins, undressed	28,287	25,893	25,944	23,322	24,128	23,161
Fish, cured	23,939	22,835	24,513	22,700	21,791	22,153
Shingles	29,145	24,546	19,393	19,828	21,406	20,968
Aircraft and parts (except engines)	19,906	49,545	39,910	109,113	24,960	20,745
Silver, unmanufactured	19,343	18,693	16,635	18,544	19,721	19,571
Gas exported by pipeline	—	—	2,322	17,984	16,953	18,051

[1] Data for previous years not comparable with 1960.

13.—Leading Imports, 1955-60

Note.—Commodities are arranged in order of value in 1960.

Commodity	1955	1956	1957	1958	1959	1960
	$'000	$'000	$'000	$'000	$'000	$'000
Machinery (non-farm) and parts	445,875	628,521	631,599	532,916	585,235	579,791
Automobile parts (except engines)	246,505	284,788	260,075	240,526	288,596	296,571
Petroleum, crude and partly refined	229,779	271,291	305,557	278,540	277,495	283,172
Electrical apparatus, *n.o.p.*	226,715	257,292	249,328	240,112	269,402	260,473
Automobiles, passenger	83,726	125,539	106,596	141,543	199,601	220,144
Engines and boilers	109,622	132,325	138,451	134,603	135,002	141,419
Rolling-mill products (iron and steel)	129,679	234,709	221,257	147,049	131,263	133,007
Tractors and parts	115,375	159,627	127,658	117,290	172,069	131,541
Aircraft and parts (except engines)	138,091	91,304	93,691	94,820	76,745	116,494
Farm implements and machinery (except tractors) and parts	62,874	72,522	74,572	81,007	101,752	97,118
Cotton fabrics	53,400	62,130	65,049	66,168	70,058	75,150
Paperboard, paper and products	52,690	61,954	62,027	65,478	68,051	68,660
Fuel oils	77,754	81,593	76,204	64,886	77,903	66,853
Synthetic plastics, primary forms	41,072	47,092	49,747	54,891	61,024	64,554
Apparel (except hats) of all textiles	39,039	44,793	47,034	48,903	61,830	63,873
Coal, bituminous	74,453	96,516	90,692	67,067	65,115	61,821
Parcels of small value	41,639	49,371	51,982	53,583	54,514	53,764
Sugar, unrefined	52,312	55,828	75,632	58,578	56,810	50,677
Cotton, raw	61,031	58,748	49,487	45,416	43,079	49,928
Vegetables, fresh	38,852	43,694	41,614	43,431	43,285	49,436
Pipes, tubes and fittings (iron and steel)	50,290	123,088	147,727	88,371	55,305	48,405
Iron ore	31,563	38,722	36,387	28,932	27,129	48,370
Coffee, green	57,010	62,657	59,120	55,252	50,326	47,314
Principal chemicals (except acids), *n.o.p.*	57,677	61,871	54,487	41,785	42,617	43,934
Books, printed	26,035	27,950	31,468	34,765	39,458	43,391
Rubber, crude and semi-fabricated	44,110	40,610	39,101	30,779	52,063	42,587
Logs, timber and lumber	32,773	40,555	31,582	35,697	44,955	39,603
Bauxite and alumina for aluminum	21,472	24,635	38,831	30,284	31,345	39,529

13.—Leading Imports, 1955-60—concluded

Commodity	1955	1956	1957	1958	1959	1960
	$'000	$'000	$'000	$'000	$'000	$'000
Newspapers, magazines and advertising matter	34,794	34,435	35,727	37,012	38,392	39,224
Medical, optical and dental goods, *n.o.p.*	22,952	26,133	28,943	32,334	34,706	37,133
Citrus fruits, fresh	29,903	32,596	32,864	36,058	35,316	36,528
Wool fabrics	31,948	40,191	40,938	35,848	35,668	35,327
Tools	26,739	32,779	36,227	34,738	36,517	34,279

Fruit juices and syrups	15,245	19,126	19,672	25,514	28,178	26,016

Detailed Exports and Imports.—Detailed statistics of all commodities of any importance exported from Canada to all countries, to the United Kingdom and to the United States during the years 1959 and 1960 are given in Table **14**; corresponding statistics for imports into Canada appear in Table **15.**

14.—Principal Domestic Exports from Canada to All Countries, the United Kingdom and the United States, 1959 and 1960

Item	All Countries		United Kingdom		United States	
	1959	1960	1959	1960	1959	1960
	$'000	$'000	$'000	$'000	$'000	$'000
I. Agricultural and Vegetable Products (except chemicals, fibres and wood)						
A. MAINLY FOOD						
Fruits—						
Apples, fresh	6,488	7,998	2,619	3,203	2,934	3,422
Berries, fresh	2,429	3,126	—	—	2,429	3,125
Fresh fruits, *n.o.p.*	343	985	16	30	324	943
Canned or preserved fruits	1,481	904	588	218	508	440
Fruit juices, fruit syrups, and dried fruits	425	393	2	33	136	78
Vegetables—						
Potatoes (except seed potatoes)	1,385	1,891	—	—	302	150
Fresh vegetables, *n.o.p.*	3,624	4,191	—	—	3,399	4,037
Canned vegetables, including soups of all kinds	2,800	6,069	1,115	4,469	106	226
Pickles, sauces, catsups, and dried vegetables	222	459	62	286	49	42
Grains and Farinaceous Products—						
Wheat	441,830	410,453	148,215	135,427	12,863	13,755
Grain, other (including rice)	86,192	68,691	43,311	35,673	22,715	17,372
Flour of wheat	64,903	62,239	23,279	22,661	2,161	1,809
Bran, meal and other milled products, *n.o.p.*	3,337	4,704	500	1,620	1,007	1,023
Bread, biscuits, cereals and other bakery products and prepared foods	3,850	3,905	67	57	2,975	3,200
Malt	10,923	10,908	—	—	5,376	6,207
Sugar and Its Products—						
Maple syrup	1,894	3,075	16	30	1,876	3,042
Maple sugar	2,974	2,534	—	—	2,915	2,475
Sugar and products, *n.o.p.*	800	1,405	26	33	466	952
Coffee, and imitations of	37	47	[1]	—	1	5
Tea	964	1,070	—	—	963	1,068
Vegetable food products, other	1,522	2,167	26	191	715	1,038
TOTALS, A. MAINLY FOOD	638,425	597,216	219,844	203,930	64,221	64,412

	$'000	$'000	$'000	$'000	$'000	$'000
IV. Wood, Wood Products and Paper						
Wood, Unmanufactured or Partially Manufactured—						
Logs and unmanufactured round timber	10,770	13,804	—	—	10,770	13,799
Lumber and timber, *n.o.p.*	37,332	30,498	11	6	34,676	28,334
Plywoods, veneers and other sawmill and planing mill products, *n.o.p.*	17,057	8,956	512	44	8,940	3,179
Pulpwood and other unmanufactured wood	3,812	5,032	—	—	3,712	4,928
Wood, Manufactured—						
Barrels, staves, headings and other cooperage	1,664	2,172	31	[1]	1,632	2,171
Corks and other manufactures of corkwood or cork bark	3,401	2,886	88	61	1,011	849
Wood pulp	8,967	8,657	—	—	8,093	7,996
Fibre, vulcanized, kartavert, indurated fibre and like material, and manufactures of, *n.o.p.*	1,206	995	12	14	1,088	866
Furniture (except of metal)	10,479	10,626	220	217	7,945	7,628
Manufactures of wood, *n.o.p.*	12,432	12,713	421	477	9,653	9,181
Paper—						
Wallboard and other pulpboards and fibreboards	20,117	19,651	232	233	18,692	17,815
Printing paper	5,623	6,058	516	646	5,076	5,350
Wrapping and packing paper	3,058	2,864	36	38	2,938	2,717
Writing, bond and ledger papers	1,470	1,707	36	32	1,411	1,640
Waster paper of all kinds	1,607	1,209	—	—	1,607	1,209
Albumenized and other chemically prepared papers for photographers' use, *n.o.p.*	4,272	5,195	128	235	3,305	3,648
Cigarette paper	1,647	1,516	[1]	1	1,459	1,365
Cable insulating paper	1,606	1,606	44	65	1,525	1,509
Shipping and other containers of paperboard and fibreboard	4,411	4,538	89	89	4,253	4,325
Paper, and manufactures of, *n.o.p.*	24,461	24,565	1,276	1,408	22,592	22,537
Books and Printed Matter—						
Newspapers, magazines, charts, maps, music and photographs	39,996	39,570	475	645	38,673	37,947
Printed advertising matter, commercial blank forms, pictorial post cards, and other printed and lithographed matter, *n.o.p.*	17,264	17,744	824	931	15,659	15,889
Bibles and prayer books, psalm and hymn books, text books, and other books and pamphlets	39,620	43,559	3,358	4,076	31,551	33,706
Totals, Wood, Wood Products and Paper	**272,274**	**266,123**	**8,312**	**9,219**	**236,261**	**228,589**
V. Iron and Its Products						
Iron ore	27,129	48,370	—	1	26,009	46,625
Ferro-alloys	7,100	8,863	583	609	4,147	4,243
Pigs, ingots, blooms and billets	3,445	4,600	59	85	2,734	4,131
Scrap iron	23,803	18,598	17	31	23,551	18,563
Castings and forgings	12,575	8,465	4,150	1,827	8,257	6,236
Rolling-Mill Products—						
Bars and rods	18,925	14,868	2,254	1,913	5,933	6,277
Plates, sheets and strip	59,667	61,075	8,120	6,328	45,641	48,985
Structural shapes and sheet piling	52,671	57,063	11,358	11,348	28,334	33,858
Rails and railway track material	6,068	1,752	257	201	5,709	1,410
Pipes, tubes and fittings	55,305	48,405	12,256	11,444	35,145	28,608
Wire	20,397	18,491	7,000	6,901	8,417	6,538
Chains	6,099	5,698	1,223	1,252	3,964	3,559
Engines, Locomotives and Boilers—						
Engines, diesel and semi-diesel, and parts	38,928	28,945	8,506	6,357	29,682	21,314
Engines, internal combustion, for motor trucks, motor buses, fire fighting vehicles, ambulances and hearses, and parts	14,099	11,754	361	164	13,682	11,500

---

[1] Less than $500.

15.—Principal Imports into Canada for Consumption from All Countries, the United Kingdom and the United States, 1959 and 1960—continued

Item	All Countries		United Kingdom		United States

	$'000	$'000	$'000	$'000	$'000	$'000
V. Iron and Its Products—continued						
Engines, Locomotives and Boilers—concluded						
Engines, automobile and motor vehicle, and parts, *n.o.p.*	11,691	14,246	875	784	10,498	12,573
Engines for aircraft, and parts	37,280	50,515	17,011	26,109	19,589	24,114
Engines, locomotives and boilers, and parts, *n.o.p.*	33,003	35,958	1,050	1,227	31,543	34,237
Farm Implements and Machinery—						
Cream separators and other dairy machinery	6,828	6,163	208	217	5,571	4,982
Harvesting machinery and implements, *n.o.p.*	11,517	10,879	72	52	11,113	10,290
Ploughs, drills and other tillage and planting implements	15,780	14,845	274	433	15,478	14,354
Harvesters combined with threshing machines, and parts	26,979	25,325	58	39	26,898	25,221
Seed separation machinery, *n.o.p.*	968	836	—	—	968	836
Hay presses and parts	10,339	11,018	81	139	10,117	10,728
Spraying and dusting machines	2,028	2,114	60	25	1,934	2,074
Tractors	115,224	83,340	11,454	9,704	103,176	72,507
Parts of tractors, and accessories, including parts therefor	56,845	48,201	2,903	3,265	53,476	44,344
Farm implements and machinery, and parts, *n.o.p.*	27,312	25,938	760	608	26,210	24,879
Hardware and Cutlery—						
Cutlery	5,729	5,441	911	1,010	1,693	1,622
Nails, spikes and tacks	3,199	2,171	979	523	433	370
Butts, hinges, bolts, nuts, washers, rivets and screws	11,561	9,846	1,449	1,184	8,274	7,257
Hardware, *n.o.p.*	7,871	7,806	1,351	1,408	5,772	5,711
Machinery (except agricultural)—						
Sewing machines, washing machines, vacuum cleaners and other household machinery	31,271	28,663	2,106	1,862	25,573	23,590
Ore crushers, rock drills, well-drilling and other mining and metallurgical machinery	67,771	65,917	2,769	2,723	63,069	60,352
Office or business machinery	36,527	42,017	3,288	3,049	28,024	33,381
Printing and bookbinding machinery	36,363	31,928	1,873	2,653	30,546	25,771
Air and gas compressing machinery, *n.o.p.*	12,492	12,358	1,324	1,311	10,771	10,617
Bakery machinery and apparatus	3,356	3,725	98	103	3,194	3,451
Cranes, hoists and derricks, and parts, *n.o.p.*	10,663	10,749	800	806	8,817	9,150
Ice-making and refrigerating machinery, *n.o.p.*	9,704	11,499	298	258	9,385	11,195
Logging machinery	9,339	8,559	153	72	9,039	8,287
Metalworking machinery	41,120	38,959	4,187	3,995	33,157	31,326
Motion-picture projectors and other equipment for moving pictures	4,539	4,630	67	71	3,971	3,867
Paper mill machines, *n.o.p.*	6,778	8,314	1,402	2,846	5,243	5,135
Pumps, power, and parts, *n.o.p.*	11,747	11,332	1,236	810	10,242	10,139
Concrete road-paving machines and other equipment for road paving	8,142	6,124	351	356	7,745	5,768
Sand cast rolls and chilled cast iron rolls, and forged steel rolls	4,725	5,143	964	1,290	3,723	3,741
Shovels, power, and parts	19,411	10,950	260	178	19,008	10,596
Yarn, cordage and fabric machinery	19,933	19,639	3,222	3,641	13,992	13,537
Air-conditioning apparatus	13,143	16,567	453	350	12,564	16,089
Bulldozers, earthmovers and parts	17,478	13,327	715	850	16,711	12,456
Conveying equipment and parts	9,143	6,453	2,970	744	5,394	5,144
Woodworking machinery, and parts, *n.o.p.*	8,930	7,617	475	308	7,965	6,799
Machinery and parts, *n.o.p.*	202,658	215,322	13,620	13,001	179,017	191,228
Stamped and coated products	16,628	14,757	385	377	15,679	13,843
Tools and hand implements	36,517	34,279	4,175	4,224	27,375	25,349
Vehicles (see also Miscellaneous Commodities)—						
Automobiles, freight, new	29,714	23,219	3,587	3,346	22,873	17,315
Automobiles, passenger, new	199,601	220,144	84,626	104,815	62,386	69,638
Automobile parts	288,596	296,571	6,008	6,867	279,407	285,343
Factory and warehouse trucks, motor driven, and parts	1,440	1,249	51	76	1,389	1,152
Fork lift trucks, and parts	12,198	10,438	583	648	11,468	9,737
Railway cars, and parts	6,383	4,586	480	182	5,638	4,188
Vehicles, and parts, *n.o.p.*	9,176	9,257	3,232	3,760	4,351	4,130

15.—Principal Imports into Canada for Consumption from All Countries, the United Kingdom and the United States, 1959 and 1960—continued

	$'000	$'000	$'000	$'000	$'000	$'000
V. Iron and Its Products—concluded						
Ball and roller bearings, and parts	22,620	22,705	1,576	1,550	17,912	17,052
Bottles, cylinders, drums, barrels and tanks	4,468	3,920	147	200	4,297	3,681
Furniture of metal	9,792	9,713	243	272	9,356	9,167
Guns, rifles and other firearms	6,008	5,145	922	761	4,191	3,427
Scales, balances, weighing beams and parts	3,814	4,484	130	209	3,384	3,934
Stoves and other heating and cooking apparatus for electricity, gas, oil, coal, wood or other fuel, and parts	39,426	33,101	567	963	38,620	31,837
Valves, iron	10,912	11,507	1,611	1,105	9,102	10,090
Other iron and steel, and manufactures of	79,199	69,849	7,518	5,459	67,850	60,760
Totals, Iron and Its Products	**2,092,093**	**2,046,307**	**254,110**	**271,276**	**1,666,356**	**1,610,213**
VI. Non-ferrous Metals and Their Products (except gold)						
Aluminum—						
Bauxite and alumina	35,958	45,041	5	3	1,135	1,176
Aluminum, and manufactures of, *n.o.p.*	26,383	27,073	4,188	3,418	19,525	20,793
Brass—						
Brass valves, plated or not, and parts	4,937	4,950	208	202	4,313	4,264
Plumbers' brass goods, plated or not	5,727	4,909	186	44	4,595	4,044
Brass, and manufactures of, *n.o.p.*	16,560	14,065	2,647	1,486	13,036	11,809
Copper, and manufactures of	6,583	6,252	1,300	1,249	4,963	4,727
Nickel, and manufactures of	5,687	5,708	270	197	5,058	5,082
Precious Metals—						
Electro-plated ware and gilt ware, *n.o.p.*	14,072	13,398	961	986	11,741	10,900
Platinum crucibles and other manufactures of platinum	8,295	14,934	6,238	12,690	2,057	2,244
Precious metals, and manufactures of, *n.o.p.*	3,561	4,591	1,347	447	1,235	3,527
Tin, blocks, pigs, bars or granular form	9,182	8,258	1,535	221	2,189	776
Zinc, and manufactures of	3,396	3,091	258	259	2,875	2,669
Alloys, *n.o.p.*	1,955	1,871	805	872	1,053	880
Clocks and watches, and parts	11,449	11,730	537	921	2,226	2,304
Electrical Apparatus, *n.o.p.*—						
Dynamos or generators, and parts, *n.o.p.*	10,181	9,604	1,734	1,892	7,554	7,170
Electric lamps, lights and fixtures	15,625	15,009	128	144	13,527	12,529
Electric motors and parts, *n.o.p.*	17,455	13,614	3,131	2,727	13,983	10,658
Rheostats, controllers and other starting devices	13,151	12,758	640	435	12,267	12,021
Switches, switchboards and parts	12,799	11,707	1,016	802	10,496	10,073
Telephone apparatus and parts	11,728	11,954	3,877	3,311	7,532	8,214
Radio, television tubes	7,827	7,804	420	350	6,270	5,643
Radio and wireless apparatus, and parts, *n.o.p.*	32,778	36,468	6,150	8,818	24,889	26,025
Radio receiving sets	11,657	11,852	301	348	2,321	2,219
Radio set parts	6,010	5,736	2,042	2,170	3,585	3,313
Radio tube parts	7,450	6,751	65	70	7,049	6,357
Electric precision instruments	13,314	15,003	1,051	980	11,623	13,305
Electric steam turbo generator sets	26,482	15,698	24,733	14,732	1,737	86
Electrical apparatus, *n.o.p.*	82,944	86,514	4,526	4,950	71,785	74,401
Gas apparatus	2,305	2,314	162	298	2,057	1,913
Stereotypes, electrotypes and other printing materials	2,724	2,899	44	53	2,609	2,782
Chrome ore and ores of metals, *n.o.p.*	4,493	6,308	5	2	993	1,759
Manganese ore	5,017	2,544	26	13	1,244	613
Buckles, clasps, eyelets, hooks and eyes, dome, snap or other fasteners, of metal, coated or not, *n.o.p.* (not being jewellery); slide, hookless, or zipper fasteners	2,146	1,980	115	113	1,873	1,730
Articles, *n.o.p.*, of metal, for ships	3,963	3,976	1,232	1,054	2,532	2,684
Wire, non-ferrous, *n.o.p.*	8,116	8,071	3,180	2,281	4,752	5,341
Other non-ferrous metals, and manufactures of	19,345	16,686	1,186	1,164	13,962	12,022
Totals, Non-ferrous Metals and Their Products	**471,253**	**471,120**	**76,249**	**69,699**	**300,640**	**296,054**

Wax, vegetable and mineral, *n.o.p.*, and wax and manufactures of, *n.o.p.*	1,817	1,728	13	10	1,258	1,255
All other articles imported	15,630	20,480	914	2,153	12,339	14,154
Totals, Miscellaneous Commodities	**389,895**	**439,468**	**41,588**	**39,360**	**296,619**	**339,232**
Grand Totals, Imports	**5,508,921**	**5,492,348**	**588,573**	**588,930**	**3,709,065**	**3,693,189**

Section 5.—Exports and Imports by Degree of Manufacture and by Purpose

The tables in this Section present Canada's trade according to two alternative classifications other than the classification by component material used in Section 4. A third classification—by group and degree of manufacture according to origin—will appear in the Canada Year Book 1962.

16.—Domestic Exports according to Degree of Manufacture, by Geographic Region and Leading Countries, 1958 and 1959

Region and Country	1958			1959

Section 6.—Comparison of Value, Price and Volume of Foreign Trade

In recent years there has been a substantial increase in the value of Canada's exports and imports. Changes in the value of trade, however, are the joint product of changes in the volume of goods traded and in the prices at which transactions are conducted. To assess the significance of value changes, it is desirable to isolate the contributions made to them by the price and volume factors.

Special indexes of export and import prices have been developed to provide this information. These indexes are based chiefly on unit values (average prices) calculated from the trade statistics, supplemented by information on wholesale and retail prices. Price relatives are calculated for a sample of commodities representing the greater part of export and import trade, and these relatives are weighted by the percentage of 1948 trade represented by each commodity in the sample in obtaining group and total indexes. By dividing these price indexes into the trade values the effects of price change are removed from the values, or by dividing the price index into an index of values on the same time-base an index is obtained showing changes in the volume of trade from year to year.

The grouping of commodities used in these calculations differs slightly from that of the regular trade statistics, the changes being desirable to simplify the pricing problem. The chief differences are that the first two main groups of the trade statistics have been combined into one group, "agricultural and animal products", and that the sub-group "rubber and its products" has been transferred from this group to the "miscellaneous" group. The declared values of domestic exports and imports have been revised to cover the adjustment for "Special Transactions—Non-Trade". An explanation of that adjustment is contained in Part II of this Chapter, p. 967. Table **20** shows the revised values of trade adjusted for pricing purposes and the value, price and volume indexes of Canadian trade for 1957-60.

In the period covered by the table, the indexes of exports, for both value and volume, showed a steady rise. The domestic export price indexes dropped fractionally between 1957 and 1958 but recovered sufficiently between 1958 and 1959 to more than offset the previous decline. A fractional increase was also noticeable in 1960. The over-all import picture showed little change over the period under review except for the considerable decline of approximately 8 p.c. in both value and volume between 1957 and 1958. The index of import prices as a whole did not fluctuate significantly; a drop of 1.8 p.c. between 1958 and 1959 was almost compensated by a 1.5-p.c. rise in 1960.

[1] The groups, though classified by component material, differ slightly from conventional groups (see text, p. 1002).

PART III.—EXTERNAL TRANSACTIONS*

Section 1.—Canadian Balance of International Payments

Canada's total commercial and financial transactions with other countries are presented in summary form in statements of the Canadian balance of international payments. The current account statement, covering all current exchanges of goods and services, indicates the main categories of transactions giving rise to receipts from and expenditures abroad, and the extent to which these are out of balance. The capital account presents an analysis of the movements of short-term and long-term capital that have occurred during a comparable period.

Each year since 1950, with the exception of 1952, Canada's current expenditures abroad exceeded external current receipts. The current account deficits that resulted in this period of rapid Canadian development were financed by inflows of capital. Current account deficits have customarily been associated with periods of Canadian prosperity, and the rate of recent Canadian growth with the development of new resources has been once again an underlying element in the strength of Canadian demands for imported goods and services. High levels of investment at a time when defence expenditures were also very heavy, together with rising levels of consumption, contributed to the deficits. Until 1956 the deficits in recent years were not large in proportion to the high levels of total current transactions and capital inflows of a long-term type were large enough to finance the deficits in most periods. In 1956 and 1957, as the result of continuing high levels of investment and consumption, the deficits rose to unprecedented peaks of $1,366,000,000 and $1,455,000,000; at the same time, inflows of capital in long-term forms rose very sharply. The figure for 1958, reflecting some moderation of economic activity in Canada, was substantially smaller than in the preceding years but nevertheless amounted to $1,131,000,000. In 1959 it rose to $1,504,000,000 but in 1960 declined again to $1,217,000,000. Since 1956, capital inflows in long-term forms have fallen short of current account deficits.

Current Account Transactions.—The deficit of $1,217,000,000 on current account in 1960 was made up of deficits of $145,000,000 on merchandise account† and $1,072,000,000 from non-merchandise transactions. The merchandise deficit has varied widely and was as high as $728,000,000 in 1956, when it accounted for more than one-half of the total deficit. On the other hand, the deficit on non-merchandise transactions has risen with a persistence and significance characteristic of this type of transaction for some years past.

In recent years the relative importance of exports of materials for industry—in such broad areas as forest products, metals and minerals and chemicals and fertilizers—has been increasing or maintained, and the relative position of wheat and other grains has declined. In addition to newer products for export—such as iron ore, petroleum and uranium—there have been general increases in the productive capacity of more traditional staples like pulp and paper, nickel, aluminum and copper. Expansions in demand for industrial materials produced by leading primary industries were responsible for most of a gain of $250,000,000 in 1960 in merchandise exports, which reached $5,400,000,000. In general, imports have demonstrated much more flexibility than exports but the decline in imports to $5,545,000,000 in 1960 amounted to only $27,000,000; within the total, divergent changes in commodity imports occurred, usually characteristic of a period of hesitant economic activity. Fairly substantial declines in imports of farm implements and miscellaneous steel products, crude rubber and petroleum products were in part offset by gains in imports of varied commodities such as aircraft, automobiles, vegetables and cotton and products. Details of Canada's foreign trade are covered in Parts I and II of this Chapter.

---

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. More detailed information is given in the annual publication *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201), and in *Quarterly Estimates of the Canadian Balance of International Payments* (Catalogue No. 67-001).

† The adjustments from commodity trade statistics to merchandise imports and exports for balance of payments purposes include some items covered elsewhere in the balance of payments, as well as other adjustments necessary to conform to international receipts and payments.

The 1960 deficit on non-merchandise transactions of $1,072,000,000 was over nine times as great as that in 1949 and more than twice as great as that for as recent a year as 1955. This rise was largely attributable to the continued rapid growth in Canada's indebtedness to other countries and to the high level of incomes spent by an enlarged population. Roughly one-half of this deficit in 1960 was directly related to Canada's indebtedness abroad and subject to the effects of continued growth, with total interest and dividend payments by Canadians to other countries reaching $669,000,000. Other forms of transfer of investment income added over $100,000,000 of related payments, and there were also large payments by Canadian subsidiaries to parent companies for services. Net payments of interest and dividends totalled $491,000,000 while the net payments on account of all the above groups of transactions which are related to foreign investment amounted to well over $600,000,000, apart from some hundreds of millions of dollars accruing to non-residents which were retained in Canada for further investment and are not included in the current account.

The travel account involves substantial net outlays and reflects high levels of income in Canada. In 1960 net expenditures amounted to $207,000,000. To these payments were added net deficits of $91,000,000 from freight and shipping transactions, $79,000,000 from inheritances and transfers by migrants, and very large net payments of $366,000,000 covering business services, miscellaneous income, government transactions, and personal remittances. Against these expenditures there was $162,000,000 available from new gold production.

The outstanding development in the bilateral pattern of Canada's current account in 1960 was the sharp reversal in the decline, which began in 1953, in the surplus with overseas countries. The re-emergence of a surplus of $139,000,000 following a deficit of $274,000,000 in 1959 restored the traditional pattern of the surplus with overseas countries, contributing to settle Canada's chronic current deficit with the United States. This replacement of a deficit with a surplus was wholly attributable to the improvement in the merchandise trade surplus with overseas countries, as the deficit on 'invisible' transactions continued to widen slightly in 1960. The current account surplus with the United Kingdom was augmented by $158,000,000, and the deficit with other overseas countries was reduced by $255,000,000. The current deficit with the United States of $1,356,000,000 was higher than for any year except 1956 and 1957.

Capital Movements.—In 1960, Canada again drew substantially on the resources, real and financial, of the remainder of the world. The inflow of capital for direct investment in foreign-controlled establishments during 1960 was placed at $690,000,000, over $100,000,000 above the largest figure previously recorded. Transactions in Canadian securities led to a further inflow of $246,000,000, down sharply from the $650,000,000 recorded in 1959. These two groups of transactions added $936,000,000 to Canadian external liabilities in long-term forms. On the long-term assets side, there were outflows of $85,000,000 for direct investment abroad and $20,000,000 for the acquisition of foreign stocks and bonds, but inflows of $32,000,000 from repayments on inter-governmental loans. Transactions in all long-term forms led to a net capital import of about $918,000,000 which was sufficient to finance about 75 p.c. of the current account deficit; the corresponding inflows of $1,089,000,000 in 1959 were equivalent to 72 p.c. of the larger deficit in that year. Including inflows from a reduction in official holdings of gold and foreign exchange, and from increased holdings of Canadian dollars by non-residents, all other capital movements in short-term forms led to a net capital inflow of $299,000,000 in 1960. In both 1959 and 1960 about 80 p.c. of the movement of capital in long-term forms was from the United States.

Inflows of capital for direct investment in foreign-controlled enterprises reasserted themselves in 1960 as the dominant element in the capital account of the Canadian balance of payments, as they were in most of the postwar years until 1956. These persistent and substantial receipts were directed particularly to resource development and associated industries and by far the largest part of the new capital went into the petroleum and natural gas industry, which has been one of the dynamic developments in the Canadian economy. Substantial amounts also went into other mining industries, particularly for the development of iron ore, and to various branches of manufacturing.

From 1956 to 1959 the inflow for direct investment was dwarfed by the inflow of portfolio capital. This arose in part from substantial sales of outstanding Canadian stocks as the non-resident investor added to his stake in Canadian growth. The largest factor, however, was the growing demand in the Canadian capital market, some of which was diverted to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporation, provincial governments and municipalities were all important borrowers abroad.

During this period of large deficits on current account there was a tendency for a declining proportion to be financed by foreign direct and portfolio investments in Canadian establishments, and larger parts by increases in the net external debt of Canadian governments—federal, provincial and municipal—and in other net external liabilities, mainly short-term. However, in 1960 foreign direct and portfolio investment in Canadian establishments increased moderately both in total and relative to the total capital movement. The amount of the deficit financed by increases in the net external debt of Canadian governments fell sharply.

Comments and statistics on the effects of the unprecedented capital inflows of recent years upon the ownership of investments in Canada will be found in the Section on Canada's International Investment Position in Chapter XXII.

Section 2.—Travel between Canada and Other Countries

The volume of travel between Canada and other countries continued to expand during 1960 when visits to and from the country numbered close to 59,000,000, an increase of between 1 p.c. and 2 p.c. over the 1959 record level. Despite the fact that entries of United States residents, which reached 29,700,000, were down almost 1 p.c., total travel to Canada advanced slightly as a result of a 15-p.c. rise in arrivals from overseas countries. Canadian travel abroad in 1960 also expanded. Visits to the United States numbered 29,100,000, an increase of nearly 4 p.c., while trips overseas were 20 p.c. more numerous than in 1959.

Preliminary estimates indicate that expenditures involved in travel between Canada and other countries attained a new high of $1,047,000,000 in 1960, some 6 p.c. above the 1959 figure. Receipts for the year totalled $420,000,000, a gain of $29,000,000 or approximately 7 p.c. Residents of the United States accounted for $24,000,000 of the increase as they spent $375,000,000 on travel in Canada, a 7-p.c. gain over 1959. At the same time, receipts from residents of countries other than the United States advanced 13 p.c. to a record level of $45,000,000. Preliminary figures also show that expenditures of Canadians travelling abroad in 1960 were the highest on record. Total expenditures reached $627,000,000, an increase of $29,000,000 or nearly 5 p.c. over 1959. Expenditures in the United States, which amounted to $462,000,000, accounted for $14,000,000 of the increase and payments for overseas travel gained $15,000,000 or 10 p.c., rising to a record $165,000,000.

Thus, in comparison with 1959, the 1960 deficit on travel account with the United States fell $10,000,000 to $87,000,000 while the debit balance with overseas countries rose $10,000,000 to $120,000,000 and the net debit balance with all countries remained unchanged at $207,000,000.

Only the above summary figures, subject to revision, were available for 1960 at the time of writing; detailed information for 1959 is given in the following text and table.

Residents of other countries who visited Canada during 1959 numbered 29,922,400, an increase of 1,353,300 or about 5 p.c. more visits than in 1958. The total comprised 29,880,800 entries by residents of the United States and 41,600 travellers entering direct from other countries, increases of around 5 p.c. and 8 p.c., respectively. In 1959, Canadians who returned from trips outside Canada numbered 28,146,700, an increase of 592,900 or some 2 p.c. over the previous year. The majority, about 27,989,900, had been to the United States and 156,800 returned direct from overseas. Trips to the United States advanced approximately 2 p.c. while visits overseas were nearly 19 p.c. greater than in 1958.

Total receipts from non-resident travel in Canada during 1959 amounted to $391,100,000, an increase of almost 12 p.c. over the 1958 total. Residents of the United States accounted for $351,100,000 and all of the increase of $41,700,000, as receipts from other travellers remained unchanged at $40,000,000. Total expenditures of Canadians travelling to other countries in 1959 were $598,400,000, a gain of $56,100,000 or just over 10 p.c. over the previous year. Payments on account with the United States were $448,400,000, a gain of between 8 p.c. and 9 p.c., while expenditures connected with travel overseas totalled $150,000,000, an increase of slightly more than 16 p.c. Thus, the 1959 debit balance on travel account with all countries amounted to $207,300,000, advancing $14,400,000 or between 7 p.c. and 8 p.c. above the 1958 figure.

6.—Number and Expenditure of Foreign Travellers in Canada and Canadian Travellers Abroad, 1958 and 1959

Year and Class of Traveller	Foreign Travellers in Canada[1]	Foreign Expenditure in Canada	Canadians Travelling Abroad[1]	Canadian Expenditure Abroad	Excess of Foreign Travellers in Canada[1]	Excess of Canadian Expenditure Abroad

[1] As these figures are the number of entries and re-entries into Canada, they include substantial amounts of in-transit, commuting and local traffic.

Travel between Canada and the United States.—In 1959, short-term visits again amounted to just over 84 p.c. of the total volume but, because of the low average expenditures involved, receipts from this category once more represented only about 24 p.c. of the total amount received from United States visitors to Canada. On the other hand, non-residents remaining in Canada 48 hours or more, although constituting only 16 p.c. of the total visits, contributed more than 76 p.c. of the receipts. Nearly 77 p.c. of all United States visitors entered Canada by automobile and these travellers accounted for about 55 p.c. of the total receipts. However, volume and expenditures varied considerably according to the length of stay. For example, motorists remaining in Canada less than 48 hours made up 65 p.c. of all visits but only 17 p.c. of the receipts, while those in Canada for a longer period constituted 11 p.c. of the total traffic and accounted for 38 p.c. of the receipts. Thus, from an international transactions point of view, the most important group of visitors to Canada are those who arrive by car and remain two or more days. In 1959, the largest proportion of these motorists, some 19 p.c., originated in the State of New York. Other leading States of origin were Michigan with 13 p.c., Ohio with 9 p.c. and Washington and Pennsylvania each with 7 p.c. Furthermore, automobiles from the State of New York accounted for 25 p.c. of the long-term entries through ports in

Ontario, and 27 p.c. in Quebec. Michigan was the State of origin for 21 p.c. of Ontario's long-term motorists and Massachusetts provided 28 p.c. of the entries into the Atlantic Provinces. Over one-half of the motorists remaining 48 hours or more in British Columbia originated in the State of Washington, while 22 p.c. came from California. The majority of long-term automobile entries in the Prairie Provinces were from the States immediately south of the border—Montana, North Dakota and Minnesota. All non-automobile forms of travel, with the exception of rail, carried more United States visitors to Canada in 1959 than in 1958. Receipts from such traffic were also higher; visitors arriving by aircraft accounted for nearly 38 p.c. of the total.

The number of Canadians returning from trips to the United States in 1959 was about 568,200 higher than in 1958 and Canadian travel expenditures in that country were consequently up by $35,100,000. Close to 67 p.c. of the increased volume was in short-term visits lasting less than 48 hours but over 76 p.c. of the increase in expenditures was in the category of long-term traffic outside Canada (48 hours or more). Canadian purchases in the United States declared under the $100 customs exemption at $73,000,000 were $1,000,000 lower than in 1958, continuing the trend in evidence in recent years of a dwindling proportion of expenditures being spent on the purchase of merchandise.

Almost 64 p.c. of the Canadian visitors to the United States in 1959 were motorists who remained 24 hours or fewer and who accounted for only 7 p.c. of the expenditures. Conversely, motorists remaining 48 hours or more represented just 12 p.c. of the volume but nearly 43 p.c. of the expenditures. There were altogether 22,204,800 re-entries by automobile in 1959, a slight increase over 1958.

The number of Canadians returning from the United States other than by automobile was 5,785,100 in 1959 and their expenditures amounted to $213,300,000. About 44 p.c. of the over-all increase in Canadian expenditures in the United States was attributable to this travel category. More residents returned by bus (exclusive of local bus) than by any other form of non-automobile transportation, but the highest expenditures were recorded by persons travelling by air. Air travel between Canada and the United States has shown a fairly constant growth in recent years while a certain amount of irregularity has appeared in the pattern of other types of non-automobile travel.

Particulars of Canadian travel behaviour in the United States were ascertained, as in previous years, through a mail questionnaire distributed to a selected group of travellers. Data obtained through this survey pertain mainly to the long-term category of traffic. Returns from the 1959 survey indicated recreation as the most popular reason for entering the United States, accounting for 45 p.c. of all visits, about 5 p.c. more than in 1958. Visiting friends or relatives accounted for 28 p.c., shopping trips for 15 p.c., business for 8 p.c., health 3 p.c. and other reasons 1 p.c. Less than 1 p.c. of the travellers went across the border for purposes of formal study. Certain seasonal trends are always apparent; business and shopping trips reached their peaks in the second or fourth quarters of the year and recreation during the third quarter when trips to the United States for reasons of health were at a minimum.

Survey data suggested that the Canadians travelling to the United States for formal study remained, on the average, nearly three months and spent $633. Lower averages were recorded by the shopper, who spent $74 during a three-day stay, a period of time closely related to the 48 hour minimum stay required for the $100 customs exemption. The recreation-bound visitor remained, on the average, 10 days and spent $138. According to the survey, the States most frequently visited by Canadian travellers were New York which attracted 27 p.c., Washington 11 p.c., Florida 10 p.c., Michigan 9 p.c. and California 6 p.c. Generally, the destination of the Canadian traveller lay in the State or States immediately south of the province in which he resided.

7.—Summary of Highway Traffic at Canadian Border Points, by Province, 1958 and 1959

Province or Territory	Foreign Vehicles Inward

[1] January–September inclusive.

Travel between Canada and Overseas Countries.—In 1959, non-immigrants arriving in Canada direct from overseas numbered 41,600, an increase of 3,200 or 8 p.c. over arrivals in 1958. An additional 25,000 were estimated to have come to Canada via the United States, making a total of 66,600 visits.

Of the $40,000,000 in travel expenditures received from overseas residents, $21,000,000 went to Canadian carriers for transportation services and the remainder was spent within Canada. Canadian air and steamship lines carried about 39 p.c. of the non-resident visitors entering Canada direct in 1959. Some 57 p.c. of the overseas visitors came by air.

Other	9.7	8.4	1.5	1.4	5.8	5.4

Visitors from the United Kingdom accounted for close to 56 p.c. of the direct entries, about 2 p.c. less than in 1958, and the proportion originating in other Commonwealth countries fell slightly to just over 10 p.c. Residents of other European countries made up 29 p.c. of the direct arrivals, or 3 p.c. more than in the previous year, and about 5 p.c. originated in areas not already specified.

Canadians returning direct from visits to overseas countries in 1959 advanced by 24,700 in comparison with the number returning during 1958. Expenditures also reached a new high at $123,000,000, an increase of $20,000,000 over 1958. It was estimated that $54,000,000 was spent on travel in the United Kingdom, $49,000,000 in other European areas, $9,000,000 in countries designated as "other British" and the remainder in countries not already specified. As in 1958, transportation costs to and from North America accounted for 47 p.c. of the 1959 expenditures by Canadians returning direct from overseas countries, but the proportion received by Canadian carriers, both air and vessel, was slightly lower at 39 p.c. Airlines received approximately 67 p.c. of overseas transportation charges, an increase of 6 p.c. over 1958. All major Canadian airports recorded increased traffic as 106,600 residents returned by aircraft, a gain of 28 p.c. over the 1958 total. Some 46,700 travellers returned direct by vessel, an increase of 2 p.c. over 1958.

Survey results also showed that the United Kingdom was visited by 59 of every 100 Canadians returning direct from overseas countries in 1959, 2 p.c. less than in 1958; 46 of every 100 visited one or more countries in Continental Europe, a decrease of 4 p.c. Both categories include persons reporting combined trips to the United Kingdom and other European countries (approximately 30 p.c.). The percentage of persons who reported trips to the West Indies Federation, Bermuda, and Hawaii remained fairly constant at 6 p.c., 5 p.c. and 4 p.c., respectively, and Mexico was specified as destination by 3 in every 100 travellers, a slight decrease compared with 1958. Again, 1 p.c. went to Central America and the non-British West Indies, and between 4 p.c. and 5 p.c. reported visits to several areas. Less than 1 p.c. visited each of the following areas: Australia and New Zealand, other Commonwealth, South America, and countries not already specified. Seasonal trends were again evident—a higher proportion of travellers went to the United Kingdom during the third quarter than at other times of the year; travel to more southerly destinations such as the West Indies Federation, Hawaii and Mexico was heaviest in the first quarter; and trips to Continental Europe were popular almost equally throughout the four quarters of the year.

Length of stay recorded by Canadians returning direct from overseas varied as to destination and type of transportation used. Visitors to the United Kingdom remained an average of about 44 days but the average length of stay for travellers returning from that country by air was just over 30 days, while boat travellers remained twice as long. Similarly, while the average stay of Canadians in Continental Europe was about 41 days, those returning by air and boat averaged 33 days and 53 days, respectively. These averages include persons who reported visits to both the United Kingdom and Continental Europe. Persons visiting the United Kingdom only remained an average of 52 days and those visiting Continental Europe only, 58 days. Combined trips to these two destinations lasted on the average 68 days, of which 35 days were spent in the United Kingdom. Generally, persons who returned by air and reported either separate or combined trips to these areas spent half as much time abroad as did those returning by vessel.

With few exceptions, the average length of stay in non-European areas, such as Bermuda, the West Indies Federation, Central America and the non-British West Indies, South America, Mexico and Hawaii, was shorter than that in European countries. Travel to these countries is usually by air and often involves shorter and more accessible travel routes. Many Canadians spend vacations of from one to three weeks in these southern areas while travel to European countries is often for the purpose of visiting friends or relatives, which tends to lengthen the stay.

A total of 46,000 Canadians were estimated to have returned from overseas countries via the United States in 1959, some 10 p.c. more than in 1958. In the first quarter of the year, about 43 p.c. of these travellers returned from visits to the West Indies Federation and Mexico, and in the second quarter 33 p.c. In the third and fourth quarters, approximately 55 p.c. and 38 p.c., respectively, returned after visits to Europe.

The deficit in the overseas travel account amounted to $110,000,000 in 1959, representing 53 p.c. of Canada's total travel deficit compared with 46 p.c. in 1958.

Tourist Information.—Tourist information generally is supplied by the Canadian Government Travel Bureau, Ottawa, and detailed information on the National Parks and Historic Sites is available from the Department of Northern Affairs and National Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts, application should be made to the provincial or municipal Bureau of Information concerned.

PART IV.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Foreign Trade Service and Associated Agencies concerned with the Development of Foreign Trade*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy It is appreciated, however, that two-way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with postwar foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described below.

Agriculture and Fisheries Branch.—The primary role of this Branch is to promote the sale of agricultural and fisheries products to overseas markets. It operates through three commodity divisions—the Grain Division, the Fisheries Division and the Food and Agriculture Division—each of which is staffed by specialists in its particular field. The Branch is in close touch with other government departments, both federal and provincial, and with all industry organizations representing producers and processors. It takes an active part in international meetings concerned with agricultural problems, including the Food and Agriculture Organization, as well as in inter-departmental and industry association meetings.

The Branch carries on trade promotional activities and assists Canadian exporters in many ways. Canadian firms are kept informed on market conditions and requirements in foreign countries, competition from other sources of supply, and exchange and tariff restrictions. Information is provided on sanitary and food and drug regulations in other countries and on related topics.

Commodity officers assist industry in participating in trade fairs abroad and help organize trade missions to foreign countries where these may be beneficial in stimulating exports of Canadian agricultural products. Surveys on markets abroad are made on request from industry, or are initiated by the Branch when information obtained from trade commissioners indicates that opportunities for trade in certain products exist in their territories. Up-to-date information on Canadian production, prices, availability of goods for export, and other related details is supplied to trade commissioners to assist them in assessing the market potential in their areas. The Trade Commissioner Service includes a number of officers with agricultural training who are assigned to posts, selected in consultation with the Departments of Agriculture and Fisheries, where their training and experience can be used to best advantage. Their reports on conditions affecting agriculture and fisheries development are published and made available to other government departments and to industry.

---

* Prepared in the several branches concerned and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa. The work of the Standards Branch and the Small Business Branch of the Department, which are concerned with domestic matters only, is dealt with in the Domestic Trade Chapter, pp. 930-932.

The Canadian Wheat Board and the Board of Grain Commissioners for Canada were transferred to the jurisdiction of the Minister of Agriculture in 1960 but international negotiations, consultations and agreements remain the responsibility of the Department of Trade and Commerce, as does the responsibility for export promotion and liaison between the Canadian Wheat Board and trade commissioners.

Canadian Government Exhibition Commission.—The Canadian Government Exhibition Commission is responsible for the planning, organization and administration of all Canadian exhibits in fairs and exhibitions abroad. In addition, the Commission endeavours to advise private exhibitors and their agents on the best means of displaying Canadian products at overseas fairs. The Commission is also responsible for any international fairs and exhibitions held in Canada, financed and sponsored by the Federal Government.

Commodities Branch.—The principal role of the Commodities Branch is active trade promotion. The Branch provides liaison with industry and the business community in Canada, and passes on information about trade opportunities brought to light by officers of the Department at home and abroad.

The Branch has commodity specialists organized in seven divisions: Engineering and Equipment, Minerals and Metals, Forest Products, Chemicals, Appliances and Commercial Machinery, Textiles and Consumer Goods, and Transportation and Trade Services. Within these divisions, individual commodity specialists are concerned with such particular groups of products as engineering services and plant equipment, electrical and electronic equipment and transportation equipment, ferrous and non-ferrous metals, lumber, pulp and paper, chemicals and petroleum products and leather and rubber, as well as a wide range of consumer products. Commodity officers visit plants, attend meetings of business associations, prepare trade studies and market surveys, and assist in arranging displays of Canadian goods abroad for the purpose of introducing them in foreign markets. Commodity specialists direct the attention of trade commissioners to changes in supply conditions and to products available for export, and also relay market news received from trade commissioners to Canadian manufacturers and exporters.

The Branch is concerned with the administration of the Export and Import Permits Act and is active in the export control field, including international arrangements for the control of strategic materials. Branch representatives attend international commodity study groups in such products as tin, rubber, cotton, lead and zinc, where major world suppliers and users of the commodity concerned meet to arrange a framework for orderly marketing and price stability in principal world markets. The Branch also acts as a source of commercial intelligence and compiles and distributes trade information essential to the operation of other branches of the Department.

Export Credits Insurance Corporation.—The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act 1944 (amended in 1946, 1948, 1951, 1957 and 1959), and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It insures persons carrying on business in Canada against risks involved in the export, manufacture, treatment or distribution of goods or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under three main classifications: general commodities, capital goods and services. Coverage for general commodities may be procured by exporters under two types of policies: the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or the Shipments Policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. These policies are issued on a yearly basis, covering exporters' sales to all countries.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit up to a maximum of five years may be necessary. Specific policies are issued for transactions involving capital goods, but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss; these recoveries are shared by the Corporation and the exporter in the proportions of 85 p.c. and 15 p.c., respectively.

Under the Export Credits Insurance Act, Sect. 21, the Corporation may be authorized to enter into certain contracts of insurance, where the Board of Directors of the Corporation is of opinion that a proposed contract of insurance would impose upon the Corporation a liability for a term or in an amount in excess of that which the Corporation would normally undertake, and in the opinion of the Minister of Trade and Commerce it is in the national interest that the proposed contract be entered into. Under Sect. 21A of the Act, the Corporation may be authorized by the Government to provide financing in respect of an export transaction. Such financing is available only in cases where extended credit terms in excess of five years are involved.

Industrial Development Branch.—This Branch co-ordinates the assistance offered by the Federal Government in the establishment and expansion of industries in Canada. In this capacity, it works closely with other federal agencies and with industrial development departments of the provinces. In addition, the Branch maintains close working arrangements with a wide-spread network of organizations throughout Canada, including municipalities, railways, banks, power companies, chambers of commerce, boards of trade and the Canadian Manufacturers' Association.

Information and guidance are provided on a multiplicity of matters related to industrial development. The Branch acts in an advisory capacity for Canadian manufacturers, processors and associated service establishments. It also aids established firms desiring to diversify into new lines of production. Inquiries from foreign firms and individuals regarding the manufacture of products in Canada under licence or royalty are screened and brought to the attention of Canadian manufacturers interested in producing additional items.

International Trade Relations Branch.—The International Trade Relations Branch deals with a wide variety of current trade issues including analysis of developments in international commercial relations and assistance in maintaining and further improving the access for Canadian goods in foreign markets. The Branch endeavours to find practical solutions for tariffs and other difficulties encountered by Canadian exporters. It has under constant review Canada's trading relations with other countries, and participates in conferences and negotiations under the General Agreement on Tariffs and Trade In addition, the Branch is concerned with work being done in the trade field by other international organizations.

The Branch has a major responsibility for the administration of Canada's existing trade agreements and is responsible for the preparation of material for trade and tariff negotiations with other countries. Information is maintained on foreign tariffs, customs legislation, taxes affecting trade, import licensing, exchange regulations, documentation, sanitary regulations, marking and labelling requirements, and measures pertaining to quotas, embargoes, and other import restrictions. This information is made available to exporters, government officials and others interested in these regulations as they affect Canadian export trade. The assistance of the Branch is available to exporters in dealing with difficulties resulting from the trade policies or regulations of other countries.

Trade Publicity Branch.—The principal function of the Trade Publicity Branch is to promote trade between Canada and other countries in the publicity field. It furnishes the commercial community of Canada with information concerning the assistance that exporters and importers may obtain from the Department of Trade and Commerce. The Branch is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to sources of supply for raw materials and consumer goods unobtainable in Canada.

Its principal information medium is *Foreign Trade*, fortnightly publication of the Foreign Trade Service, in which are reproduced reports of Canadian trade commissioners on conditions in their respective territories, articles by Head Office personnel, commodity notes, foreign exchange rates, the itineraries of trade commissioners on tour in Canada, and trade and tariff regulations. A list of trade offices throughout the world is published once a month, and a directory of Head Office at periodic intervals.

Press releases are prepared and distributed to newspapers at home, and material of a similar character is dispatched to Canadian trade commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The promotional work of this Branch is supported by moderate advertising at home and abroad through the daily press, periodicals and trade papers, and by films and radio.

Trade promotion, through the medium of trade fairs in other lands, is the responsibility of a Division in this Branch, which maintains close liaison with other branches of the Department and agencies of government and prepares information for consideration by the Committee on Trade Fairs Abroad.

Trade Commissioner Service.—The Trade Commissioner Service is the overseas arm of the Department and is actively engaged in the promotion of Canadian trade and the protection of Canada's commercial interests; 63 offices are maintained in 49 countries.

The prime function of the trade commissioners is to stimulate Canada's export trade. In so doing, every effort is made to bring Canadian exporters and prospective buyers together. On their own initiative, and in response to requests from the Department and Canadian businessmen, they study potential markets for specific Canadian commodities and services. Reports are provided on the demand in the country concerned, prices, competition, trade and exchange regulations, tariffs, shipping and packaging requirements, credit terms, channels of distribution, labelling regulations, etc. Inquiries from local businessmen for goods obtainable from Canada are forwarded to the Department in Ottawa, or directly to Canadian firms in a position to supply the products required.

The supervision of Canadian exhibits at overseas trade fairs and the provision of assistance to participating Canadian firms is an important function of many offices. Trade commissioners make local arrangements for and travel with Canadian trade missions visiting overseas markets. They also seek sources of supply for a wide variety of goods on behalf of Canadian importers.

In developing trade opportunities, Canada's trade commissioners travel extensively in their territories, visit leading industrial and commercial centres, call on government officials, businessmen, trade associations and municipal authorities in an effort to arouse interest in Canadian products. They establish social contacts with commercial interests, thereby developing goodwill for Canada and Canadian products, while creating connections for Canadian exporters and facilitating the collection of trade information. They return to Canada at periodic intervals and make tours of Canadian industrial and commercial centres. Such direct contacts enable them to discuss specific problems with businessmen and bring into focus the Canadian commercial scene. Trade commissioners report to the Department and advise Canadian firms on economic conditions and trade opportunities in their respective territories. Many reports are published in *Foreign Trade*, and provide Canadian businessmen with a wealth of commercial intelligence.

In countries where Canada has a diplomatic mission, the Canadian trade office is the commercial division and the trade commissioner has the rank of Minister (Commercial), Minister-Counsellor (Economic), Commercial Counsellor or Commercial Secretary. When attached to a consulate, he carries the title of Deputy Consul General (Commercial), Consul (Commercial), or Vice-Consul (Commercial), according to his rank, in addition to that of Trade Commissioner. He may also be the Consul General, in charge of the office. Where trade offices are detached, and do not form part of a diplomatic mission, the trade commissioner may also be required to undertake consular, immigration and other duties as the sole representative of Canada.

CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT MAR. 1, 1961

ARGENTINA.—Commercial Counsellor, Canadian Embassy, Bartolome Mitre 478, Buenos Aires.

AUSTRALIA.—
- Sydney: Commercial Counsellor, 7th Floor, Berger House, 82 Elizabeth Street, Sydney, N.S.W.
- Melbourne: Commercial Counsellor, Mobil Centre, 2 City Road, South Melbourne.
- Canberra: Commercial Secretary, Office of the High Commissioner for Canada, State Circle, Canberra.

AUSTRIA.—Commercial Counsellor, Opernringhof, Opernring 1, Vienna 1. Territory includes Bulgaria, Czechoslovakia, Hungary, Romania and Yugoslavia.

BELGIUM.—Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels. Territory includes Luxembourg.

BRAZIL.—
- Rio de Janeiro: Commercial Counsellor, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro.
- São Paulo: Consul and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo.

CEYLON.—Commercial Secretary, Office of the High Commissioner for Canada, 6 Gregory's Road, Cinnamon Gardens, Colombo.

CHILE.—Commercial Secretary, Canadian Embassy, 5th Floor, Agustinas 1225, Santiago.

COLOMBIA.—Commercial Secretary and Consul, Canadian Embassy, Edificio Banco de Los Andes, Carrera 10, No. 16–92, Bogota. Territory includes Ecuador.

CONGO.—Canadian Consulate General, Forescom Bldg., Leopoldville 1. Territory includes Angola, Central African Republic, Chad, Congo, Gabon.

CUBA.—Commercial Secretary, Canadian Embassy, Edificio Ingenieros Civiles, Calle 17 y O Vedado, Havana, Cuba.

DENMARK.—Commercial Counsellor, Canadian Embassy, Prinsesse Maries Allé 2, Copenhagen. Territory includes Greenland and Poland.

Dominican Republic.—Commercial Counsellor, Canadian Embassy, Edificio Copello 408, Calle El Conde, Ciudad Trujillo. Territory includes Puerto Rico.

France.—Commercial Counsellor, Canadian Embassy, 35 Ave. Montaigne, Paris 8e. Territory includes Algeria, Cameroon Republic, Dahomey, Guinea, Ivory Coast, Mauretania, Morocco, Niger, Togoland and Volta.

Germany.—
Bonn: Commercial Counsellor, Canadian Embassy, 22 Zitelmannstrasse, Bonn.
Hamburg: Consul General, Canadian Consulate General, 69 Ferdinandstrasse, Hamburg.

Ghana.—Commercial Secretary, Office of the High Commissioner for Canada, E115/3 Independence Ave., Accra. Territory includes Gambia, Liberia and Sierra Leone.

Greece.—Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens. Territory includes Cyprus, Israel and Turkey.

Guatemala.—Canadian Government Trade Commissioner, 5 Avenida, 10–68, Zone I, Guatemala City. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.

Haiti.—Chargé d'Affaires *ad interim* and Consul, Canadian Embassy, Route du Canape Vert, St. Louis de Turgeau, Port au Prince.

Hong Kong.—Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Bldg., Hong Kong. Territory includes Cambodia, Communist China, Laos, Viet Nam, Macao.

India.—
New Delhi: Commercial Counsellor, Office of the High Commissioner for Canada, 13 Golf Links Area, New Delhi.
Bombay: Canadian Government Trade Commissioner, Gresham Assurance House, Mint Road, Bombay.

Indonesia.—Commercial Division, Canadian Embassy, Djl. Budi Kemuliaan No. 6, Djakarta.

Iran.—Commercial Counsellor, Canadian Legation, 32 Anatole France, Tehran.

Ireland.—Commercial Secretary for Canada, 66 Upper O'Connell St., Dublin.

Italy.—Commercial Counsellor, Canadian Embassy, Via G. B. de Rossi 27, Rome. Territory includes Libya and Malta.

Japan.—Commercial Counsellor, Canadian Embassy, Tokyo. Territory includes Korea.

Lebanon.—Commercial Secretary, Canadian Embassy, Alpha Building, Rue Clemenceau, Beirut. Territory includes Iraq, Jordan, Persian Gulf Area and Syrian region of the United Arab Republic.

Mexico.—Commercial Secretary, Canadian Embassy, Melchor Ocampo 463, 7th Floor, Mexico 5, D.F.

Netherlands.—Commercial Counsellor, Canadian Embassy, Sophialaan 5-7, The Hague.

New Zealand.—Commercial Counsellor, Office of the High Commissioner for Canada, Government Life Insurance Bldg., Wellington. Territory includes Fiji, Samoa, French Oceania, Tahiti and Tonga.

Nigeria.—Commercial Counsellor, Office of the High Commissioner for Canada, 4th Floor Barclays Bank Bldg., 40 Marina Rd., Lagos. Address for letters: P.O. Box 851.

Norway.—Commercial Counsellor, Canadian Embassy, Fridtjof Nansens Plass 5, Oslo. Territory includes Iceland.

Pakistan.—Commercial Counsellor, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Territory includes Afghanistan.

Peru.—Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Territory includes Bolivia.

Philippines.—Consul General and Trade Commissioner, Canadian Consulate General, L & S Bldg., 3rd Floor, 1414 Dewey Blvd., Manila. Territory includes Republic of China (Taiwan).

PORTUGAL.—Commercial Counsellor, Canadian Embassy, Rua Marques de Fronteira, No. 8-4° D°, Lisbon. Territory includes Azores, Cape Verde Islands, Madeira and Portuguese Guinea.

RHODESIA AND NYASALAND, FEDERATION OF.—Canadian Government Trade Commissioner, 8th Floor, Grindlays Bank Chambers, Baker Avenue, Salisbury. Territory includes Kenya, Seychelles Islands, Tanganyika, Uganda and Zanzibar.

SINGAPORE.—Canadian Government Trade Commissioner, Rooms, 4, 5 and 6, American International Bldg., Robinson Road and Telegraph St., Singapore. Territory includes Brunei, Burma, Federation of Malaya, North Borneo, Sarawak and Thailand.

SOUTH AFRICA.—
- Johannesburg: Canadian Government Trade Commissioner, Mutual Bldg., 17th Floor, Corner Rissik and De Villiers Sts., Johannesburg.
- Cape Town: Canadian Government Trade Commissioner, 602 Norwich House, The Foreshore, Cape Town.

SPAIN.—Commercial Counsellor, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio Muni and Rio de Oro.

SWEDEN.—Commercial Counsellor, Canadian Embassy, Strandvagen, 7-C, Stockholm. Territory includes Finland.

SWITZERLAND.—Commercial Counsellor, Canadian Embassy, Kirchenfeldstrasse 88, Berne.

UNION OF SOVIET SOCIALIST REPUBLICS.—Commercial Counsellor, Canadian Embassy, 23 Starokonyushenny Pereulok, Moscow.

UNITED ARAB REPUBLIC (EGYPTIAN REGION).—Commercial Counsellor, Canadian Embassy, 6 Sharia Rouston Pasha, Garden City, Cairo. Territory includes Aden, Sudan, Ethiopia, Saudi Arabia and Yemen.

UNITED KINGDOM.—
- London: Minister (Commercial), Office of the High Commissioner for Canada, One Grosvenor Square, London W1.
- Liverpool: Canadian Government Trade Commissioner, Martins Bank Building, Water Street, Liverpool.
- Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George Street, Glasgow.
- Belfast: Canadian Government Trade Commissioner, 36 Victoria Square, Belfast.

UNITED STATES.—
- Washington: Minister-Counsellor (Economic), Canadian Embassy, 1746 Massachusetts Ave., N.W., Washington.
- New York City: Deputy Consul General (Commercial), Canadian Consulate General, 680 Fifth Ave., New York City.
- Boston: Consul and Trade Commissioner, Canadian Consulate General, 607 Boylston St., Boston 16.
- Chicago: Consul and Trade Commissioner, Canadian Consulate General, 111 North Wabash Avenue, Chicago.
- Detroit: Consul and Trade Commissioner, Canadian Consulate, 1139 Penobscot Building, Detroit.
- Los Angeles: Consul and Trade Commissioner, Canadian Consulate General, 510 West Sixth Street, Los Angeles.
- New Orleans: Consul and Trade Commissioner, Canadian Consulate General, 215-217 International Trade Mart, New Orleans.
- San Francisco: Consul General, Canadian Consulate General, 3rd Floor, Kohl Building, 400 Montgomery Street, San Francisco.
- Seattle: Consul General, Canadian Consulate General, The Tower Building, Seventh Avenue at Olive Way, Seattle.

URUGUAY.—Commercial Counsellor, Canadian Embassy, No. 1409 Avenida Agraciada, Piso 7°, Montevideo. Territory includes Paraguay and Falkland Islands.

VENEZUELA.—Commercial Counsellor, Canadian Embassy, Avenida La Estancia No. 10, Ciudad Comercial Tamanaco, Caracas. Territory includes Netherlands Antilles.

WEST INDIES.—
- Port-of-Spain: Commercial Secretary, Colonial Building, 72 South Quay, Port-of-Spain.
- Kingston: Canadian Government Trade Commissioner, Barclays Bank Building, King Street, Kingston.

Section 2.—The National Energy Board

The National Energy Board was established by the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the construction and operation of oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary or advisable in the public interest with regard to such matters. The Act also authorizes the extension of the export and import provisions to oil upon proclamation by the Governor in Council. The Board, which reports to the Minister of Trade and Commerce, consists of a Chairman, a Vice-Chairman and three other members.

The Act was given Royal Assent on July 18, 1959, the members were appointed by Order in Council on Aug. 10, 1959 and the Act came into force by proclamation on Nov. 2, 1959. The Act supersedes the Pipe Lines Act, formerly administered by the Board of Transport Commissioners for Canada, and the Exportation of Power and Fluids and Importation of Gas Act, formerly administered by the Standards Branch of the Department of Trade and Commerce. Provision was made in the new Act for the continuation or re-definition of authorizations issued under the two previous Acts, and in 1960 the Act was amended to extend the duration of licences to export power issued under the Exportation of Power and Fluids and Importation of Gas Act to give the National Energy Board additional time to hear applications for replacement licences.

In the interval between passage of the Act and its coming into force, the Board commenced organizing its staff and facilities, prepared its rules of practice and procedure and drafted for submission to the Governor in Council regulations relating to the export of gas and electricity. Such regulations, and the rules of practice and procedure, came into force concurrently with the proclamation of the Act on Nov. 2, 1959.

At the time of coming into force of the Act, there existed a substantial backlog of projects for the export of gas and for the construction of pipeline facilities to export such gas, which had accumulated during the period in which the Royal Commission on Energy was conducting its investigations and the subsequent period prior to the proclamation of the National Energy Board Act. Consequently, as soon as the Act was proclaimed, six applications for licences to export gas and four applications for certificates of public convenience and necessity respecting related pipeline facilities were made to the Board. At its first hearings commencing Jan. 5, 1960, the Board heard jointly these applications, namely:—

(1) Trans-Canada Pipe Lines Limited for certificates of public convenience and necessity under Part III and for licences under Part VI of the Act;

(2) Alberta and Southern Gas Company Limited, for a licence under Part VI of the Act;

(3) Alberta Natural Gas Company for a certificate of public convenience and necessity under Part III of the Act;

(4) Canadian-Montana Pipe Line Company for a certificate of public convenience and necessity under Part III and a licence under Part VI of the Act;

(5) Westcoast Transmission Company Limited for a licence under Part VI of the Act; and

(6) Niagara Gas Transmission Limited for a certificate of public convenience and necessity under Part III and a licence under Part VI of the Act.

Following its first report, issued in March 1960, the Board with the approval of the Governor in Council issued the licences and certificates referred to in items (1) to (5) and denied the application of Niagara Gas Transmission Limited. This company subsequently made a new application, which was approved following a public hearing in May. Also in May the Board heard applications for new licences in respect of previously established gas exports from Canadian-Montana Pipe Line Company and Gordon M. Plotke;

these were approved in June. To Sept. 1, 1960, the only other gas export application before the Board was an application by Texaco Exploration Company to export certain quantities of butane through the Trans Mountain oil pipeline for a short period in 1960 and 1961. This application was also approved.

In considering application for a gas export licence, the Board is required to satisfy itself that the quantity of gas to be exported does not exceed the surplus remaining after due allowance has been made for the reasonably foreseeable requirements for use in Canada having regard to the trends in the discovery of gas in Canada, and that the price to be charged by an applicant for gas exported by him is just and reasonable in relation to the public interest. Therefore, before the Board can dispose of any of these gas export licence applications, it has to estimate the actual and prospective reserves of gas in Canada and the probable demand in Canada for gas in order to arrive at an estimate of the surplus available for export. Then the Board must examine the economics of each project in detail.

In respect of oil pipelines, the only application heard by the Board was that of Interprovincial Oil Pipe Line Company for a certificate authorizing the construction of certain new pump stations and additional pumping capacity at existing stations on its pipeline. This application was heard in May and approved in June.

Under the transitional provisions of the Act, licences for the export of power issued under the Exportation of Power and Fluids and Importation of Gas Act deemed to have been issued under the National Energy Board Act. By the amendment to the National Energy Board Act previously mentioned, such licences, which would normally have expired on Mar. 31, 1960 were extended to Dec. 31, 1961 unless replaced before that time by a licence under the new Act. In October 1960, the first application for a licence to export power, that of Fraser Companies, Limited, was heard and the licence, containing conditions respecting tolerances, price and export agreements, was subsequently issued for a period of five years. Applications of The New Brunswick Electric Power Commission, the Maine and New Brunswick Electrical Power Company Limited, and The Hydro-Electric Power Commission of Ontario were also heard and were under consideration at the end of the year. During 1960, the Board completed the issuance of certificates for power export facilities already in use when the Board came into existence. Forty-one separate international power lines were certified at the year-end.

As part of the transition from the old statutes to the new, the Board is required to issue certificates of public convenience and necessity to oil and gas pipeline companies which had received from the Board of Transport Commissioners for Canada leave to construct facilities under the Pipe Lines Act. At the end of 1960, 11 of the 15 certificates required had been completed and issued and the remainder were in course of preparation.

During the year, the Board conducted special studies on several matters connected with energy forecasts in co-operation with other government departments and agencies. The position of Energy Counsellor was established in the Canadian Embassy at Washington at the request of various departments including the National Energy Board. Through the Energy Counsellor and by direct contact, the Board kept in touch with the proceedings and decisions of the Federal Power Commission and other United States agencies whose activities are relevant to those of the Board. In addition, liaison was maintained and further developed with the various provincial departments and agencies operating in the energy field. The Board also worked closely on certain special studies with the Department of Defence Production and the Department of Northern Affairs and National Resources. At the request of the latter, a study of the Canol Pipe Lines was undertaken and was continuing at the year-end.

Section 3.—The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments may be found.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates—British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a sea, lake or river port of Canada. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariffs, or under all Tariffs.

Valuation.—In general, the Customs Act, as amended effective Sept. 6, 1958, provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold "(*a*) to purchasers located at that place with whom the vendor deals at arm's length and who are at the same or substantially the same trade level as the importer, and (*b*) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions". In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit at least equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty may, in no case, be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

Dumping.—Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than the fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. *ad valorem*. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices.

---

* Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise Division, which administers the Customs Act and the Customs Tariff Act.

Drawback.—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.—The organization and functions of the Tariff Board are described at p. 103 of this volume.

Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Dec. 31, 1960

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements are as follows: Australia; the West Indies and the Bahamas, Bermuda, British Guiana and British Honduras; New Zealand; Federation of Rhodesia and Nyasaland; Union of South Africa; and the United Kingdom and Colonies. Preferences are accorded by Canada to India, Pakistan, Ghana and Nigeria. Tariff relations between Canada and Ceylon, Ghana, the Federation of Malaya and Cyprus are governed by the Canada–United Kingdom Agreement. These agreements and arrangements have been modified and supplemented by GATT.

Canada exchanges most-favoured-nation treatment with 38 countries under the General Agreement on Tariffs and Trade. These countries are shown in the list on pp. 1026-1033. In addition, Switzerland has acceded provisionally, and eight other countries participate in the work of GATT—Argentina, Cambodia, Israel, Poland, Portugal, Spain, Tunisia and Yugoslavia. The protocol of Provisional Application of the General Agreement on Tariffs and Trade was signed by Canada on Oct. 30, 1947 and brought the Agreement into force on Jan. 1, 1948.

GATT is a multilateral trade agreement providing for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties and laying down rules and regulations to govern the conduct of international trade. Under the system of multilateral tariff negotiations initiated under GATT, four general rounds of negotiations have taken place: at Geneva, Switzerland, in 1947; at Annecy, France, in 1949; at Torquay, England, in 1950-51; and again at Geneva in 1955-56. A fifth tariff conference opened in Geneva on Sept. 1, 1960. The tariff concessions Canada granted and received at the first Geneva Conference are described in the 1948-49 Year Book, pp. 875-877, and those negotiated at Annecy are discussed in the 1950 Year Book, pp. 968-970. The Torquay negotiations are discussed in the 1952-53 edition, pp. 996-997.

Canada already had most-favoured-nation trade agreements with a number of GATT members prior to the effective date of the General Agreement. These agreements with individual countries continue in force in conjunction with the General Agreement. As an exception, however, the Canada–U.S. Trade Agreement of 1938 is suspended for as long as both countries continue to be contracting parties to GATT.

Other arrangements include a trade agreement with the Republic of Ireland exchanging preferences and most-favoured-nation agreements, and other arrangements of a less formal nature with many countries not contracting parties to GATT.

Tariff and Trade Arrangements with Commonwealth Countries as at Dec. 31, 1960

Country	Agreement	Principal Terms
AUSTRALIA................	Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BRITISH CARIBBEAN: THE WEST INDIES (BARBADOS, JAMAICA, LEEWARD AND WINDWARD ISLANDS, TRINIDAD AND TOBAGO), BAHAMAS, BERMUDA, BRITISH GUIANA AND BRITISH HONDURAS.	Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. The British West Indies (except Jamaica), Bermuda, British Guiana and British Honduras participate in GATT.	The parties exchange specified tariff preferences. Agreement may be terminated on six months notice.
CEYLON....................	Relations continue to be governed by the Trade Agreement of 1937 between Canada and the United Kingdom. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.

Subsection 2. Municipal Revenue, Expenditure and Debt	1078

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Combined Statistics of Public Finance for All Governments

Combined statistics of public finance for all governments in Canada—federal, provincial and municipal—are presented in this Section. More detailed information for each level of government is given in Sections 2, 3 and 4. A special article covers the incidence of taxation in Canada at the three levels.

Combined Revenue and Expenditure.—Tables **1** and **2** give details of the federal, provincial and municipal net combined revenue by source and net combined current and capital expenditure by function, respectively, for 1957 and 1958. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables **1** and **2** in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

---

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

[1] Includes treasury bills having a term of two or more years.

[2] Includes treasury bills having a term of less than two years.

[3] Included in "Other direct liabilities".

[4] Excludes contingent liability in respect of Federal Government guarantee of deposits maintained by chartered banks in the Bank of Canada and miscellaneous guarantees the amounts of which were not finally determined or were indeterminate at the close of the fiscal year.

TAXATION IN CANADA*

Canada is a federal state with a central government and ten provincial governments. In 1867 the principal colonies of the British Crown in North America joined together to form the nucleus of a new nation and the British North America Act of that year became its written constitution. This statute created a central government with certain powers while continuing the existence of political subdivisions called provinces with powers of their own.

Under the British North America Act the Parliament of Canada has the right of raising "money by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the Province in order to the raising of a Revenue for Provincial purposes". Thus the provinces have a right to share only in the field of direct taxation while the Federal Government is not restricted in any way in matters of taxation. The British North America Act also empowered the provincial legislatures to make laws regarding "municipal institutions in the Province". This means that the municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, from a practical standpoint, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". In essence, this conception has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under the guidance of provincial legislation, tax real estate, water consumption, places of business and in some cases retail sales. The Federal Government levies direct taxes on income, on gifts, and on the estates of deceased persons and indirect taxes such as excise taxes, excise and customs duties, and a sales tax.

The increasing use by both the federal and provincial governments of their rights in the field of direct taxation in the 1930's resulted in uneconomic duplication and some severe tax levies. Starting in 1941, a series of tax agreements between the federal and provincial governments have been entered into under which the agreeing provinces have undertaken, in return for compensation, not to use or to permit their municipalities to use certain of the direct taxes. As a result of the most recent of these agreements, all provinces except Quebec have undertaken not to impose a personal income tax for the period 1957-62 and all provinces except Ontario and Quebec have undertaken for the same period not to impose taxes on corporations or successions. Consequently, the Province of Quebec is at present the only political subdivision in Canada levying its own personal income tax and Ontario and Quebec are the only jurisdictions imposing corporation income taxes, special corporation taxes and succession duties. (See also pp. 1067-1070.)

The fact that the Provinces of Ontario and Quebec have chosen to continue to impose income taxes and succession duties has not resulted in recent years in taxpayers in those provinces bearing a substantially heavier tax load than taxpayers in other provinces. As part of the current federal-provincial arrangements, the federal income tax and estate tax are abated by certain amounts in those provinces which also impose these taxes.

Federal Taxes

Individual Income Tax

Every individual who is a resident of Canada at any time during a year is liable for the payment of income tax for that year. In addition, every individual who is employed or carries on business in this country during a year is required to pay tax on the part of his taxable income earned in Canada. Canadian taxation practice is based to a large extent on the British experience. This is reflected particularly in the fact that taxation is on the basis of residence rather than citizenship, and in the tax freedom for capital gains. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also extensions of the meaning of Canadian resident to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the Armed Forces of Canada, or an ambassador, a high commissioner, or an officer or servant of Canada or of any one of its provinces.

---

* Prepared (in February 1961) by F. R. Irwin, Director, Taxation Division, Department of Finance, Ottawa. This article includes federal tax changes announced in the Supplementary Budget on Dec. 20, 1960, and provincial taxation *circa* April 1961; federal tax changes announced in the Budget of June 20, 1961 are outlined at p. 1051.

The Canadian tax law uses the concepts "income" and "taxable income". The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from all businesses, property, offices and employments. It does not include capital gains unless they arise out of the conduct of a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, fees, annuities, pension benefits, allowances, interest, alimony, maintenance payments and other miscellaneous sources of income. On the other hand, war service disability pensions paid by Canada or an ally of Her Majesty at the time of the war service, unemployment insurance benefits, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family allowances do not have to be included in the computation of income.

In computing his income, an individual who is carrying on business may deduct business expenses including depreciation (called capital cost allowances), interest on borrowed money, reserves for doubtful debts, contributions to employees' pension plans, bad debts, and expenses incurred for scientific research. In general, no deductions are allowed in computing income from salary and wages although there are exceptions—travelling expenses (of the employee who must travel in the performance of his work), union dues, alimony payments and contributions to registered pension plans. An individual may deduct, within limits, amounts set aside to provide future income under a registered retirement savings plan. A student in full-time attendance at a university or other post-secondary school may deduct his tuition fees.

Having computed his income, the individual then calculates his taxable income by deducting certain exemptions and deductions: for single status an exemption of $1,000; for married status an exemption of $2,000; for dependent children eligible for family allowance, $250; for other dependants (as defined in the law), $500; for a taxpayer over 65 years of age, an additional $500; and charitable donations up to 10 p.c. of income. Medical expenses that exceed 3 p.c. of income may be deducted up to a maximum of $2,500 for a single person, $3,000 for a married person, and $750 for each dependant, or a total of $3,000 for all dependants. In lieu of claiming deductions for charitable donations, medical expenses and membership dues in trade unions or professional societies, an individual may claim a standard deduction of $100.

As already stated, an individual who is resident in Canada for the whole year is taxed on his income from both inside and outside Canada. A non-resident who carries on business in Canada or who earns salary or wages in Canada is taxed on income earned in Canada. Such a non-resident may deduct that part of the exemptions and deductions which may reasonably be attributed to the income earned in Canada.* An individual who is resident in Canada for part of the year is subject to income tax in Canada on that part of his income received while he is resident in Canada; he also is permitted that part of the exemptions and deductions which may reasonably be considered as applicable to his period of residence in Canada.

A progressive schedule of rates is applied to taxable income, beginning at 11 p.c. on the first $1,000 of taxable income and increasing to 80 p.c. on taxable income in excess of $400,000. In addition, an old age security tax is levied on taxable income at the rate of 3 p.c. with a maximum of $90 reached at the level of $3,000.

---

* A non-resident who derives investment income from Canada is taxed in a different way, described on p. 1042.

In calculating the amount of his income tax, an individual is allowed tax credits under three main headings: (1) *Dividend Tax Credit*—to partially eliminate the double taxation of corporate profits and to encourage participation in the ownership of Canadian companies, a Canadian resident is allowed to deduct from his tax an amount equal to 20 p.c. of the net dividends he receives from Canadian taxable companies; (2) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income; and (3) *Provincial Tax Credit*—an individual liable for the payment of a provincial income tax may claim an abatement of 13 p.c. of his federal tax otherwise payable on that part of his income subject to the provincial levy.

To a very large extent, individual income tax is payable as the income is earned. A taxpayer in receipt of salary or wages has his tax deducted from his pay by his employer and in this way pays nearly 100 p.c. of his tax liability during the calendar year. The remainder, if any, is payable at the time of filing the tax return before Apr. 30 of the following year. A taxpayer receiving more than 25 p.c. of his income from sources other than salary or wages must pay tax by quarterly instalments throughout the year. His return must also be filed before Apr. 30 of the following calendar year.

The following statement shows what taxpayers pay at various levels of income. In calculating these taxes it has been assumed that all taxpayers take the standard deduction of $100. No allowance has been made for the 20-p.c. dividend tax credit. Also, these taxes apply throughout Canada except in the Province of Quebec. A Quebec taxpayer has his federal tax reduced by 13 p.c. because Quebec also imposes an income tax on individuals.

Status	*Income*	*Income Tax*	*Old Age Security Tax*

Corporation Income Tax

The Income Tax Act levies a tax upon the income, from everywhere in the world, of corporations resident in Canada and upon the income attributable to operations in Canada of non-resident corporations carrying on business in Canada.

In computing income, a corporation may deduct operating expenses, including municipal real estate taxes, and also reserves for doubtful debts, bad debts and interest on borrowed money. It may not deduct provincial income taxes other than provincial taxes on income derived from mining and logging operations. For this purpose "income from mining operations" and "income from logging operations" are specially defined. Regulations issued under authority of the Income Tax Act permit the deduction of capital cost allowances (depreciation). A corporation engaged in mining or oil and gas production may also deduct depletion allowances.

The regulations covering capital cost allowances permit the taxpayer to deduct over a period of years the actual capital cost of all depreciable property. The yearly deductions of capital cost allowances are computed on the diminishing balance principle (taxpayers engaged in farming and fishing may choose between this and the straight line method). Published regulations establish a number of classes of property and maximum rates. There is provision for recapture of any amount allowed in excess of the ultimate net capital cost of any asset.

A taxpayer operating a mine, oil well or gas well is allowed a depletion allowance, usually computed as a percentage of profits, which continues as long as the mine or well is in operation. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets used by the taxpayer. In respect of timber limits, the taxpayer receives an annual allowance sometimes called a depletion allowance. This is a rateable proportion of the amount invested in the limit and when that amount has been recovered no further allowance is given.

In computing taxable income, a corporation may deduct dividends received from other Canadian taxpaying corporations and also from foreign corporations in which the Canadian corporation has at least a 25-p.c. stock ownership. Business losses may be carried back one year or forward five years and deducted in computing taxable income. A corporation may also deduct donations to charitable organizations up to a maximum of 10 p.c. of its income.

The general rates of tax on corporate taxable income are 18 p.c. on the first $35,000 of taxable income plus 47 p.c. on taxable income in excess of $35,000. A corporation deriving more than one-half of its gross revenue from the sale of electric energy, gas or steam pays tax on its taxable income from such sources at the rate of 18 p.c. on the first $35,000 of taxable income plus 45 p.c. on taxable income in excess of $35,000.

A corporation that qualifies as an investment company pays a tax of 18 p.c. on its taxable income. In addition, every corporation pays an old age security tax of 3 p.c. of taxable income bringing its rates up to 21 p.c. and 50 p.c. (21 p.c. and 48 p.c. for a public utility company and 21 p.c. for an investment company).

In calculating the amount of income tax, a corporation is allowed tax credits under two headings: (1) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income; and (2) *Provincial Tax Credit*—a corporation may deduct from its federal tax otherwise payable a tax credit equal to a fixed percentage of its taxable income attributable to operations in a province which imposes its own provincial corporation income tax. Only the Provinces of Ontario and Quebec at present impose their own corporation income tax. The amount of the credit is 9 p.c. of taxable income attributable to operations in Ontario and 10 p.c. of taxable income attributable to operations in Quebec. The higher credit with respect to taxable income earned in Quebec is attributable to a special arrangement whereby federal grants to universities in that province are replaced by provincial grants financed by an additional 1-p.c. tax levied by the province on corporation profits earned in Quebec.

A corporation is required to pay its taxes (combined income and old age security taxes) in monthly instalments. In each of the last six months of its fiscal year and the three months following the end of its fiscal year, it must pay one-twelfth of its estimated tax for the year. The estimate of the amount payable may be based on the taxable income of the previous year or the estimated taxable income of the year in progress. In each of the following two months, it pays one-third of the estimated balance of the tax computed by reference to the income of the taxation year. In the sixth month following the end of the fiscal year, the final return must be filed and the remainder of the tax paid for that year.

Taxation of Non-residents

A non-resident is liable to the payment of income tax if he was employed or was carrying on business in Canada during a taxation year. The expression "carrying on business in Canada" includes maintaining a permanent establishment in Canada, processing goods even partially in Canada, and entering into contracts in Canada.

The taxable income of a non-resident individual is taxed under the same schedule of rates as Canadian resident individuals. Non-resident corporations deriving income from carrying on business in Canada are taxed on their taxable income attributable to operations in Canada at the same corporation income tax rates as Canadian resident corporations. In addition, the profits remaining after subtracting the federal and provincial corporation income taxes and an allowance in respect of net capital investment in property in Canada during the year are subject to a special 15-p.c. tax commencing Jan. 1, 1961. (Tax treaties with some countries provide certain exemptions from tax for remuneration for services performed in this country by residents or employees of the other country.)

Furthermore, the Income Tax Act provides for a tax at the rate of 15 p.c. on certain forms of income going from Canada to non-resident persons or corporations. It applies to interest, dividends, rentals, royalties, income from a trust or estate, and alimony. This 15-p.c. tax applies whether the income goes to non-resident individuals or corporations. (The rate on royalties on motion picture films is 10 p.c.) This tax is withheld at the source by the Canadian payer. It is an impersonal tax levied without regard to the status or other income of the non-resident recipient. Non-residents who receive only this kind of income from Canada do not file tax returns in Canada.

Gift Tax

The Income Tax Act levies a tax upon gifts. The rates range from 10 p.c. on an aggregate taxable value of $5,000 or under, to 28 p.c. on an aggregate taxable value of over $1,000,000. Exemptions include complete exemption of gifts of $1,000 or less and a general deduction of $4,000 from aggregate taxable value of gifts in the year.

Estate Tax

This tax applies to property passing, or deemed to pass, at death. All the property of persons who were domiciled in Canada before their death must be taken into consideration no matter where that property is situated; for persons dying domiciled outside of Canada, only their property situated in Canada is subject to tax.

In computing the tax of a Canadian domiciliary, the value of the whole estate is first determined. Once the aggregate value of the estate has been determined, estate debts and certain expenses may be deducted. From the resulting "aggregate net value" there may be deducted the amount of a basic exemption, which is increased where the deceased leaves a widow or dependent child, and also the amount of any charitable bequests to charitable organizations in Canada. After these deductions the amount left is the "aggregate taxable value" to which is applied the tax rates. From the tax so calculated may be deducted: (1) a tax abatement in respect of property situated in a province that levies a succession duty; (2) a credit for gift tax paid on recent gifts the amount of which is included in the aggregate net value of the estate; and (3) a credit for foreign taxes.

No estate valued at less than $50,000 is subject to estate tax. This $50,000 is not an exemption but it is the starting point for tax. The estate tax must not reduce the value of an estate after tax to less than $50,000. The basic deductible exemption which applies to all estates of Canadian domiciliaries is $40,000. This basic exemption of $40,000 is increased to $60,000 in respect of a deceased male survived by a spouse, or in respect of a deceased female survived by an incapacitated spouse and a dependent child. In both cases, there is an additional exemption of $10,000 for each surviving dependent child (under 21). Finally, the basic exemption of $40,000 is increased by $15,000 for every surviving dependent child orphaned by the death of the deceased.

The tax on the estates of Canadian domiciliaries is calculated by applying a graduated scale of rates. For an aggregate taxable value of $5,000 or less, the rate is 10 p.c. For an aggregate taxable value of $100,000, the basic amount is $19,000 plus 24 p.c. of any amount between $100,000 and $150,000. At $2,000,000 of taxable value, the tax is $816,500 and the excess over $2,000,000 is chargeable at the highest rate of 54 p.c. A complete rate schedule is given in Sect. 8 of the Act.

As already stated, there is an abatement from federal estate taxes otherwise payable, in respect of provincial succession duties. Generally, the abatement is a deduction of 50 p.c. from the federal tax otherwise payable in respect of property situated in a province that levies succession duties.

The property situated in Canada of a deceased person not domiciled in Canada is subject to estate tax at a flat rate of 15 p.c. There is no deduction allowed against the assessed value of such property except for debts specifically chargeable to it. However, there is a special provision which exempts all such property of less than $5,000 value and which also provides that the value of the property is not reduced by the tax to less than $5,000. The 50-p.c. abatement referred to above also applies to this tax on property of deceased persons not domiciled in Canada where that property is subject to provincial duties.

Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes, both of which are levied on goods imported into Canada and on goods produced in Canada. They are not levied on goods exported.

General Sales Tax.—An 8-p.c. sales tax is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid value of goods imported into Canada. (For alcoholic beverages and tobacco products, the sale price for purposes of the sales tax includes excise duties levied under the Excise Act.) An old age security tax of 3 p.c. is levied on the same basis as the 8-p.c. tax bringing the total sales tax to 11 p.c.

Many classes of goods are exempt from sales tax. One important category is comprised of machinery and apparatus used in the process or manufacture or production of goods. The equipment to be exempt must enter directly into production. To illustrate, a stamping or cutting machine used in a factory is exempt from sales tax while office equipment or delivery equipment used by the same manufacturer is not. This exemption was established to reduce to a minimum the effect of the tax as a cost of production. Similarly, most equipment used by farmers, fishermen, loggers and mining companies is also exempt. Most building materials, foodstuffs, and fuels for lighting or heating are exempt from the tax as well as articles and materials used by public hospitals. The products of farms, forests, mines and fisheries are to a large extent exempt. Finally a variety of items is made exempt from sales tax when purchased by municipalities for prescribed uses. These and other exemptions are set forth in schedules to the Excise Tax Act.

Special Excise Taxes.—The Excise Tax Act also provides for a number of special excise taxes which are in addition to the sales tax. Where these are *ad valorem* taxes they are levied on exactly the same price or duty-paid value as the general sales tax. Articles subject to special excise taxes include automobiles, jewellery, cosmetics, toilet articles, radios, record players and television sets. Tobacco products and wines are also taxed under the Excise Tax Act.

Special excise taxes now levied are listed as follows:—

Automobiles, for passenger use	7½ p.c. ad valorem
Cigarettes	2½ cents per 5 cigs.
Cigars	15 p.c. ad valorem
Jewellery, including clocks, watches, jewellery, articles of ivory, amber, shell, precious or semi-precious stones, goldsmiths' and silversmiths' products except gold-plated or silver-plated ware for the preparation or serving of food or drink	10 p.c. ad valorem
Lighters	10 p.c. ad valorem
Playing cards	20 cents per pack
Radios, phonographs, television sets and tubes	15 p.c. ad valorem
Slot machines—coin, disc, or token operated games or amusement devices	10 p.c. ad valorem
Matches	10 p.c. ad valorem
Tobacco—pipe tobacco, cut tobacco and snuff	80 cents per lb.
Tobacco pipes, cigar and cigarette holders and cigarette rolling devices	10 p.c. ad valorem
Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc.	10 p.c. ad valorem
Wines—*	
Wines of all kinds containing not more than 7 p.c. of absolute alcohol by volume	25 cents per gal.
Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit	50 cents per gal.
Sparkling wines	$2.50 per gal.
Premiums of British or foreign insurance companies not authorized to transact business in Canada (not including marine insurance)	10 p.c. of net premium.

---

* These taxes apply only to wines manufactured in Canada. The customs tariff on imported wines includes a levy to correspond to these taxes on domestic production.

All the above items, with the exception of premiums of insurance companies, are also subject to the general sales tax of 8 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco are subject to further taxes under the Excise Act (referred to as excise duties).

Excise Duties

The Excise Act levies taxes (referred to as excise duties) upon alcohol, alcoholic beverages and tobacco products produced in Canada. These duties are not levied on imported goods but the customs tariff on these products includes a levy to correspond to the duties levied on domestic production. These duties are not levied on goods exported.

Spirits.—The duties are on a per-gallon basis in proportion to the strength of proof of the spirits. These duties do not apply to denatured alcohol intended for use in the arts and industries, or for fuel, light or power, or any mechanical purpose. The various duties are as follows:—

On every gallon of the strength of proof distilled in Canada	$13.00
On every gallon of the strength of proof used in the manufacture of—	
Medicines, extracts, pharmaceutical preparations, etc., per gallon	$ 1.50
Approved chemical compositions, per gallon	15 cents
Spirits sold to a druggist and used in the preparation of prescriptions, per gallon	$ 1.50
Imported spirits when taken into a bonded manufactory in addition to other duties, per gallon	30 cents.

Canadian Brandy.—Canadian brandy is a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials. It is subject to a duty of $11 per gallon.

Beer.—All beer or other malt liquor is subject to a duty of 38 cents per gallon.

Tobacco, Cigars and Cigarettes.—The excise duties make up nearly as large a part of the total tax on tobacco products as the special excise taxes described on pp. 1043-1044. The rates of duty are as follows:—

On manufactured tobacco of all descriptions, except cigarettes, per pound	35 cents
Cigarettes weighing not more than two and one-half pounds per thousand (nearly all of the cigarettes used in Canada are of this type), per thousand	$ 4.00
Cigarettes weighing more than two and one-half pounds per thousand, per thousand	$ 5.00
Cigars, per thousand	$ 2.00
Canadian raw leaf tobacco when sold for consumption, per pound	10 cents.

Combined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act gives the following total taxes:—

Cigarettes	$9.00 per thousand (or 18 cents per pack of 20 cigarettes) plus the 11-p.c. sales tax on the manufacturer's sale price
Manufactured tobacco	$1.15 per pound plus the 11-p.c. sales tax on the manufacturer's sale price
Cigars	$2.00 per 1,000 plus the 15-p.c. special excise tax and the 11 p.c. sales tax on the manufacturer's sale price.

Customs Duties*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties, once the chief source of revenue for the country, have declined in importance to the point where they now provide about 10 p.c. of the total. Quite apart from its revenue aspects, however, the Tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates—British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly to Canada from countries within the British Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but are not entitled to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the British Preferential or Most-Favoured-Nation treatment. Few countries are in this category and, in terms of trade coverage, are negligible.

---

* See also pp. 1024-1025.

Where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates that apply on any particular item may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. As previously mentioned, only the Provinces of Ontario and Quebec impose income taxes and special taxes on corporations and they also are the only provinces taxing property passing on death. Only the Province of Quebec imposes a personal income tax. The provinces that do not impose these direct taxes receive payments from the Federal Government to compensate them for sharing these tax fields. In addition, there is an arrangement under which the Federal Government makes payments to all the provinces except Ontario in recognition of the fact that the potential tax revenue from the fields of income tax and succession duties in those provinces, measured on a per capita basis, is lower than an agreed-upon level. Some of the more important provincial levies are reviewed briefly below.

Alcoholic Beverage Taxes

Generally speaking, the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over this commodity. The provincial mark-up over the manufacturer's price is the effective means of taxation. Beer and wine may be sold by retailers or government stores depending on the province but in all cases they bear a provincial tax.

Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. Seven provinces—Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Saskatchewan and British Columbia—now (April 1961) levy this type of tax at rates varying between 2 p.c. and 5 p.c. Ontario has announced its intention of imposing a retail sales tax of 3 p.c. commencing Sept. 1, 1961.

Amusement Taxes

Each of the provinces, with the exception of Alberta and Saskatchewan, has a tax on admission to places of entertainment. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 13 p.c. Alberta imposes a pari-mutuel tax of 5 p.c.

Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces has imposed a tax on the purchase of gasoline by motorists and truckers. The rates vary from 12 cents per gallon in Alberta to 19 cents in Nova Scotia and Newfoundland. The diesel commercial road tax varies from 14 cents per gallon in Alberta to 24 cents in Nova Scotia. Ontario imposes a tax of 13 cents on gasoline and

18½ cents on diesel fuel, Saskatchewan a tax of 14 cents on gasoline and 17 cents on diesel fuel, and Alberta a tax of 12 cents on gasoline and 14 cents on diesel fuel. No provincial taxes are imposed on fuel oil for heating purposes.

Motor Vehicle Licences and Fees

Each province levies a fee on the annual registration of motor vehicles. This registration is compulsory and each vehicle is issued with licence plates for the year. The rates of this fee vary from province to province; the amount to be paid may be assessed in relation to the weight of the car, the number of cylinders of the engine, the wheel base, or at a flat rate. The operator or the driver of a motor vehicle must also register annually and pay a fee for a new driver's licence; in Alberta, drivers' licences must be renewed every five years at a cost of $5.

Taxes on Mining Operations

Seven of the ten provinces levy a tax on the income from mining operations of individuals, partnerships, associations or corporations engaged in this activity. The rates are as follows:—

Newfoundland	20 p.c. on iron ore; 5 p.c. on all other
New Brunswick	7 p.c. on excess over $10,000; 9 p.c. on excess over $5,000,000
Quebec	4 p.c. on excess over $10,000; 7 p.c. on excess over $3,000,000
Ontario	6 p.c. on excess over $10,000; 11 p.c. on excess over $1,000,000; 12 p.c. on excess over $5,000,000
Manitoba	8 p.c. on excess over $10,000
Saskatchewan	12½ p.c. on all mining operations after a three-year royalty-free period
British Columbia	10 p.c. on excess over $25,000.

The Province of Nova Scotia imposes a tax on income from gypsum mining and the Provinces of Saskatchewan, Manitoba and Newfoundland impose a tax on the assessed value of minerals and a flat rate per acre of land. Alberta levies a tax on the assessed value of minerals in producing areas and a small acreage tax on freehold minerals.

Taxes on Logging Operations

The Provinces of British Columbia and Ontario levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In British Columbia the tax is 10 p.c. on income in excess of $25,000 and in Ontario the rate is 9 p.c. on income in excess of $10,000.

Capital Taxes

The Province of Quebec imposes a tax of 1/10th of 1 p.c. on paid-up capital of corporations while Ontario levies a similar tax at the rate of 1/20th of 1 p.c.

Place-of-Business Taxes

The Provinces of Quebec and Ontario have a place-of-business tax. In Quebec the tax ranges from $20 to $50 for each place of business with the higher amounts being levied in the cities of Montreal and Quebec. In Ontario, the tax for each permanent establishment is the lesser of $50 or 1/20th of 1 p.c. of paid-up capital of the corporation involved, but the total of the capital tax and the place-of-business tax cannot be less than $20. Ontario also imposes an office tax of $50 on every corporation that does not maintain a permanent establishment in the province but merely maintains a buying office, or merely holds certain provincial licences, or merely holds assets, or is represented by a resident employee or agent who is not deemed to operate a permanent establishment of the corporation.

Both provinces levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies and sleeping-car, parlour-car and dining-car companies. In Ontario these special taxes and the capital and place-of-business taxes mentioned above are payable only to the extent that they exceed the corporate income tax otherwise payable.

Land Transfer Taxes

The Provinces of Alberta and Ontario levy a tax based on the price at which ownership to land is transferred. In Alberta the rate is 1/5th of 1 p.c. up to $5,000 and 1/10th of 1 p.c. over $5,000; in Ontario a straight 1/5th of 1 p.c. tax is imposed. In Alberta the tax is in the form of a registration fee and, in addition, an assurance fee of 25 cents per $1,000 is charged. In Quebec a tax of 2½ p.c. of the purchase price is imposed only when property is transferred under the Bankruptcy or Winding-Up Acts.

The Provinces of British Columbia, Saskatchewan and Manitoba do not have a land transfer tax but have an equivalent in the land title fees which are based on land values.

Taxes on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in both provinces are:—

Shares sold, transferred or assigned, valued at—	
Under $1	1/10th of 1 p.c. of value
$ 1 to $ 5	1/4 cent per share
$ 5 to $ 25	1 cent per share
$25 to $ 50	2 cents per share
$50 to $ 75	3 cents per share
$75 to $150	4 cents per share
Over $150	4 cents per share plus 1/10th of 1 p.c. of value in excess of $150
Bonds and debentures	3 cents for every $100 or fraction thereof of par value.

Taxes on Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies derived from business transacted within the province.

Corporation Income Taxes

Only the Provinces of Ontario and Quebec levy corporation income taxes. The Province of Ontario imposes a tax of 11 p.c. on taxable income earned in Ontario. Under the Corporation Tax Act of Ontario, the determination of taxable income and the allocation of taxable income between Ontario and other jurisdictions follow the federal rule which gives equal weight to sales made and wages paid within the province.

Corporations that maintain an office or carry on business in the Province of Quebec are liable to a provincial tax at the rate of 12 p.c. on taxable income attributable to operations in the province. Effective Jan. 1, 1961, where a corporation operates both inside and outside Quebec, the allocation of corporate income to operations in Quebec is based on the sales–salaries and wages formula applicable under the Ontario Act, so that, generally speaking, the effect of corporation income tax allocation is now the same throughout the country. In general, taxable income in Quebec is computed in a manner similar to that for federal taxable income.

Succession Duties

Only the Provinces of Ontario and Quebec levy succession duties, which constitute a tax upon the right to succeed to property and are assessed upon the interest or benefit passing at death to an heir or beneficiary.

Both Ontario and Quebec impose succession duties on all property situated in the province belonging to the deceased and passing at his death whether the deceased was domiciled in the province or elsewhere. Personal property wherever situated of a person dying domiciled within the province is also liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are governed by the value of the estate, the relationship of the beneficiary to the deceased and the amount going to any one person. The rate of tax increases as the degree of relationship between the deceased and his successor becomes more remote.

Personal Income Taxes

Only the Province of Quebec imposes a personal income tax. Residents of Quebec are liable to tax on their income from all sources. Non-residents of the province who are employed or carrying on business therein are liable for tax on that portion of their income earned in the province. The personal exemptions are: single individual, $1,000; married, no children, $2,000; each child under 16 years of age, $250; all other dependants, $500 each.

The Quebec Income Tax Act is closely patterned after the federal Income Tax Act. It contains similar provisions regarding dividend tax credits, medical expenses and charitable donations. Like its federal counterpart, it uses a graduated rate scale. From 2.5 p.c. on the first $1,000 of taxable income, the rates increase to a maximum of 13.2 p.c. on the excess over $400,000.

Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes, at varing rates according to class, for provincial revenue. Improved, forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at ½ of 1 p.c.; wild land at 3 p.c.; coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at 1½ p.c.

Municipal Taxation

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value. The revenues from such taxes are used to pay for street maintenance, schools, police and fire protection and other community services. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property such as sidewalks, roads and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied depending on the municipality.

In addition, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan, municipalities are empowered to levy an amusement tax on the admission of persons to places of amusement. This practice differs from that of the other provinces where the amusement tax is generally a provincial preserve. Electricity and gas are taxed at the consumer level in some western municipalities while coal and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal while certain Ontario municipalities impose a tax on the gross receipts of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. Three bases of assessment are in use—a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax while others will charge both a licence fee and a business tax.

Miscellaneous Levies

The levies described below are not generally referred to as taxes but they are similar to taxes in many ways.

Unemployment Insurance

For the past two decades, a national program of unemployment insurance has been in operation in Canada. Essentially, it provides relief to those qualified persons who temporarily find themselves without work. It is administered by a federal commission appointed for this purpose and financed by equal contributions from employers and employees plus a contribution from the Federal Government. The amount paid into the fund by employee and employer is directly proportional to the weekly wages of the employee. The rates of contribution, together with statistics on the operation of the program, are given at pp. 756-761.

Workmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes establish an accident fund administered by a board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 765-767.

Hospital Insurance

A federal-provincial hospital insurance plan has now been adopted by the ten Canadian provinces. Under this arrangement, the Federal Government pays approximately one-half of the cost of hospitalization for patients who are participants under the plan. The provinces meet the rest of the cost. Provincial revenues for this purpose are raised by various means. The Province of Quebec has increased its personal and corporation income tax. Certain provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such provinces non-salaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 239-240.

Section 2.—Federal Public Finance

Subsection 1 of this Section contains tables dealing with statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the *Public Accounts*. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The *Public Accounts* presentation is retained for continuity and also because there is interest in and use for information on this basis.

Historical Data.—A sketch of public finance from the French régime to the outbreak of World War I appears in the 1941 Year Book, pp. 742-743. Detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945, is given in the 1945

Year Book, pp. 918-923. The postwar financial policy of the Government of Canada is outlined in the 1954 Year Book at pp. 1061-1064, and tax changes proposed in subsequent Budgets are outlined briefly in the respective Year Books.

The 1960-61 Supplementary Budget.—The Budget presented Dec. 20, 1960 to the fourth session of the 24th Parliament did not change the personal income tax rates, but the portion of corporation income subject to the 21-p.c. tax rate was changed from the first $25,000 to the first $35,000. The rate on the remainder continued at 50 p.c. The 4-p.c. surtax on investment income was repealed and the principal withholding taxes on interest and dividends paid to non-residents were raised to a uniform level of 15 p.c. A special 15-p.c. tax was made applicable to profits of Canadian branches of non-resident corporations.

The 1961-62 Budget.—This Budget was presented to the fourth session of the 24th Parliament on June 20, 1961. There were no changes in personal or corporation income tax rates, but the excise tax of 7½ p.c. on passenger cars was repealed. The maximum limits on allowable medical expenses for personal income tax purposes were removed, effective Jan. 1, 1961. Although there were no changes in the taxes on tobacco, cigarette manufacturers will be allowed to increase the amount of tobacco in each cigarette without becoming liable for a higher tax, effective Jan. 1, 1962.

The Minister of Finance announced that the Government would use the foreign exchange fund to lower the value of the Canadian dollar in terms of U.S. currency in an effort to reduce imports and encourage exports of Canadian goods abroad. Other proposals to stimulate the Canadian economy included expansion of the scope and lending capacity of the Industrial Development Bank to provide more credit for small and medium-sized businesses, and permission for companies to write off in a single year, instead of three, their capital expenditures on provision of industrial research facilities.

Subsection 1.—DBS Statistics of Federal Public Finance

Revenue and Expenditure.—Table 4 shows details of net general revenue of the Federal Government for the years ended Mar. 31, 1958 and 1959.

Guaranteed Debt.—In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act, the guaranteed bonds and debentures of the Canadian National Railways and the guarantee of deposits maintained by the chartered banks in the Bank of Canada. The remainder consists chiefly of guarantees of loans made by chartered banks to the Canadian Wheat Board and to farmers and veterans for certain authorized purposes and guarantees under the Export Credits Insurance Act.

12.—Guaranteed Debt of the Government of Canada, as at Mar. 31, 1960

Loans made by chartered banks under the Prairie Grain Loan Act	50,000,000	6,661

---

[1] These contingent liabilities are expressed in Canadian dollars; where applicable, stocks and bonds payable solely in sterling or United States dollars are converted on the basis of £1=$2.80 and $1 U.S.=$1 Canadian, respectively. In addition the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1959 amounted to approximately $15,000,000. Against this amount was a reserve of $2,943,321.

[2] As at Dec. 31, 1959.

[3] As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders for their respective fiscal years ended between Oct. 31 and Dec. 31, 1959.

A brief commentary dealing with the national debt of the Government of Canada from 1914 appears at p. 1091 of the 1954 Year Book. The following table summarizes the debt position during the period 1951-60 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the *Public Accounts*. They are summarized by standard classification in DBS publication *Financial Statistics of the Government of Canada* (Catalogue No. 68-211).

13.—Summary of the Public Debt and Interest Payments Thereon, Years Ended Mar. 31, 1951-60

NOTE.—Statistics for 1867-1913 are given in the 1942 Year Book, p. 775; those for 1914-35 in the 1947 edition, p. 972; those for 1936-48 in the 1951 edition, p. 1009; those for 1949 and 1950 in the 1959 edition, p. 1063.

[1] Based on the official estimates of population for June 1 of the year indicated (see p. 165).

[2] Based on the official estimates of population for June 1 of the year immediately preceding the one indicated (see p. 165).

[3] Excludes $87,510,058 adjustment required to place interest on public debt on accrued basis.

Subsection 3.—Revenue from Taxation

The incidence of Federal Government taxation is dealt with in the special article on Taxation in Canada at pp. 1038-1050. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, succession duties, excise duties and excise taxes; customs receipts constitute a single item in the *Public Accounts* and are not included here.

Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and, as a single cheque from one employer may frequently cover the tax payments of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 14 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

14.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1952-61

NOTE.—Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000; for 1935-48 in the 1951 Year Book, p. 994; and for 1949-51 in the 1959 edition, p. 1066.

Corporation Income Tax Statistics.—Corporation statistics presented in Tables 18 and 19 are on a taxation-year basis prior to assessment. The data were extracted and compiled from the returns shortly after they were filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large corporations operating across Canada file their returns in one or other of these provinces.

18.—Summary Statistics for Corporations Reporting a Profit, Taxation Years 1958 and 1959

Item	1958			1959		
	Corporations Reporting	Current Year Profit	Total Tax Declared[1]	Corporations Reporting	Current Year Profit	Total Tax Declared[1]

Succession Duties and Estate Tax

A history of succession duties in Canada, together with examples of the occurrences of federal duty on typical estates and of combined federal and provincial duties on typical estates, is given in the 1956 Year Book, pp. 1064-1068.

Since 1947, only Ontario and Quebec among the provinces have been levying succession duties, the other provinces having leased this field to the Federal Government under terms of the 1947, 1952 and 1957 tax rental agreements (pp. 1067-1070); a tax abatement of 50 p.c. of the federal estate tax otherwise payable is granted in respect of property situated in a province which does not 'rent' its succession duties to the Federal Government.

An outline of the Estate Tax Act passed by Parliament in 1958 is given in the 1959 Year Book, pp. 1070-1071. The Act was amended in 1960 with respect to charitable donations, life insurance and annuities.

Table **21** shows the receipts of the various governments from succession duties for the years ended Mar. 31, 1957-60.

21.—Federal and Provincial Revenue from Succession Duties and Estate Tax, Years Ended Mar. 31, 1957-60

NOTE.—Statistics for 1948-52 are given in the 1954 Year Book, p. 1080; for 1953-54 in the 1956 edition, p. 1064; and for 1955-56 in the 1959 edition, p. 1071.

Excise Duties

Gross excise duties collected during the years ended Mar. 31, 1956-60 are given in Table **23** and other data of interest arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of goods taken out of bond and subject to excise tax, are given in Table **24**. The totals given in Table **23** do not agree with net excise duties as shown in Table **9** because refunds, drawbacks and, for spirits, a transfer tax are included. A drawback of 90 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

Proof spirits manufactured	proof gal.	28,535,869	30,028,834	28,135,387	29,763,383	32,188,806

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from a low of 2,356,329 proof gal. in that year to a high of 35,555,059 proof gal. recorded in 1945. The total for 1960 was 32,188,806 proof gal.

The amounts of beverage spirits, malt beer, malt, cigars, ciragettes and other tobacco taken out of bond for consumption are given in the Domestic Trade Chapter, Table **38**, p. 913.

Subsection 4.—Subsidies and Taxation Agreements with the Provinces

Subsidies.—A brief history of certain annual payments made by the Federal Government to the provinces under the provisions of the British North America Act and subsequent arrangements entered into from time to time appears in the 1956 Year Book, pp. 1068-1069. All payments made by the Federal Government to the provinces during the year ended Mar. 31, 1959 are shown in detail in Table **6**, on p. 1053.

Taxation Agreements.—Early in World War II, the provincial governments vacated the personal income tax, corporation income tax and succession duty fields in favour of the Federal Government for the duration of the War and a limited period thereafter, in return for a tax rental payment from the Federal Government. Additional tax rental agreements were entered into between the Federal Government and the provinces in 1947, 1952 and 1957. The Province of Quebec did not rent its tax fields under any of these postwar agreements. Ontario did not rent any tax fields under the 1947 agreements; it did not rent succession duties under the 1952 agreements and did not rent either succession duties or corporation income tax under the 1957 agreements. Apart from these exceptions, all of the provinces have participated in the various tax agreements as fully as possible. Newfoundland rented its tax fields as soon as it entered Confederation.

The Wartime Tax Agreements of 1942 are outlined in the 1946 Year Book, pp. 900-901. The 1947 and 1952 Tax Rental Agreements are outlined on pp. 1087-1090 of the 1954 edition. The 1957 fiscal arrangements are authorized by the Federal-Provincial Tax-Sharing Arrangements Act. This Act was passed in July of 1956 and subsequently amended in 1958, 1959 and 1960 as noted below. It covers the five-year period from Apr. 1, 1957 to Mar. 31, 1962.

The current fiscal arrangements differ substantially in principle from those in effect before Apr. 1, 1957. Provision is still made for tax rental agreements in the fields of individual and corporation income tax and succession duties, but the tax rental payment to a province is now the estimated yield at certain agreed or 'standard' rates of the taxes rented by that province to the Federal Government. The fiscal aid components of the payments which were formerly contained in the total tax rental payment under the 1952-57 agreements are now dealt with separately by means of "tax equalization payments". These tax equalization payments are so calculated that, when added to the tax rental payments, they raise the total per capita return in each province to the average per capita return of standard taxes in the two provinces that have the highest per capita yield of standard taxes.

The standard taxes are: (*a*) individual income tax at 10 p.c. of the federal tax (raised in 1958-59 to 13 p.c.); (*b*) corporation income tax at 9 p.c. of corporation taxable income, and (*c*) succession duties at 50 p.c. of the federal duties averaged over a three-year period.

In addition, provincial revenue stabilization payments are provided which will support the payments to a province at a level determined by the greatest of: (*a*) the adjusted 1957 tax rental payment, which is the amount payable in 1956-57 to any province whether under an agreement or not, adjusted for any population changes in the year in question; (*b*) the projected tax rental payment, which is the amount that would be payable to any province in a year if the 1952 Tax Rental Agreements were to be extended into the year in question; and (*c*) the basic stabilization amount, which for 1958-59 was 95 p.c. of the amount of tax equalization payments, provincial revenue stabilization payments and current tax rental payments applicable to the province in 1957-58; and, for subsequent years, 95 p.c. of the average of such payments in the two previous years.

The tax equalization payments and the provincial revenue stabilization payments are payable to a province regardless of any action they may take in these tax fields. Tax rental payments, however, are subject to agreement. Where a province does not rent but levies its own tax, the federal tax is abated at the standard rate.

Following a Federal-Provincial Conference in November 1957, the Federal Government increased the standard rate of personal income tax from 10 p.c. to 13 p.c. This was done on an interim basis for the fiscal year 1958-59 by amendment to the Federal-Provincial Tax-Sharing Arrangements Act. The Act was amended again in 1959 extending the higher rate for another year and also in 1960 extending it for a further two years, i.e., to Mar. 31, 1962 when the 1957 agreements expire.

The 1958 amendments to the Federal-Provincial Tax-Sharing Arrangements Act also provided for the institution of special grants, known as Atlantic Provinces Adjustment Grants, to be paid to the four Atlantic Provinces for four years commencing Apr. 1, 1958 and totalling $25,000,000 annually divided as follows: Nova Scotia, New Brunswick and Newfoundland each $7,500,000, and Prince Edward Island $2,500,000.

The 1960 amendments to the Federal-Provincial Tax-Sharing Arrangements Act also provided alternative arrangements for payment of federal grants to institutions of higher learning. These grants are paid under the authority of the Act through the Canadian Universities Foundation or, under certain circumstances, directly by the province. Where a province that does not rent its corporation taxes to the Federal Government chooses to pay the university grants directly, its corporate taxpayers will receive an abatement from the federal income tax of 10 p.c. instead of 9 p.c. Where the loss of revenue to the federal treasury by reason of the 1-p.c. increase in abatement exceeds the cost of university grants of $1.50 per capita in the province concerned, a deduction equivalent to this excess will be made by the Federal Government from other payments made to the province under the Federal-Provincial Tax-Sharing Arrangements Act. On the other hand, if the cost of such increased abatement of 1 p.c. in the corporation tax rate should be less than university grants of $1.50 per capita, the Federal Government will pay the difference to the provincial government for the benefit of the universities.

Three Federal-Provincial Conferences—in July 1960, October 1960 and February 1961—have been held to discuss financial arrangements for the five-year period commencing Apr. 1, 1962. The federal proposals for this period were stated at the February conference, the main points being as follows:—

(1) The Federal Government would discontinue the tax rental system and the provinces would be free to impose whatever rates of tax in the jointly occupied fields they consider to be necessary to meet their respective financial responsibilities.

(2) The Federal Government would be willing to collect the personal income tax and the corporation income tax for any province using the same tax base as the Federal Government. A joint tax return would then be used by the taxpayer for both the federal and provincial taxes. This tax collection service would be provided free of charge and pursuant to a tax collection agreement. The Federal Government would also, in the case of any province choosing not to impose a succession duty, pay to such province half of the yield from the federal estate tax in that province calculated in the same way as under the current tax rental agreements.

(3) The Federal Government would reduce the federal personal income tax progressively by 16 p.c. during the first year of the new arrangement, 17 p.c. for the second year, 18 p.c. for the third, 19 p.c. for the fourth and 20 p.c. for the fifth. The Federal Government would reduce the federal corporation income tax by 9 p.c. of taxable income which is the same as the standard rate of corporation income tax under the 1957 tax agreements and which represents a diminution in the current federal tax of about 22 p.c. With respect to both the corporation and personal income taxes, the federal rates would be reduced from the levels which would otherwise prevail at the times specified. In the case of any province levying a succession duty the Federal Government would be prepared to abate its tax by 50 p.c. The rates noted above for personal income tax, corporation tax and succession duty would constitute standard rates of tax for purposes of calculating equalization and stabilization payments.

(4) Equalization payments for a fiscal year would be based on the amount, if any, required to bring each province up to the national average per capita yield of the three standard taxes at the progressively rising standard rates noted above, plus one-half of the three-year moving average of gross natural resource revenues as determined by the Dominion Bureau of Statistics for the three fiscal years immediately preceding. In addition, the proposed equalization formula contains two guarantees: (*a*) no province entitled to equalization under the national average formula would be worse off than it would be under a continuation of the present rates of standard tax (13–9–50) with equalization to the per capita average yield of the top two provinces and with the Atlantic Provinces Adjustment Grants; (*b*) no province would receive less in total than it received from standard taxes, equalization, stabilization and Atlantic Provinces Adjustment Grants for the fiscal year 1961-62 or the average of the fiscal years 1960-61 and 1961-62 whichever was greater.

(5) Stabilization payments would be continued assuring provinces that the amount of the yield of the standard taxes plus equalization would not be permitted in any year to fall below 95 p.c. of the average of the totals of the standard taxes, equalization and stabilization for the preceding two years.

(6) The Atlantic Provinces Adjustment Grants would be continued for a further five years and increased from $25,000,000 to $35,000,000 per annum with the basis of distribution among the four provinces being left for them to determine by agreement.

Additional Grants to Newfoundland.—The Newfoundland Additional Grants Act of 1959 provides for the following grants to be paid to the Province of Newfoundland: for the fiscal year (ended Mar. 31) 1957-58, $6,600,000; 1958-59, $6,950,000; 1959-60, $7,300,000; 1960-61, $7,650,000; and 1961-62, $8,000,000. These payments are made following the recommendations of a Royal Commission appointed pursuant to the Terms of Union of Newfoundland with Canada. The Commission's report, dated May 31, 1958, deals with "the form and scale of additional financial assistance, if any, that might be required by the Government of the Province of Newfoundland to enable it to continue public services at the levels and standards reached subsequent to the date of the Union, without resorting to taxation more burdensome, having regard to capacity to pay, than that obtaining generally in the region comprising the Maritime Provinces of Nova Scotia, New Brunswick, and Prince Edward Island". At the Federal-Provincial Conference in February 1961, the Federal Government announced its intention of continuing the $8,000,000 per annum payment to Newfoundland for the five-year period of the new arrangements.

Section 3.—Provincial Public Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the *Public Accounts* figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section.

As of 1952, the fiscal years of all provinces end on Mar. 31. Figures for the Northwest Territories are included from 1955.

Subsection 1.—Revenue and Expenditure of Provincial Governments

Table **25** shows net revenue and expenditure of provincial governments for the years ended Mar. 31, 1953-59, and Tables **26** and **27** give details of such revenue and expenditure for the fiscal years ended in 1958 and 1959. "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; grants-in-aid and shared-cost contributions from other governments; and capital revenue. Table **28** gives details of the amounts paid to other governments by provincial governments, according to nature of payment.

25.—Net Revenue and Expenditure of Provincial Governments, Years Ended Mar. 31, 1953-59

---

[1] N.S.—Crown land leases; Ont.—share of liquor licences; Alta.—share of liquor fines.

[2] Excludes grants in lieu of taxes paid by provincial government enterprises.

[3] Reimbursement of taxes to newly incorporated or extended municipalities.

[4] Excludes amounts paid directly to municipal hospital boards.

[5] Includes grants paid directly to teachers in P.E.I., N.B., and Que.

[6] Primary and secondary schools are operated on a denominational basis; grants to denominational schools amounted to $12,153,000.

[7] Excludes $4,403,000 expenditures by the province to meet debt charges of various school corporations.

[8] Local schools are operated by the territorial government and by religious denominations.

[9] Local schools are operated by the Federal Government, religious denominations and school districts; amount shown was paid to school districts.

[10] Studies and works on water-courses.

Subsection 2.—Debt of Provincial Governments

Table **29** shows total bonded debt, by province, as at Mar. 31, 1956-60. Table **30** shows that the majority of bond issues are payable in Canada, but that the portion payable in the United States increased only from 19 p.c. in 1957 and 1958 to about 24 p.c. in 1960. Table **31** provides details of total direct and indirect debt of provincial governments as at Mar. 31, 1959 and 1960.

29.—Gross Bonded Debt (exclusive of Treasury Bills) of Provincial Governments, as at Mar. 31, 1956-60

---

[1] Includes $50,000 bonds issued by the Provincial Sanatorium Commission; related sinking funds $43.000 at Mar. 31, 1959 and $45,000 at Mar. 31, 1960. [2] Includes bonds issued by the Ontario Junior Farmer Establishment Loan Corporation $11,000,000, and by the Ontario Municipal Improvement Corporation $36,850,000; also bonds assumed from issuing authorities $900,000. [3] Having a term of two or more years. [4] Having a term of less than two years. [5] Includes net liability of the province *re* Province of Ontario Savings Office $80,292,000 at Mar. 31, 1959, and $72,969,000 at Mar. 31, 1960. [6] Based on estimated population, see p. 165. [7] Includes bonds issued by the Ontario Junior Farmer Establishment Loan Corporation $14,000,000, and by the Ontario Municipal Improvement Corporation $38,350,000; also bonds assumed from issuing authorities $900,000.

Section 4.—Municipal Public Finance

Subsection 1.—Municipal Assessed Valuations and Taxation

Table 32 shows municipal assessed valuations and total exemptions, by province, for the year 1958 together with local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Assessment figures in the various provinces are not entirely comparable as there are still variations in methods, schedules and rates, not only between provinces but also between municipalities within the same province.

32.—Municipal Assessed Valuations and Taxation, by Province, 1958

[1] City of St. John's only. [2] Includes: N.S.—household tax, Halifax; N.B.—occupancy tax, Fredericton, and rentals tax, Moncton; Sask.—special franchise. [3] Total of valuations assessed but exempt from taxation; excludes exempt property not assessed. [4] Incomplete. [5] Excludes permissive exemptions. [6] City of Dawson only. [7] Yellowknife only. [8] Excludes partial statutory and permissive exemptions.

Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table **32** as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan municipalities are required to levy certain taxes for and on behalf of the provincial government and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes excluded in the Saskatchewan municipal levies in Table **32** are as follows:—

Tax	*1954*	*1955*	*1956*	*1957*	*1958*
	$	$	$	$	$

Subsection 2.—Municipal Revenue, Expenditure and Debt

Tables **33**, **34** and **35** show comparative totals and details of gross ordinary revenue and expenditure of municipal governments, by province. Table **36** sets out the direct and indirect debt of local governments for the year 1958. The amounts shown include debt incurred for general and school purposes, debenture debt incurred for and by utilities, and debenture debt incurred by certain special areas organized to provide specific local services.

CHAPTER XXII.—NATIONAL ACCOUNTS, SURVEY OF PRODUCTION AND INTERNATIONAL INVESTMENTS

CONSPECTUS

	Page		Page
Section 1. National Accounts	1082	Section 3. Canada's International Investment Position	1100
Section 2. Survey of Production	1095		

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—National Accounts*

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 4 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. For all other tables the data are expressed in current dollars so that year-to-year changes must be considered in relation to price changes over the period.

National accounts calculated on a quarterly basis are a logical extension of the annual national accounts and have been published since 1953. However, their preparation on a reliable and analytically useful basis is rather more difficult because of the scarcity of quarterly data, special problems arising from the measurement of farm production and problems in connection with seasonal variation.

The tables in this Section cover the more important aspects of the national income analysis in annual terms. Table **1** gives total gross national product in current and constant dollars for the years 1926-60. Tables **2** and **3** show the main aggregates of national income, gross national product, gross national expenditure and their components; other tables are included to show the source and disposition of personal income, government revenue and expenditure and personal expenditure on consumer goods and services.

---

*Prepared in the National Accounts Division, Dominion Bureau of Statistics.

National Income.—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

Gross National Product.—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1960.—The recovery in economic activity in Canada, which had begun in 1958 and continued throughout 1959, was interrupted in the course of 1960. Signs of weakness were particularly evident in the second quarter but by the fourth quarter expansionary forces were gaining ground. These conflicting movements combined to yield a gross national product total of $35,959,000,000 for the year, about 3 p.c. higher than the 1959 total. Part of the increase was attributable to higher prices, leaving a gain in volume of about 2 p.c., which compares with a postwar average of 4 p.c. per annum.

The pattern of developments within the year was one of slackening in final demand in the first quarter and a decline in both final demand and the value of production in the second quarter; the third quarter brought some recovery in final purchases but this was not fully transmitted to production since the bulk of these new requirements were met by drawing down stocks; both final demand and the building up of stocks contributed elements of strength in the fourth quarter but a decline in demand for Canadian export products was a partially offsetting influence.

The principal support to the level of economic activity in 1960 came from further expansion in government outlays for goods and services, from rising consumer purchases of non-durable goods and services, and from vigorous growth in the demand for Canadian export products on the part of industrialized overseas countries in Europe and elsewhere, which more than counteracted an easing in demand on the part of the United States. The weakness in end-product demand was centred in business expenditures for plant and equipment, in outlays for housing and in consumer purchases of durables other than automobiles. Business investment in plant and equipment failed to match the expectations expressed in the survey of intentions and for the year as a whole were slightly lower than in 1959. Outlays for housing were apparently affected by changes in basic demand factors as well as by the virtual withdrawal of the chartered banks from lending activity under the National Housing Act and the sharp contraction in direct lending by the Central Mortgage and Housing Corporation. Thus, outlays for new residential construction were lower by about 15 p.c. A drop in consumer purchases of household appliances, furniture and home furnishings probably was associated in part with the decline in housing. A sharp drop in inventory accumulation in the second quarter and a shift to liquidation in the third quarter reinforced the downward pressures inherent in the movements of some of the components of final demand.

The slackening in economic activity during 1960 was also reflected in changes in the direction and magnitude of income flows. The advance in labour income of about 4 p.c. during the year was little more than half as large as that achieved in 1959, and the earnings of non-farm unincorporated business enterprises declined. While total personal income was higher by 4 p.c., this compared with a gain of 6 p.c. in 1959. Earnings of corporations in 1960 fell below the 1959 level by about 6 p.c. compared with a very substantial increase in the preceding 12-month period. At the same time, the tax revenues of governments were adversely affected by the reduced flow of income to the business sector and by the smaller rate of advance in personal incomes, with the result that total government revenues rose by a narrower margin than in 1959.

Production, Employment and Prices.—Indicators of the physical volume of output in 1960 showed an advance of about 2 p.c. While both the goods-producing and service-producing industries shared in this gain, the major contribution came from the latter group. Output was up significantly in all the service components but movements in the goods-producing group diverged quite widely.

Among the primary industries, agricultural output was moderately higher in 1960, reflecting a substantially larger crop of grain of better quality, a decline in the production of livestock and poultry, and little change in the production of other farm products. While output in forestry recorded a gain of 11 p.c. over 1959 (which was a strike-affected year), it remained below the record achieved in 1956.

A 1-p.c. increase in mining output was the outcome of fairly small and largely offsetting movements in the four components of the industry. Output in metal mining was lower by 2 p.c., reflecting a pronounced drop in the production of uranium and a substantial decline in the output of iron ore, which were only partly offset by sharp expansion in the production of nickel, copper and lead. Output in quarrying, which is closely tied to the demands of the construction industry, was down by 5 p.c. All three components—coal, petroleum and natural gas—contributed to a 5-p.c. increase in output of the fuels group; the gain in coal and in petroleum was moderate but an increase of 17 p.c. occurred in output of natural gas. A 2-p.c. increase in the output of the non-metals group was accounted for by expanded output of asbestos.

For the third year in succession, the volume of output declined in the construction industry. The drop of nearly 5.5 p.c. in 1960 was associated with an estimated 17-p.c. fall in the volume of residential construction and a fractional decline in the volume of non-residential construction.

A 2.3-p.c. increase in the output of non-durable goods combined with a 1.7-p.c. decline in durables kept manufacturing production in 1960 fractionally higher than in 1959. Most of the non-durable goods industries recorded gains but they were small, with the important exception of chemicals for which output rose 12 p.c. A substantial decline in output occurred in rubber products and leather products and a moderate decline was recorded by the textile industry.

Only two of the durable goods industries showed expanded production in 1960. An 8-p.c. advance in the output of non-ferrous metal products reflected the buoyancy of overseas export demand and slightly higher production of transportation equipment reflected increased output of motor vehicles which more than offset lower production of other equipment. In the woods products industry (strike-affected in 1959), production was only slightly lower, despite weakness in the demand from the construction industry in both Canada and the United States. Production of electrical apparatus and supplies dropped 2 p.c. and both non-metallic minerals and iron and steel products dropped 6 p.c.

The volume of activity in trade was up about 1.5 p.c. in 1960, with wholesale and retail trade showing the same rates of increase. Within retail trade, movements were mixed—food chains continued their steady expansion, raising the volume of their activity by 5 p.c., but gains in other trades were for the most part small. One of the more important trades recording less activity in 1960 was lumber and building material dealers, which was down 10 p.c.

Output of the utilities continued to make relatively large gains in 1960. The 11-p.c. increase reflected an advance of 9 p.c. in the production of electricity and another major increase in the distribution of natural gas.

The volume of traffic handled by the transportation industry as a whole rose nearly 2 p.c., despite a 3-p.c. decline in railways and in bus systems. Railway revenue carloadings of all major commodities except pulpwood and ores and concentrates were lower in volume; the largest declines were in livestock, iron ore, building materials other than lumber and timber, and automobiles, trucks and parts. The other components of the transportation industry—trucking, oil pipelines, shipping, and air transport—recorded gains ranging from 3 p.c. in trucking to 13 p.c. in air transport. The volume of output in the communications industry continued to rise and was up 5 p.c. in 1960. The other service-producing industries also recorded further expansion in activity, amounting to 3 p.c. in financial services and to about 2 p.c. in government service and in other services as a group.

The moderate increase in the volume of the nation's production in 1960 was accompanied by a roughly equivalent gain in employment, which was up 1.7 p.c. in total. An outstanding feature of the labour market was the continued strength of demand in those areas of employment—notably trade and services—where women constitute a large proportion of the labour force, as contrasted with the weakness of demand in those areas—notably durable goods manufacturing and construction—where the work force is predominantly male. The consequence of this pattern in the demand for labour was that there was only a fractional gain in the number of men employed in 1960 in contrast to a 6-p.c. increase in the number of women employed.

The increase in employment in 1960 of 1.7 p.c. fell somewhat short of the growth of the labour force, which amounted to 2.8 p.c. Unemployment as a percentage of the labour force rose from an average of 6 p.c. in 1959 to 7 p.c. in 1960. Participation rates for the population 14 years of age or over rose from 53.9 p.c. to 54.3 p.c., reflecting a slight decline in the male participation rate and a considerable increase in the female participation rate. This development was associated with the relatively favourable opportunities in the market for women workers.

Final product prices drifted upward slightly between 1959 and 1960, the aggregate increase being about 1.5 p.c. This was the smallest year-over-year price increase for any year since 1955 when the increase was 1.3 p.c., and compares with an average annual price rise of 2.5 p.c. for the years 1956 to 1960. The increase in the price of consumer goods and services was small and was virtually unchanged from the increase that occurred between 1958 and 1959. The prices of both capital goods and exports showed a more moderate advance than between 1958 and 1959. Prices of imported goods, however, which declined fractionally in 1959, rose somewhat in 1960, reflecting, in large part, a lower rate of exchange on the Canadian dollar.

Components of Gross National Expenditure.—While consumer spending rose somewhat more than consumer disposable income in 1960, it failed to match the gains of the two preceding years. The increase in 1960 amounted to 4 p.c., compared with nearly 6 p.c. in 1958 and 1959. Whereas in these two years, and in 1959 particularly, the market for consumer durables expanded, in 1960 there were important areas of weakness and spending on durables showed only a fractional gain. At the same time, expenditure on non-durable goods rose about 4 p.c., the same rate of increase as in 1959, while expenditure on services rose by more than 5 p.c. compared with a gain of nearly 8 p.c. in the preceding year.

Of the increase in total consumer spending in 1960, somewhat more than 1 p.c. was accounted for by higher prices in the consumer sector, the smallest rate of increase in recent years. Services continued to account for the major part of the advance in consumer prices; prices of non-durables were somewhat higher but prices of durables edged downward. The approximately 3-p.c. rise in real consumption represented a gain of about 1 p.c. in per capita terms.

All components of services contributed to the 5.5-p.c. advance in expenditure but the sharpest rate of increase was for hospital and medical care, which rose by 9 p.c. Consumer purchases of most major categories of non-durables rose in 1960—food purchases by 3 p.c., clothing by 2 p.c., and alcohol and tobacco by 3.5 p.c. and 5.5 p.c., respectively. The increase in expenditure on non-durables as a group represented a gain of about 1 p.c. in real per capita consumption. Among the durables, an increase of 3.5 p.c. in purchases of new and used cars was almost offset by lower expenditures for most other durables. Statistics of factory shipments of household durables were, in general, either unchanged or considerably lower. For example, shipments of washing machines were down 10 p.c., of electric stoves 12 p.c., of radios 10 p.c. and of television sets 16 p.c. On the other hand, there was an increase of over 60 p.c. in shipments of home freezers. The widespread weakness in the demand for houshold durables was probably related in part to the much reduced level of activity in housing. A 7-p.c. increase in the sale of new passenger cars to persons in 1960 compares with an increase of 10 p.c. in the preceding year. As in 1959, the rise in sales of British and European cars was large relative to the increase in sales of North American cars, although the disparity was less marked in 1960. Sales to persons of British and European cars were up nearly 20 p.c. and sales of North American cars less than 5 p.c.

With consumer outlays higher by 4 p.c. in 1960 and disposable income showing a smaller gain of 3.5 p.c., the rate of personal saving fell. In 1959 personal saving amounted to 7.2 p.c. of disposable income; in 1960 the proportion was 6.7 p.c.

Turning to the investment sector, business gross fixed capital formation was estimated at $6,600,000,000 in 1960, some 4 p.c. lower than in 1959. The decline was centred in residential construction. Expenditures on plant and equipment were close to the level of the previous year, the construction component being slightly lower and the machinery and equipment component unchanged. Most of the changes in business investment outlays (excluding housing) were fairly small. Expenditures were higher in the three primary industry groups of mining, forestry and agriculture. In manufacturing, outlays rose by 4 p.c. and in institutional services by over 7 p.c. Capital outlays declined in the construction industry, in trade, finance, insurance and real estate, and in commercial services. However, the major decrease in 1960, amounting to nearly 5 p.c., occurred in the large investment program being carried on by the utilities.

Within manufacturing industries, changes in capital outlays were mixed and to some extent offsetting. The manufacturing industries reporting substantially larger capital outlays in 1960 were iron and steel, paper products and chemical products. On the other hand, capital expenditures in transportation equipment and in non-metallic mineral products were considerably lower than in 1959.

Most of the utilities carried out smaller capital programs in 1960 than in 1959. Among the major utilities, much the largest reduction took place in outlays by the railway group. The outlays of electric power utilities were considerably lower than in 1959 and much below the extremely high levels reached in several previous years. Expenditures by the telephone industry were considerably higher, as were those of "other utilities"—a miscellaneous group which includes air transport, warehousing, oil and gas pipelines and toll highways and bridges; the increase in the latter group was attributable to higher expenditures on aircraft and on the construction of gas and oil pipelines.

Expenditure on residential construction in 1960 fell to $1,476,000,000, a drop of 15 p.c. from the level of 1959. Housing starts showed marked improvement in the second half of the year but the 109,000 units started during the year as a whole constituted a decrease of almost 23 p.c. compared with 1959 and was the lowest number since 1953. As previously stated, this decline in starts mainly reflected the sharp contraction in lending by the chartered banks and by the Central Mortgage and Housing Corporation, even though offset to some extent by the expansion in lending activity by life insurance, loan and trust companies under the National Housing Act. Basic demands for housing may also have been affected by lower levels of family formation in recent years. There was a substantial carryover of uncompleted houses at the beginning of the year so that completions in 1960 fell only 15 p.c. The distinct improvement in housing starts in the course of 1960 was attributable to a number of factors. During the year the Central Mortgage and Housing Corporation began to accept applications for loans and steps were taken to remove or relax restrictions on direct lending. Moreover, as credit conditions eased, mortgage lending became more attractive to approved lenders and, as already mentioned, the life insurance, loan and trust companies began to lend in volume.

The build-up of goods in inventory in 1960 continued at a rate very little changed from the previous year, in comparison with the large-scale swings in the rates of change which occurred between 1957 and 1958 and between 1958 and 1959. This annual comparison, however, conceals the important impact which shorter run changes in business inventories had on production during 1960. As the rate of over-all economic activity weakened early in the year, the pronounced rate of inventory accumulation evident in the first quarter fell sharply in the second quarter, and by the third quarter some liquidation of stocks was taking place. During the final three months of the year, however, developments in the inventory sector were once more placing new demands on production, and a limited build-up of stocks occurred.

The data on manufacturing industries suggest that some of the fairly heavy build-up of stocks in manufacturers' hands in the first half of the year was involuntary, occurring against a background of falling shipments and a rapidly contracting backlog of unfilled orders. Although stocks at all levels of fabrication increased, the accumulation was most marked in finished goods, suggesting that cut-backs in production were not sufficient to offset falling demand. The accumulation in the first two quarters of the year was widespread, although in the second quarter it was tempered by a substantial drawing down of stocks in the tobacco and paper industries.

During the second half of the year there was a general lowering in the level of manufacturers' stocks. As shipments began to rise, the level of raw materials and goods in process was lowered. Stocks of finished goods, after eight months of uninterrupted increase, finally levelled off and in the last two months of the year contracted; despite this, in certain durable goods industries the ratio of finished goods to shipments remained at a high level in comparison with past periods.

In contrast to the slow-down in the rate of liquidation in over-all manufacturing, the rate of liquidation in durable goods increased between the third and fourth quarters. The primary cause of this was the heavy drawing down of stocks in the iron and steel industry, supported by continued liquidation in both the transportation and electrical equipment industries. The impact of these depletions was offset to some extent by an increased rate of accumulation in non-ferrous metal products.

Inventory movements of non-durables exerted a moderating influence on the pace of liquidation of total manufacturers' stocks, as an irregularly high build-up of stocks in the tobacco industry and some additions to food and beverage stocks took place. The increase in the tobacco industry reflected the earlier-than-normal processing of an unusually large crop in 1960.

The build-up in retailers' stocks, which had been under way since the early part of 1958, continued at an increased rate in 1960, although the rate of increase slackened noticeably in the second and fourth quarters. The dominating features of the year were: the steady increase of stocks in motor vehicle dealers hands until the fourth quarter, at which time a marked increase in sales caused a small drop in the level of stocks; the accumulation of food stocks, which was heavy in the first and last quarters; and the 'swing' in clothing stocks, which increased in the first and third quarters and were drawn down heavily in the second and fourth. The broad movements in retail stocks in 1960 conform closely to the over-all pattern of changes in consumer spending. Consumer spending fell slightly in the first quarter and increased only fractionally in the third quarter, at which time retail stocks rose sharply; in the second and fourth quarters, when consumer spending advanced strongly, retail stocks rose at a more modest rate.

Stocks in the hands of wholesalers, after increasing in the first two quarters, fell in the third in line with the general lowering which took place in manufacturers' stocks. The liquidation was widespread and in a number of trades continued into the fourth quarter; however, it was offset in part in the fourth quarter by the sharp increases in stocks of industrial machinery and equipment, and hardware and other furnishings, both of which may have reflected the upturn in fixed investment in machinery and equipment and the improved outlook for building, particularly residential construction.

The dominant feature of the international trading environment in 1960 was the vigorous expansion in the economies of a number of industrialized overseas countries and the hesitant behaviour of the North American economy. In this situation, Canadian exports of goods and services rose to $7,000,000,000, a gain of 4.2 p.c. over 1959, with the bulk of the increase accounted for by the merchandise items. At the same time, the demand for imports was on a declining trend throughout most of the year, and for 1960 as a whole merchandise imports showed little change from 1959. The outflow of payments on service account, however, continued to rise but more moderately than in earlier years. The consequence of these trends was a contraction in the deficit on Canada's current account (on the national accounts basis) from about $1,400,000,000 in 1959 to $1,200,000,000 in 1960.

The strong demand for Canadian export products originating in the countries of Western Europe, the United Kingdom, and in some other overseas countries (notably Japan and Australia) raised exports to overseas destinations by 20 p.c. This increased strength of demand became evident in the latter part of 1959 and persisted throughout 1960. By contrast, exports to the United States were about 5 p.c. lower for the year as a whole, and showed a declining trend within the year. Thus the year was characterized by an abrupt change in the direction of export trade within a rising total. The largest part of the increased demand was for major export staples of primary and semi-processed materials but there were also gains in some manufactured goods, particularly in the United Kingdom where restrictions on many imports had been removed. Some of the largest gains occurred in such metals as aluminum, copper, nickel, zinc, primary steel and rolling-mill products, and in asbestos and petroleum. Other leading exports such as pulp and paper, lumber and chemicals also rose, but iron ore showed little change. Textiles and non-farm machinery are among the manufactured goods making impressive gains. By contrast, agricultural exports dropped, including wheat, other grains and flour, and cattle and dairy products. Shipments of fish, farm implements and uranium were also lower.

While total receipts from services rose moderately in 1960, the individual items in the invisible account showed mixed movements. Receipts from tourist trade rose considerably and there was some increase in gold available for export. However, receipts from freight and shipping were somewhat lower, as were receipts from interest and dividends. The decline in the latter largely reflects lower dividends from foreign subsidiaries of certain Canadian manufacturing companies.

With no expansion in outlays for new plant and equipment in 1960 and a drop in the rate of investment in business inventories, commodity imports eased a little, declining by about one-half of 1 p.c. The relative stability in the total was accompanied by stability in most of the major groups. Increases were generally small and confined to comparatively few items, some of which were affected by special circumstances. Among the increases were such varied items as vegetables, cotton and textiles, iron ore, crude petroleum, automobiles and aircraft. Reductions were more numerous and often small, although the drop in petroleum products, tractors and agricultural implements was comparatively large. Imports of other kinds of equipment remained high.

Payments for services continued to rise in 1960 and were about 2 p.c. higher than in the previous year. Most of the increase was in two items of the account—tourist expenditures and miscellaneous services. Payments of interest and dividends, in total, remained about the same. The large net sales of provincial, municipal and corporation bonds in 1959 and the first half of 1960 raised significantly the level of interest payments. On the other hand, dividend payments declined. This decline, which was concentrated in the closing quarter of the year, reflected smaller remittances by a number of large Canadian companies to their non-resident parents.

The remaining component of demand—government expenditure on goods and services—estimated at $6,700,000,000 in 1960, was 5 p.c. higher than in 1959. All of this increase was attributable to provincial and municipal governments; Federal Government expenditures were moderately lower. The major part of the 13-p.c. advance in provincial government expenditures represented higher outlays on highways, although a variety of other provincial activities in the fields of public works, development, health and education also contributed. The gain in municipal outlays was estimated at 10 p.c., attributable to increased wages and salaries and higher capital expenditures.

While federal defence expenditures were almost unchanged, outlays for other purposes were substantially lower. This decrease reflected, among other things, a lower level of capital investment, a liquidation of stocks held by the Agricultural Stabilization Board and lower out-payments from the Colombo Plan Fund.

Transfer payments from governments to persons in 1960 were higher than in 1959 by 13 p.c. A large part of the 11-p.c. advance in federal transfer payments was accounted for by higher unemployment insurance payments (+$75,000,000), reflecting not only an increase in unemployment but also amendments to the Unemployment Insurance Act introduced in the course of 1959, which extended the duration of benefits and increased rates of benefit for some classes of insured persons. There was also a considerable increase in payments to western grain producers (+$38,000,000) and to universities (+$29,000,000). Old age security payments and family allowances continued to rise by amounts of about $15,000,000 each. At the provincial level, transfer payments advanced 18 p.c. over the previous year. Among the contributing factors were higher payments for direct relief, increases in payments to disabled persons and old age and blind pensioners, and higher grants to hospitals, universities and charitable organizations.

These changes on the expenditure side of the government accounts, together with higher interest payments on the public debt and increased subsidies, brought about an increase in total net government outlays of about 8 p.c. At the same time, government revenues rose by 5 p.c., reflecting increases in personal direct taxes (associated with higher rates effective for the whole year), and increases in indirect taxes from higher excise taxes at the federal level and from increased real property taxes at the municipal level. Investment income and employer and employee contributions to social insurance and government pension funds also increased substantially. However, a substantial drop occurred in corporation taxes and there was a small decline in customs import duties. With total government revenues higher by 5 p.c. and expenditures higher by 8 p.c., the over-all deficit on government transactions (on the national accounts basis) widened to $800,000,000. In the final quarter of the year, it is estimated that the deficit for all governments combined was running at a seasonally adjusted annual rate in excess of $1,000,000,000.

Components of Gross National Product.—Labour income continued to rise in 1960, but at a significantly lower rate than in the preceding year. The gain of 4 p.c. contrasted with one of almost 8 p.c. in 1959. Associated with this advance in income in 1960 was a nearly 2.5-p.c. increase in the number of employed paid workers and higher average hourly earnings in many industries. Most of the major industries shared in the advance in labour income. Exceptions were construction, mining and transportation where income was either unchanged or slightly lower; in all these industries the level of employment declined significantly in 1960. The largest gain in labour income (13 p.c.) was recorded in forestry, but about two-thirds of this was attributable to the sharp temporary drop in income in 1959 during the industrial dispute in the woods industry in British Columbia. As in the recent past, gains in the service industries were relatively large; the increase in services other than government was 10 p.c. and in government service 7 p.c. In public utilities, communications, trade and financial services the advance in labour income ranged from about 3.5 p.c. to about 5.5 p.c. In general, these gains continued to be associated with increased employment in the respective industries.

Despite a small decline in employment in manufacturing and some reduction in hours of work of hourly rated employees, labour income in manufacturing in 1960 was up from 1959 by about 2 p.c., as average hourly earnings continued to rise. Most of the loss of employment was concentrated in the durable goods group where earnings on the average are substantially higher than in the non-durable goods group. Thus the distribution of manufacturing employment in 1960 compared with 1959 was one of the factors adversely affecting the rise in income.

Reflecting the partially offsetting influences present in the economy in 1960, corporate profits fell by about 6 p.c., following a considerable advance in the more expansionary climate of the previous year. A lower level of profits was a fairly common experience among industries, although there was a substantial increase in profits in mining, quarrying and oil wells and in financial services as well as a significant gain in public utilities. Most of the individual manufacturing industries shared in the unfavourable profits experience of the group as a whole, total manufacturing profits being down by about 11 p.c. Among the major manufacturing industries, the sharpest decline took place in iron and steel where profits were off about 24 p.c.; this decline was associated with reduced output in the industry. The deterioration in profits was also relatively large in such other durable goods industries as wood products, electrical apparatus and supplies and non-metallic mineral products. On the other hand, profits were moderately higher in paper products and in products of petroleum and coal where production was also higher in 1960 than in 1959.

Despite a significant increase in the volume of trade, profits were substantially lower in both wholesale and retail trade, apparently associated with higher costs and the easing in some prices. A small decline in profits in the transportation, communication and storage group was, in part, the result of the smaller volume of traffic handled by the railways.

Rent, interest and miscellaneous investment income rose by close to 4 p.c. in 1960. Net residential rents (paid and imputed) were estimated to have fallen; the rise in unit rents and the growth in the stock of dwellings were more than offset by higher operating expenses. Athough a larger deficit was recorded on operations of the Canadian National Railways together with a small deficit on the operations of Trans-Canada Air Lines (the first in many years), profits of government business enterprises rose by 7 p.c. in 1960.

Accrued net income of farm operators from farming operations in 1960 as estimated at $1,200,000,000, about 6.5 p.c. higher than in 1959. Cash income was slightly lower but the increase in the value of farm inventories at year-end raised gross income. Farm operating expenses and depreciation continued to rise but not enough to offset the advance in gross income. According to the preliminary estimate, the crop of grain in 1960 was about 11 p.c. larger than in the previous year; most of this increase was reflected in inventories rather than in sales. Livestock production showed a small decline in 1960. Increased cash income from the sale of cattle and calves partly offset the reduced income from the sale of hogs. Higher inventories at year-end reflected the further build-up of the cattle population, which more than compensated for reduced hog numbers.

Estimated at $2,100,000,000, income of non-farm unincorporated business was lower than in 1959 by 5 p.c. Income in construction and retail trade dropped sharply but there was some offsetting increase in income in the service industries.

National Savings and Investment.—Following a fairly substantial increase in 1959, gross national saving declined moderately in 1960. Estimated at $5,800,000,000, it was more than 2 p.c. lower than in the preceding year, and represented 16 p.c. of gross national product as compared with 17 p.c. in 1959. The drop in national saving reflects the larger government deficit referred to earlier; a moderate decline in personal saving offset a small increase in business saving.

The program of fixed investment in plant and equipment and housing was somewhat lower in 1960 and the rate of investment in inventories was largely unchanged. As in previous years, part of the total investment program was financed by resources from abroad, to the extent of $1,200,000,000, compared with $1,400,000,000 in 1959.

Section 2.—Survey of Production*

Scope of the Series.—The scope of the survey of production is limited to industries chiefly engaged in the production of commodities. The activities of such industries as transportation, communication, trade, finance and service are excluded except as certain of their costs are indirectly reflected in the value of output of the commodity-producing industries. This is in contrast to the scope of the gross national product series in the national accounts (see p. 1083) which encompasses all industries.

The term "production" is used in its popularly accepted sense as applied to such processes as the growing of crops, the mining of minerals, the catching of fish, the conversion of water power to electric energy, the construction of buildings and the manufacturing and processing of goods. Primary production includes agriculture, forestry, fisheries, trapping, mining and electric power; construction and manufacturing are classified as secondary production.

In combining value of production figures for a number of industries, it is essential, in order to assess accurately the contribution of each industry to the total, that inter-industry duplication be eliminated. Thus only the "net" value of production, or "value added" is considered in this series.

Relation to National Income Accounting.—As already mentioned, "net" production or "value added" is generally considered the most significant measure of production. Value added is computed by deducting from the total value of output (excluding indirect taxes) for each industry, the cost of materials, fuel, purchased electricity and process supplies consumed in the production process. This measurement is similar to but not strictly comparable with the concept involved in the contribution of each industry to the gross national product at factor cost. There are conceptual differences as well as problems of classification.

The value of gross national product at factor cost can be measured either directly by summing the factor incomes and capital consumption allowances paid or charged by each industry, or indirectly by subtracting all intermediate goods and services from the revenue (excluding indirect taxes) arising from the production of goods and services in each industry. The latter approach is followed in the compilation of the value added statistics of the survey of production series. These value added residuals for each commodity-producing industry, however, are not exactly equivalent to gross national product originating in these industries since they still contain certain miscellaneous indirect taxes such as licences and property taxes as well as the cost of such services as insurance, advertising, communications, etc., which originate in the non-commodity-producing industries. For instance, while the cost of insurance incurred by manufacturers is included in the net value of the manufacturing industry as given in this Section, it is not included in the contribution of manufacturing to total gross national product at factor cost.

---

* Prepared in the Industrial Output Section, National Accounts Division, Dominion Bureau of Statistics.

The data necessary to make the deduction of these business service costs from value added to arrive at a true figure of gross national product for each industry and province are not collected. However, available data* indicate that these costs constitute a smaller share of value added for such industries as agriculture and mining than for manufacturing and construction. The contribution to total gross national product of the primary industries and of those provinces whose economies are largely dominated by the primary industries is thus proportionately greater than the data contained in this Section indicate. Thus the measurement of the value of output based on "value added" contains some duplication if it is used as an approximation of gross national product originating.

One of the major problems of classification is that the data for three sectors of the gross national product by-industry estimates (net income of unincorporated business, investment income, and capital consumption allowances and miscellaneous valuation adjustments) are on an enterprise basis while data for the other sectors (wages, salaries and supplementary labour income and the inventory valuation adjustment) are on an establishment basis. By contrast, most of the value added data for the commodity-producing industries are on an establishment basis, each unit of an enterprise being treated as a separate entity and classified to the industry in which it operates. A company may own several establishments which are classified to different industrial divisions. The nature of the available data makes it extremely difficult, in compiling industrial distributions of the gross national product, to get an accurate breakdown of enterprise-type statistics on a plant-to-plant basis for such companies; for this reason, the adjustment to an establishment basis was not made to the industrial distribution of the gross national product series. Nor is a geographical allocation of data available for that series, although the personal income component is capable of provincial distribution. Thus, a major advantage of the net value of commodity production series is that it can be broken down by province. Also, in compiling the gross national product series it is difficult to allocate corporation profits according to the provinces in which they are generated by productive activity, but it should be borne in mind that the commodity production estimates by province exclude the non-commodity-producing industries.

Statistics of Commodity Production.—The postwar period 1947 to 1959 has been a period of tremendous growth in commodity production in Canada. The total net value of output all but doubled between 1947 and 1955 and increased another 18.8 p.c. by 1959. Among the primary industries, mining showed the greatest absolute increase, advancing from $402,538,000 to $1,497,104,000, or by 271.9 p.c. Electric power followed, rising 222.1 p.c. in the same comparison and reflecting a substantial increase in installed generating capacity during the period. However, the great activity experienced by the construction industry all across the country during these years resulted in that industry showing the largest proportionate gain of all the major commodity-producing industries in the 1947-59 comparison; its net value of output rose by 285.2 p.c. from $963,100,000 to $3,710,129,000, although the 1959 figure was slightly lower than those for 1957 and 1958. Manufactures advanced steadily throughout the period, except for a slight decrease in 1958, reaching a total of $10,320,963,000 in 1959, a figure 140.5 p.c. above that of 1947.

---

* Industry "value added" totals were compared, after adjustment for classification differences, with corresponding gross national product totals for 1949 contained in DBS supplement to Reference Paper No. 72 *Supplement to the Inter-Industry Flow of Goods and Services, Canada, 1949*. Industry values in that report are all on an establishment basis.

The shift in relative importance of primary and secondary production during the 1947-59 period is noteworthy. In the earlier year primary production represented 34 p.c. of the total net value of Canadian production and secondary output 66 p.c.; by 1959 the proportions were 25 p.c. and 75 p.c., respectively. Internally, agriculture's share of the total net value dropped from 20 p.c. to 10 p.c. over the twelve-year period and the relative importance of construction increased from 12 p.c. to 20 p.c. The contribution of manufacturing to total net value of production remained fairly steady at from 53 to 55 p.c.

Tables **11** and **12** show the long-term growth of net output of the commodity-producing industries, by industry and by province. Figures for the two latest years available are given by both industry and province in Table **13**.

11.—Net Value of Production and Percentage Analysis, by Industry, 1947, 1950, 1953 and 1957-59

NOTE.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the production process. Data for fisheries and trapping represent total value. This series has been revised with respect to certain purchased agricultural services since publication in the 1960 Year Book.

Section 3.—Canada's International Investment Position*

Canada is by far the world's largest importer of private long-term capital, and the tremendous capital formation which has been a feature of most of the period since the 1940's has been associated with an unprecedented growth in the country's external liabilities. These investments have contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and have added significantly to Canadian production, employment and income. At the same time they have added substantially to the burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities amounted to $26,400,000,000 at the end of 1960; non-resident-owned long-term investments in Canada had reached a book value of $22,300,000,000, having tripled since the end of World War II. The part of these investments in establishments controlled outside Canada totalled $12,900,000,000. These foreign direct investments have been growing more rapidly than the total. Advances in other Canadian equities, although smaller, have also been substantial and there have been sharp increases in recent years in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside of Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled $9,400,000,000 at the end of 1960 and government-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness at the same date was estimated at $17,000,000,000, well over half of which was incurred in the five years since 1955 and more than two-thirds in the eight years since 1952.

Foreign Investments in Canada.—Dependence upon external sources of capital for financing in earlier periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth period that occurred before World War I the rate of increase in non-resident investment was very high and dependency upon external sources of capital was greater than in later periods. Total non-resident investments in Canada increased from an estimated $1,232,000,000 in 1900 to $3,837,000,000 by 1914, mainly in the form of bonded debt for railway and other expansion guaranteed by the Canadian Government. This was the period when the principal external source of capital was London, and by 1914 British investments in Canada, estimated at $2,778,000,000, were at about their highest level. By the same date, United States investments, although they had been increasing rapidly, had only about one-third of the value of British-owned investments.

During the first part of the inter-war period the United States became the principal source of external capital, and by 1926 the United States-owned portion of Canada's international debt exceeded that owned in the United Kingdom which had not increased since 1914. Growth in United States investments in Canada continued for some years but was interrupted in the 1930's when the total was reduced by repatriations of securities and other withdrawals of capital. Increases began again in the 1940's and by the end of World War II, United States investments of $4,990,000,000 compared with British investments of $1,750,000,000. The latter had been reduced by wartime repatriation measures and the proceeds were used in financing British expenditures in Canada. Following the War, up to 1948, some further declines occurred in British investments in Canada but since then they have increased.

---

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. A more extended review appears in DBS report *Canada's International Investment Position, 1926 to 1954* (Catalogue No. 67-503) and more recent statistics in the annual report *The Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201).

United States investments have risen each year since the end of World War II, particularly since 1947 when the period of intense activity in the petroleum industry got under way following new discoveries. More than half the growth in United States investment in Canada has occurred since 1952. At $17,000,000,000, United States investments in 1960 continued to represent more than three-quarters of all non-resident investments in Canada and also made up a similar ratio of the increase since 1952. The main rise occurred in direct investments in companies controlled in the United States, which are prominent in many branches of Canadian industry. By 1960 these had increased to well over three times their value in 1952. In the same period portfolio investments in Canada owned in the United States rose by more than two-thirds. A considerable part of this latter rise occurred in the period 1956-59 when large sales of new issues of securities were made in that country.

British investments in Canada totalled $3,350,000,000 at the end of 1960. Although these investments then exceeded by some hundreds of millions of dollars the levels reached at the end of World War I and again in the early 1930's, they accounted for only about 15 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. British investments in Canada had more than doubled from the low point in 1948; the increase had been particularly concentrated in direct investments which had more than tripled and which, at the end of 1960, represented a much larger portion of the total than in the prewar period. In absolute terms, this rise in total British investments in Canada is more than the rise in investments by all other overseas countries in the same period, although the rate of increase has been lower.

Investments of countries other than the United States and the United Kingdom reached a record total of nearly $2,000,000,000 at the end of 1960. Approaching four times the corresponding 1952 figure, this represented a much higher rate of increase than had occurred in either United States or British investments and large increases had taken place in portfolio holdings of securities as well as in direct investments. At 9 p.c. of the total, this group of countries, mostly in Western Europe, made up a larger portion of total investments than ever before. Nearly 90 p.c. of the direct investments, which totalled $610,000,000 in 1959, also came from Western Europe; more than one-quarter was of Belgian origin with French, Swiss and German investments making up the next largest groups.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1955 the net use of foreign resources amounted to about one-fifth of net capital formation in Canada, and direct foreign financing amounted to about one-third. But from 1956 to 1959 when these ratios had increased considerably to more than one-third and two-fifths, respectively, they were still less than the corresponding ratios in the period 1929 to 1930 when inter-war investment activity was at its highest point. In that shorter period more than one-half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was financed by external capital. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities, and other forms of social capital. Thus non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate, and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1958 and it should be noted that subsequent changes may have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 51 p.c. owned by non-residents but capital subject to foreign control was 57 p.c. These proportions compared with 47 p.c. and 51 p.c., respectively, as recently as the end of 1954. In the field of petroleum and natural gas, non-resident ownership and control each amounted to 64 p.c. and 75 p.c., respectively, at the end of 1958 whereas at the end of 1954 non-resident ownership and control had amounted to 60 p.c. and 69 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 56 p.c. and 60 p.c., respectively, compared with 53 p.c. and 51 p.c. in 1954. However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence non-resident ownership of business as a whole, including manufacturing, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 34 p.c. in 1958 (the last year for which the calculation has been made). But, in the same years, companies subject to non-resident control increased from 25 p.c. to 32 p.c. their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

The petroleum and natural gas industry, including exploration and development, refining, merchandising, pipelines and other distribution facilities, has been the largest single recipient of capital inflows in the postwar period, accounting directly for far more than one-half of the inflow of United States capital for direct investment in Canada. By the end of 1958, investments in Canadian petroleum concerns controlled in the United States made up 69 p.c. of the total. Another 6 p.c. of the investment was controlled in overseas countries. Investments owned in the United States and overseas were 57 p.c. and 7 p.c., respectively, of the total.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled in the United States. Such establishments having an investment of $1,000,000 or more accounted for about 30 p.c. of Canadian manufacturing production in 1953 and 21 p.c. of employment in that field. These ratios in non-resident-controlled plants were considerably higher than in 1946—the previous year for which a study of this kind was made.

In some industries the proportions of production and employment in plants controlled in the United States were much higher than this. Automobiles, for example, are mainly produced in United States-controlled plants, but this is exceptional. Among other industries where well over one-half of the production is in United States-controlled firms are the smelting and refining of non-ferrous metals, petroleum refining, rubber products, and motor-vehicle parts. In several major industries like electrical apparatus and supplies and non-ferrous metal products the distribution of control between Canadian and United States-controlled companies is more evenly divided. In other industries the non-resident share is large although less than one-half the total. These include pulp and paper, other paper products, chemicals, medicinal and pharmaceutical products, sheet-metal products, and certain branches of the machinery industry.

There are, however, many industries where the largest part of production has been in Canadian-controlled plants. Prominent among these are such important branches of industry as primary iron and steel, and some other subdivisions of the iron and steel industry, textiles, clothing, and divisions of the foods and beverages industry, such as bakery products, beverages and dairy products. But even in some of these industries changes in ownership and control have been occurring in recent years.

14.—Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1939-60

NOTE.—Totals are rounded and may not represent the sum of their components.

[1] Includes some investments held for residents of other countries.

Canadian Assets Abroad.—While there has been a great growth in non-resident investment in Canada and in the balance of indebtedness to other countries, it will be noted that Canadian assets abroad, shown in Tables 17 and 18, have continued to rise in value each year. These now represent a larger proportion of liabilities abroad than was the case before World War II, but more than half of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the war and early postwar years. In 1959 the government credits outstanding had a value of $1,451,000,000 while official holdings of exchange amounted to $1,786,000,000 in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank, the International Development Association, the International Finance Corporation and the International Monetary Fund which, by March 1961, amounted to $73,700,000, $8,500,000, $3,500,000 and $543,700,000, respectively, a substantial part being offset by liabilities to these institutions.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. Private long-term investments abroad by Canadians in 1959 were made up of direct investments of $2,304,000,000 and portfolio investments of $1,141,000,000. More than two-thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have grown rapidly and are found in many fields, among which the beverage and farm implement industries are particularly noteworthy.

Private investments in overseas countries are widely distributed. About one-half of the total in 1960 were located in Commonwealth countries, with slightly less in the United Kingdom than in the remainder of the Commonwealth. Most of the direct investments in the United Kingdom were in industry, while in other Commonwealth countries there were investments in mining and petroleum as well as in industry. In foreign overseas countries the largest part is in the countries of Latin America where Canadian holdings in public utilities are substantial.

17.—Canadian Assets Abroad, 1939, 1948 and 1955-59

Note.—Excludes investments of insurance companies and banks, Canada's subscriptions to international financial institutions and short-term assets, other than official holdings of gold and foreign exchange. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

PART I.—CURRENCY AND BANKING*

Section 1.—The Bank of Canada

The Bank of Canada is Canada's central bank. It was incorporated under the Bank of Canada Act in 1934 and commenced operations on Mar. 11, 1935. The Act of Parliament which established the central bank charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it certain specific powers for discharging this responsibility. Through the exercise of these powers the Bank of Canada determines broadly the combined total of the basic forms of Canadian money held by the community—currency outside banks plus deposit balances in chartered bank accounts.

By virtue of the provisions of the Bank of Canada Act, which enable the central bank to increase or decrease the total amount of cash reserves available to the chartered banks as a group, the Bank of Canada is able to determine broadly the over-all level of the total assets and deposit liabilities of the group, and hence of the combined total of currency and bank deposits. The Bank Act requires that each chartered bank maintain a minimum amount of cash reserves in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. This minimum requirement is 8 p.c. of the bank's total Canadian dollar deposit liabilities on a monthly average basis. The ability of the chartered banks as a group to expand their total assets and deposit liabilities therefore depends on the level of total cash reserves. An increase in cash reserves will encourage the banks to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

---

* Except where otherwise indicated, this material has been revised by the Research Department of the Bank of Canada.

The chief method by which the Bank of Canada can affect the level of cash reserves of the chartered banks, and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in reserves of the chartered banks and makes it necessary for them to reduce their assets and deposit liabilities.

The influence that the Bank of Canada has on credit conditions and hence on economic behaviour stems from its ability to determine broadly the level of total holdings of currency and chartered bank deposits. The trend of total holdings of these forms of money can have an influence on liquidity generally, including effects on interest rates and bond prices and the availability of credit, and on expectations regarding future financial and economic trends, all of which have some effect on decisions to spend or to save. However, many factors other than changes in the money supply also have important influences on financial and economic developments, such as: the state of economic conditions and prospects outside Canada; the competitive strength of Canadian business enterprises both at home and abroad; the character of the investment decisions and price and wage policies in domestic industries; the skills and degree of mobility of labour; and the nature of public policies at all levels of government with regard to such matters as expenditure, taxation, subsidies and the regulation of industry.

In forming its judgments in the light of changing circumstances as to whether its operations should be such as to facilitate an increase or induce a decrease in the supply of money or to hold it more or less constant, the Bank of Canada is bound by criteria laid down by Act of Parliament in the preamble to the Bank of Canada Act of 1934. In addition to the broad directive to the Bank "to regulate credit and currency in the best interests of the economic life of the nation", and "generally to promote the economic and financial welfare of the Dominion", it is also prescribed that the Bank should endeavour "to mitigate by its influence fluctuations in the general level of production, trade, prices and employment as far as may be possible within the scope of monetary action". Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing state of the economy as reflected in the complex pattern of economic and financial developments.

While the Bank of Canada has the power to determine the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. That depends on the wishes of the public, since deposits can be converted freely into notes and coin and back again. Nor does the Bank have any direct control over the growth of other forms of money or of close substitutes for money as a store of wealth in liquid form, of which there are many varieties in Canada—mainly deposit balances in savings institutions other than chartered banks and short-term securities issued by governments and corporations.

The cash reserve system in Canada, which is similar to that in a number of other countries, while placing the central bank in a position where it can determine within broad limits the total amount of chartered bank assets and deposits, leaves the allocation of bank credit and other forms of credit to the private sector of the economy. Each chartered bank can attempt to gain as large a share as possible of the total cash reserves by competing for deposits. Each bank determines how its assets will be distributed, for example, between various kinds of securities and loans to various types of borrowers. The Bank of Canada has no power to direct banks or other lenders to make funds available to certain groups or in certain regions on the same terms or on different terms than to other groups or in other regions. The influence of the central bank—based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securities—is both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are set forth in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938 and 1954. Some of these powers are outlined below.

The Bank may buy and sell securities issued or guaranteed by Canada or any province, short-term securities issued by the United Kingdom, treasury bills or other obligations of the United States, and certain classes of short-term commercial paper. The Bank is authorized by the Industrial Development Bank Act to purchase bonds and debentures issued by the Industrial Development Bank. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange. The Bank may accept deposits that do not bear interest from the Government of Canada, the government of any province, any chartered bank or any bank to which the Quebec Savings Bank Act applies. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada.

The Bank has the sole right to issue paper money for circulation in Canada. Details regarding the note issue are given on p. 1110.

The Bank of Canada may vary the minimum cash reserve requirement of the chartered banks between 8 p.c. and 12 p.c. of their Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum notice period of one month before each increase becomes effective and that any increase is not more than 1 p.c. during any one month. When this legislation became effective on July 1, 1954 the requirement was 8 p.c. and it has since remained at that level. (Prior to July 1, 1954, each chartered bank was required to maintain at all times cash reserves equal to not less than 5 p.c. of its Canadian dollar deposit liabilities; in practice the chartered banks as a group normally worked to a ratio of about 10 p.c.)

The Bank may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge or hypothecation of certain classes of securities. Loans or advances on the pledge or hypothecation of readily marketable securities issued or guaranteed by Canada or any province may be made to the Government of Canada or the government of any province for periods not exceeding six months. Other loans may be made to the Government of Canada or the government of any province in amounts not exceeding a fixed proportion of such government's revenue; such loans must be repaid before the end of the first quarter after the end of the fiscal year of the borrower.

The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances; this rate is known as the Bank Rate. Since Nov. 1, 1956 the Bank Rate has been established weekly at a fixed margin of $\frac{1}{4}$ of 1 p.c. above the latest weekly average tender rate for 91-day treasury bills.

Sect. 23 of the Bank of Canada Act provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its outstanding notes and deposit liabilities. This requirement was suspended in 1940 when, under the terms of the Exchange Fund Order, the Bank's gold holdings were transferred to the Exchange Fund Account to form part of Canada's official gold and United States dollar reserves. The Currency, Mint and Exchange Fund Act passed in 1952 provides that, notwithstanding Sect. 23 of the Bank of Canada Act, the Bank of Canada is not required to maintain a minimum or fixed ratio of gold or foreign exchange to its liabilities unless the Governor in Council prescribes otherwise.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor

General in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one Director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The Governor is the chief executive officer of the Bank and Chairman of the Board of Directors. The Governor has the power to veto any action or decision of the Board of Directors or of the Executive Committee but such veto is subject to confirmation or disallowance by the Governor General in Council. In the absence of the Governor, the Deputy Governor, who is a member of the Board, exercises all the powers and functions of the Governor.

The capital of the Bank is $5,000,000 and is held entirely by the Minister of Finance. The Bank of Canada Act as amended in 1954 provides that each year 20 p.c. of the Bank's annual profits (after provision for depreciation in assets, pension funds and such matters) shall be allocated to the Rest Fund until the Rest Fund reaches an amount five times the paid-up capital of the Bank and the remainder shall be paid to the Receiver General and placed to the credit of the Consolidated Revenue Fund. At the end of 1957, the Rest Fund of the Bank reached its maximum of $25,000,000 so that, since that date, the whole of the Bank's profits have been transferred to the Receiver General.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown. The agencies are concerned chiefly with the functions of the Bank as fiscal agent for the Government of Canada and with the issue and redemption of currency. The Industrial Development Bank, which is described on the following page, is a subsidiary of the Bank of Canada.

The Bank of Canada Act requires that statements of the assets and liabilities of the Bank on each Wednesday and on the last day of each month be published in the *Canada Gazette*. A summary of the statements as at Dec. 31, 1957-60, appears in Table 1.

1.—Assets and Liabilities of the Bank of Canada, as at Dec. 31, 1957-60

The Industrial Development Bank.*—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

> "To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada. The $25,000,000 capital stock of the Bank (completely paid up) was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:—

(1) lend money or guarantee loans;
(2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
(3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

Industrial enterprises as defined by the Act (amended in 1956)* include: (1) manufacturing, processing, assembling, installing, overhauling, reconditioning, altering, repairing, cleaning, packaging, transporting or warehousing of goods; (2) logging, operating a mine or quarry, drilling, construction, engineering, technical surveys or scientific research; (3) generating or distributing electricity or operating a commercial air service, or the transportation of persons, or (4) supplying premises, machinery or equipment for any business mentioned in (1), (2) or (3) under a lease, contract or other arrangement whereby title to the premises, machinery or equipment is retained by the supplier.

The Bank may accept any form of collateral security against its advances, including real property. It is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has offices in the following cities: Halifax, Saint John, Quebec, Montreal, Ottawa, Toronto, London, Sudbury, Winnipeg, Regina, Calgary, Edmonton and Vancouver.

---

* Since this material was prepared, the Industrial Development Bank Act was amended (SC 1960-61, c. 50), increasing the authorized capital of the Bank from $25,000,000 to $50,000,000, the borrowing authority of the Bank from three to five times the aggregate amount of its paid-up capital and Reserve Fund, and the permissible liabilities of the Bank above $200,000 from a maximum of $75,000,000 to a maximum of $200,000,000. The definition of "industrial enterprise" was extended to include any industry, trade or other business undertaking of any kind.

2.—Assets and Liabilities of the Industrial Development Bank, as at Sept. 30, 1957-60

[1] Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

Section 2.—Currency

Subsection 1.—Notes and Coinage

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of $1, $2, $5, $10, $20, $50 and $100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of $1,000 to $50,000 denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

3.—Bank of Canada Note Liabilities and Other Notes in Circulation, as at Dec. 31, 1951 and 1958-60

Denomination	1951	1958	1959	1960

[1] Total issue less notes held by chartered banks.

[2] Based on estimates of population as given at p. 165.

Coinage.*—Under the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency, Mint and Exchange Fund Act for the payment of any amount; in the case of silver coins for the payment of an amount up to $10; nickel coins for payment up to $5; and bronze coins up to 25 cents.

1959	123,344,059	9,865,012	549,237	3,454,209	16,150,222	153,362,739	8.68
1960	136,710,958	11,599,263	549,090	3,452,876	16,895,953	169,208,140	9.38

[1] Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944. [2] Based on estimates of population as given at p. 165.

The Royal Canadian Mint.*—The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act 1870 and opened on Jan. 2, 1908. In 1931 (RSC 1952, c. 240) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. From 1858 the British North American provinces, and later Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, England. Before that date, coins were mainly British, United States and Spanish. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica.

Before 1914 only small quantities of gold bullion were refined but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly 20,000,000 oz.t. of South African gold were treated on Bank of England account. The subsequent development of the gold mining industry in Canada resulted in gold refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately 400 oz.t. each or, for those mines authorized to sell gold in the open market, the bullion is shipped according to instructions from the mines. The fine silver extracted from the rough gold is generally used for coinage purposes.

[1] Less total float, i.e., cheques and other items in transit.

[2] The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal savings deposits" to "other notice deposits" as at Sept. 30, 1957, in the returns of the banks to the Department of Finance; from that date the figures are thus not comparable with those for previous years. The amount of deposits reclassified was approximately $140,000,000.

Section 3.—Commercial Banking

The early history of currency and banking in Canada is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies since Confederation; the last insolvency occurred in 1923.

COMMERCIAL BANKING IN CANADA*

The Canadian commercial banking system consists of eight privately owned banks, chartered by Parliament and operating under the provisions of the Bank Act. Of these eight, five are nation-wide institutions; two operate mainly in the Province of Quebec and in other French-speaking areas and one, a subsidiary of a Netherlands bank, has a branch in each of the three largest cities. At the end of 1960, these banks together operated 5,201 banking offices of which 5,051 were in Canada and 150 abroad. At that date Canada had roughly one banking office for every 3,600 people, compared with one for 4,000 in the United Kingdom and one for 7,300 in the United States. These facts illustrate the chief distinguishing features of the Canadian banking system: a relatively small number of large banks having an extensive network of branches, operating under a single legislative jurisdiction (the Federal Government) and under one detailed and comprehensive statute (the Bank Act). This system thus contrasts strongly with that of the United States, where both State and Federal Governments have power to legislate on banking, where most State laws still contain a variety of restrictions on the operation of branches, and where there is a large number of small banks. It also contrasts in many respect with British banking which (though also operating through a widespread system of branches) is subject to no specific code of banking legislation such as the Canadian Bank Act.

---

* Prepared under the direction of J. Douglas Gibson, General Manager of The Bank of Nova Scotia.

Since the first banks were established during the first quarter of the nineteenth century,* the commercial banking system has developed in response to the changing needs of the Canadian economy, an evolution which is still in rapid progress today. Canadian economic development has been characterized by two main features—successive but by no means continuous periods of rapid geographical expansion of settlement, and a continued dependence on export markets as new natural resources (agricultural land, forests and minerals) were exploited. Thus, Canadian banking has continually had to migrate to new areas and to find appropriate methods of financing new industries and new products; and it has from the beginning possessed a strongly "international" character† with a good deal of emphasis on the financing of foreign trade, on foreign exchange operations, and on correspondent relations with foreign banks. At the same time, as the regional isolation which was so marked in British North America before Confederation has gradually broken down and the economy has been integrated, the Canadian banks, originating in local areas, have become part of a nation-wide banking system, in part by process of amalgamation which was particularly marked in the first twenty-five years of the present century.

Bank Legislation

From the first, banks in what is now Canada sought to operate under Acts of incorporation (charters) passed by the legislatures of the colonies in which they operated. As new banks were incorporated and older ones obtained charter renewals, there developed in the bank charters themselves a quite extensive and fairly uniform code of banking law. This occurred partly because the colonial authorities in Britain (until about 1840) endeavoured to have certain general rules and safeguards inserted in all charters, and partly in response to developing Canadian experience in banking. At Confederation, responsibility for banking and currency was given to the Dominion Government and in 1871 the first general Bank Act was passed. This legislation is subject to review and revision every ten years, a feature that has helped to keep the banking system adapted to the needs of a changing economy.

From this historical process certain characteristic features of the Canadian financial system have emerged—notably the traditional emphasis of the chartered banks on "commercial" banking. The provision of mortgage funds and long-term industrial capital and the performance of trust functions were for the most part left to the other financial institutions which gradually developed. The early banks were established by merchants for merchants. Their note issues provided a badly needed medium of internal exchange and they advanced working capital to finance the processes of trade. The aim was to make lending as far as possible short-term and self-liquidating. The bank charters from the first contained prohibitions against lending on the security of real property, except as secondary or subsequent security. This continued to be a feature of Canadian banking law and was, indeed, well suited to a system where liquidity of assets was very necessary because the banks' liabilities were mainly of a very short-term character, i.e., notes and deposits paid on demand. (The banks' note issues were long the most important part of the circulating medium of the country. They continued to issue notes until after the Bank of Canada was created in 1935, when their note-issuing privilege was gradually withdrawn.) Now, however, exceptions to the rule against lending upon security of real property, incorporated in the Bank Act in 1944 and 1954, allow the banks to participate in government-guaranteed loans to farmers and fishermen and for housing constructed under the National Housing Act, to lend to oil companies on the security of oil "in, under or upon the ground" and production equipment, and to extend their consumer-finance lending by taking chattel mortgages.

Another distinctive feature of Canadian bank lending arrangements is that contained in Sect. 88 of the Bank Act. This, too, is an exception to the rule against lending on the security of goods and property and was developed over a long period to facilitate particular kinds of lending. It enables banks to make advances on the security of natural products and goods, wares and merchandise while they remain in the borrower's possession. These 'pledge' arrangements have facilitated loans to small businesses and farmers and have aided in commercial and manufacturing development, while giving the banks a reasonable degree of protection for their loans.

---

* See introductory paragraph to Section 3.

† The larger Canadian banks have long maintained offices in London and New York. In addition, some Canadian banks for more than half a century have been providing an important part of commercial banking facilities in the Caribbean area. See Table 10, p. 1122.

Today the Bank Act has become a most detailed and comprehensive piece of legislation which provides for the internal regulation and organization of the banks, for the auditing of their accounts, for the ways in which their capital stock may be issued and transferred, their dividends paid, and their affairs settled in case of amalgamation, winding-up or insolvency. In addition it states what cash reserves the banks must keep, what reports they must make to the Government and to the Bank of Canada about their affairs and sets forth a variety of rules governing the conduct of business with the public. The Bank Act also specifies the maximum rate of interest that may be charged on bank loans. (Since the 1944 Bank Act Revision this ceiling has been 6 p.c., replacing the 7-p.c. ceiling that had prevailed since 1871. The reduction came toward the end of a long period of 'easy money' and has not been revised upwards since.) The banks derive their corporate existence from the Act, which states that "each bank enumerated in Schedule A is a body politic and corporate and this Act is its charter"; successive Bank Acts have empowered the banks to do business for a period of ten years, until the next revision of the Act.

Banking Operations

Operating under the Bank Act, the chartered banks at their branches accept deposits from the public, make loans covering a wide range of commercial, industrial, agricultural and consumer activities, deal in foreign exchange, receive and pay out Bank of Canada notes and coin, provide safekeeping facilities, and perform a variety of other services coming within the scope of the general business of banking. The head office of a Canadian bank does not transact ordinary day-to-day business with the public; it performs general administration and policy-making functions, manages the bank's investment portfolio, does its centralized accounting work, and maintains specialized departments devoted to inspection of branch operations, the development of branch office methods, the acquisition of new business, premises, staff, arrangements with foreign banks, advertising, etc. The Head Office, too, is responsible for supervision of branch lending activities, although in recent years, with the great growth in the number of bank branches in all parts of the country, there has been a considerable decentralization of credit supervision in a network of regional offices. Indeed, since World War II there have been a number of important changes in the organization of banking activities. For one thing, mechanization of office work has proceeded rapidly. Concurrently, women, who entered banking in large numbers during the Second World War when male staff joined the services, have become an increasingly important part of bank personnel. Today over 35,000 women account for not far from 60 p.c. of bank employees, compared with some 5,000 before the War who comprised less than 25 p.c. of total staff.

Under its branch system, Canadian banking is able to provide standard banking facilities throughout the country. Every branch, even the smallest, can provide all banking services, and each has behind it the resources of a large bank, which means that lending requirements can be met just as well by a branch in a small town or a suburban branch as in the main branches of a large city. Branch banking also provides an excellent training for Canadian bank officers, through the system of promotion and transfer from branch to branch. Almost without exception, the chief executives of the Canadian banks have grown up in the service and have been trained in this way. And, it should be mentioned, with modern methods and an expanding banking system, opportunities for rapid promotion to the manager level and higher have never been better than in recent years.

The branch system has proved to be most flexible and Canadian banking has been able to keep pace with settlement and economic development even during its periods of most rapid growth. For example, in the fifteen years before the First World War, when the western wheat growing industry was established and the whole economy experienced a boom unparalleled until after the Second World War, there was a tremendous expansion in banking facilities; this continued when the War was over, partly because of keen competition. The number of branches in Canada rose from 555 in 1897 to 4,676 at the end of 1920. This number was not again equalled until 1958; during the 1920's and 1930's the number of branches declined partly because motor transportation brought a general movement of Canadian commercial business to larger centres, but also because of bank amalgamations and particularly because of the need to eliminate duplicate facilities during the difficult times of the depression. Wartime staff problems and other operating difficulties brought some further decline. Since the end of the Second World War, however, with a rapidly expanding economy, sharply rising population and growing urbanization, new branches have again been opening at a very rapid rate. As in the early days of the century, offices have been established along the frontiers of the economy, in new towns, oil fields and mining camps, as well as in the old-established urban centres where industrial and commercial growth have so enlarged the demand for banking services. The banks have also gone out to meet the banking needs of new groups of suburban dwellers, establishing offices in shopping centres and following new trends in architecture to make their premises there and elsewhere as attractive as possible. In all, the number of banking offices in Canada, which was about 3,300 at the end of 1939 and 3,100 at the end of 1945, grew by almost 2,000 in the fifteen postwar years.

As the growth in the number of branches suggests, Canadian banks have been taking full advantage of the expansive postwar atmosphere to extend the volume and variety of their services to industry and to individuals. Indeed, the increased costs involved in the operation of so many new and enlarged branches have been one factor in the banks' endeavours to make complete use of their facilities. Strongly competing for customers, they have offered a wide variety of new deposit arrangements, including new savings programs of various kinds and new forms of chequing accounts, and have greatly broadened their lending activities.

By the end of the War, the banks had experienced more than fifteen years of restricted demand for commercial credit. Loans had declined sharply during the depression and shown only a slightly rising trend during the pre-war years of incomplete recovery and, of course, in the wartime economy bank lending was subject to a variety of restrictive influences. The result was a marked change in the composition of bank assets; by the end of 1945 security holdings accounted for about 55 p.c. of the banks' total assets, compared with a little over 40 p.c. just before the War and only about 15 p.c. in 1930. In the early years of postwar reconstruction, the economic control apparatus created for the War was gradually dismantled. The expansion of the private sector of the economy and the contraction of the government sector was quickly reflected in a shift of bank assets from government securities to commercial loans. Between the end of 1945 and the end of 1950, bank loans in Canadian currency increased from about 21 p.c. to 31 p.c. of total assets. There was, at the same time, a rapid growth in total assets, as the monetary authorities leaned to the side of relatively easy money conditions to stimulate the economy and to ward off the widely anticipated postwar recession. In the five years ended Dec. 31, 1950, total assets expanded from about $7,300,000,000 to $9,400,000,000, almost all of the increase being in Canadian assets.

It was not until the outbreak of the Korean war in June 1950, that the fear of inflation, arising from the heavy demands on Canadian resources, led to the adoption of restraining measures. Since then the banks have experienced substantial changes in their credit-granting capacity, as the country's official monetary policy was adapted to meet changes in business conditions. Alternating periods of ease and restraint have been marked by periods of rapidly rising bank assets followed by levelling-off phases, though never by actual declines.

The Korean boom of 1950-51 was followed, after only a short pause, by the investment boom of 1953-54. Recession in 1954-55 was accompanied by an easy monetary policy, during which the banks built up their liquid assets in the form of government bonds. Then a second and greater investment boom got under way in late 1955, which carried the Canadian economy and the banking system into another period when resources were strained to the limit. At this time new measures of restraint were introduced into the Canadian banking system by the monetary authorities, including an agreed secondary reserve ratio of 7 p.c. in addition to the cash reserves of 8 p.c. already prescribed in the Bank Act Revision of 1954. A further agreement with the Bank of Canada was aimed at restraining term loans for capital purposes* and in 1956 bank loans to instalment finance companies were also put under some restraint. The boom of 1955-57 was followed by a mild recession in 1957-58, moderate recovery in 1958-59 and slackening again in 1960. In this period the banks have not regained the liquidity which characterized earlier postwar recessions, and there has been a growing need to husband resources carefully for the various and growing alternative outlets which developed as the result of economic growth, and of the efforts of both the Government and the banks themselves to provide new uses for bank credit.

One of the first government measures was the Farm Improvement Loan Act of 1944, under which the chartered banks were authorized to make loans to farmers for the purchase of equipment and livestock and for making various improvements to their farm buildings and facilities. These loans are often for sizable amounts (the average in 1960 was about $1,500) and the terms have been gradually extended to a maximum sum of $7,500 outstanding to any one borrower with a maximum period of ten years (four years for implements). The banks are guaranteed against loss up to 10 p.c. of their loans made during the three-year "lending periods", up to a maximum total of loans by all banks. This total is $400,000,000 for the lending period to end in mid-1962. By the end of 1960 the total amount of loans made under this Act was more than $1,000,000,000.

The 1954 Revision of the Bank Act introduced a major change in banking practice, by enabling the banks to acquire mortgages issued under the National Housing Act. Previously, as already mentioned, the banks could acquire the security of real property only to support existing loans. But the very heavy demand for housing finance, produced by the rapid postwar expansion of the Canadian population, led the Government to seek new sources of savings for the housing market, and the Canadian chartered banks are one of the major avenues through which savings are gathered. About 35 p.c. of all NHA mortgage loans in the years 1954-59 were made by the chartered banks. At the end of 1959, the NHA interest rate was raised to 6¾ p.c. and the banks withdrew from this field of lending. Notwithstanding this, by Dec. 31, 1960 they held some $970,000,000 in NHA mortgages, representing about 6 p.c. of total assets.

Another change affecting housing in the 1954 Revision enabled the banks to make Home Improvement Loans under a guarantee system rather similar to the one developed for Farm Improvement Loans. By the end of 1960, Home Improvement Loans amounting to $195,000,000 had been approved and the banks had about $56,000,000 of such loans on their books.

A more recent measure, passed in November 1960, is the Small Business Loans Act, which guarantees, under terms to the banks almost exactly similar to those of the Farm Improvement Loan Act, certain types of bank loan to small businesses for the purposes of making capital improvements to premises and equipment. This provides for loans that do not fall within the usual scope of bank lending to small business, by reason of the term nature of the loan, together with the lack of collateral resources of the borrower. Of course, chartered banks already make loans to small businesses for a great variety of purposes, including many of a medium-term character; indeed, the working capital loan to the small-size or medium-size industry or commercial enterprise is the traditional stock-in-trade business of the chartered banks.

---

* Such loans were almost entirely a postwar innovation in Canadian lending practice, and had increased markedly during the easy-money period of 1954-55. Since 1956, term lending has generally been confined within narrower limits though it is still practised when conditions permit.

Still another area of lending which has expanded greatly in recent years is that of consumer credit. While the banks have always made some personal loans, they have not until recently moved aggressively into the general field of lending to the general public for the purchase of automobiles, consumer durables and debt consolidation. Following the 1954 Bank Act Revision, and partly as a result of the change then made which enabled the banks to take chattel mortgage security, some of the banks have developed extensive consumer credit divisions. Personal loans made by the banks, other than those secured by stocks and bonds and Home Improvement loans, mounted from $420,000,000 at the end of 1957 to $873,000,000 outstanding at Mar. 31, 1961. During this same period, the outstanding total of retail consumer credit granted by others, such as small loans companies, instalment finance companies, and department stores and other retail dealers, increased from $1,970,000,000 to $2,215,000,000. This penetration of the banks into the retail credit field is perhaps the most significant development of the postwar period in the Canadian banking system. It has brought the banks close to the general public in those matters that touch the major financial undertakings of most families—the house, the car, the major appliances, the medical and education expenses.

Outside of Canada, the Canadian banks have continued to expand their branch systems in the Caribbean area, though the two Canadian banks operating in Cuba have found it necessary to withdraw. Elsewhere abroad, the banks have expanded their representation in South America and in Europe. In recent years the growth of an international money market, following the economic recovery in Europe and the restoration of confidence in the stability of the Western economies and their currencies, has led to large movements of Western capital from one centre to another. The Canadian banks have participated extensively in this international money market, mainly through New York and London where most of them maintain large offices.

The postwar growth in bank assets has been accompanied by a substantial increase in total earnings. Earnings per share of capital employed did not increase to the same extent, however, as the banks found it necessary to raise new funds from time to time after 1950 in order to maintain an appropriate relationship between their shareholders' capital and the rapidly rising level of risk assets. The banks have been among the largest issuers of new share capital to Canadians in the postwar period.

Subsection 1.—Statistics of Chartered Banks

Branches of Chartered Banks.—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—the Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amalgamation in 1955 of the Bank of Toronto and the Dominion Bank as the Toronto–Dominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 have reduced this number to eight. The number of branches of chartered banks in each province periodically from 1868 is given in Table 8.

8.—Branches of Chartered Banks, by Province, as at Dec. 31 for Certain Years 1868-1960

Note.—Figures for 1920 and subsequent years include sub-agencies in Canada receiving deposits for the banks employing them; there were 756 such sub-agencies at Dec. 31, 1960.

Financial Statistics of the Chartered Banks.—The classification of chartered bank assets and liabilities was revised by the Bank of Canada Act 1954, so that the statistical series given in the following tables begins with that year. Figures shown in Table 11 prior to July 1954 have been adjusted to comply with the new classification. Month-end data are available from Dec. 31, 1954, to date in the Bank of Canada *Statistical Summary*.

11.—Assets and Liabilities of the Chartered Banks, as at Dec. 31, 1951-60

13.—Canadian Cash Reserves, 1951-60

Note.—For periods prior to July 1954 all figures are daily averages; from July 1954, in accordance with the Bank Act 1954, Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposits are averages of the four consecutive Wednesdays ending with the second last Wednesday in the previous month.

(Millions of dollars)

Year	Cash Reserves			Canadian Dollar Deposit Liabilities[1]	Average Cash Reserve Ratio[2]
	Bank of Canada Deposits	Bank of Canada Notes	Total		
1951	567	225	792	7,759	10.2
1952	606	239	844	8,110	10.4
1953	627	256	883	8,624	10.2
1954—January to June	634	260	894	8,820	10.1
1954—July to December	525	286	811	9,097	8.9
1955	541	293	834	9,915	8.4
1956	548	325	873	10,527	8.3
1957	535	335	870	10,601	8.2
1958	607	336	943	11,452	8.2
1959	648	351	999	12,187	8.2
1960	625	360	985	12,052	8.2

[1] From July 1954 the figures are not adjusted for items in transit and are not strictly comparable with the figures for earlier periods. [2] Prior to July 1, 1954, the statutory minimum requirement was 5 p.c. for each day; since that date it has been a monthly average of 8 p.c.

Liquid Asset Ratio.—In the course of discussions with the chartered banks in November and December 1955, the Bank of Canada urged the adoption of a standard practice regarding the maintenance of a minimum ratio of liquid assets (cash, day-to-day loans and treasury bills) to deposits. The purpose of this suggestion was to establish a working principle of bank operations which would help the central bank in the task of restraining inflationary pressures that might threaten in the future. After discussion the banks agreed to work to achieve, by May 31, 1956, a minimum liquid asset ratio of 15 p.c. which they would endeavour to maintain on a daily average basis from June on. On this basis, fluctuations above or below 15 p.c. might occur from day to day or week to week, but for the month as a whole the average would not be below the target ratio. From June 1956 the banks have maintained a daily average ratio of at least 15 p.c.

14.—Classification of Chartered Bank Deposit Liabilities Payable to the Public in Canada in Canadian Currency, as at Sept. 30, 1959 and 1960

Deposit Accounts of the Public of—	1959			1960

NET ADDITION TO SHAREHOLDERS' EQUITY	85.5	79.7	68.6	124.7	78.0

[1] Realized profits and losses on disposal of securities are included in operating earnings. [2] Before provision for income taxes, losses, and transfers to inner reserves. [3] Includes taxes other than income taxes. [4] Profits and losses on sale of fixed assets and adjustments relating to prior years. [5] After amounts retransferred to rest account. [6] Includes income taxes on taxable portion of additions to and amounts retransferred from inner reserves, and foreign income taxes.

Cheque Payments.—A monthly record of the amounts of cheques charged to customer accounts at all chartered bank offices in 35 major clearing-house centres of Canada is available from 1924. Except for a minor setback in 1938, the value of cheques cashed shows a continuously upward trend from 1932, the low point of the depression years. The total of $269,619,054,000 in 1960 was a record, 772 p.c. greater than in 1938; the increase equalled the gain in gross national product during the same period. The advance was well distributed throughout Canada's five economic areas. British Columbia showed the largest gain with an increase of 830 p.c. Ontario was second with an advance of 808 p.c., followed by the Prairie Provinces, the Atlantic Provinces and Quebec.* As compared with 1959, all five economic areas showed gains, with Ontario accounting for nearly 36 p.c. and Quebec 39 p.c. of the $20,749,702,486 advance.

---

* St. John's, Nfld., was included in the 1960 figure but not in the 1938 data. Excluding this centre in 1960 the ranking would be the same as above, except that Quebec would precede the Atlantic Provinces.

Value of cheques cashed in 24 of the 35 centres was higher in 1960 than in 1959. Payments in the two leading centres reached all-time highs, Toronto advancing by 7.8 p.c. and Montreal 13.7 p.c. In the same comparison, Winnipeg rose 11.3 p.c. and Vancouver 3.0 p.c.

17.—Cheques Cashed at 35 Clearing-House Centres, 1956-60

[1] Includes some debits reported in preceding years.

Subsection 2.—Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Newfoundland, Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec—the Montreal City and District Savings Bank and La Banque d'Économie de Québec—established under federal legislation and reporting monthly to the federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

Post Office Savings Bank.—The Post Office Savings Bank was established under the Post Office Act of 1867 (SC 1867, c. 10) to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1958-61, follow. Figures back to 1868 are available in previous editions of the Year Book.

Item	*1958*	*1959*	*1960*	*1961*

Provincial Government Savings Banks.—Institutions for the deposit of savings are operated by the Provincial Governments of Newfoundland, Ontario and Alberta.

Newfoundland.—The Newfoundland Savings Bank was established in 1834 and the following is a summary financial statement for the years ended Mar. 31, 1958-61.

Item	*1958*	*1959*	*1960*	*1961*
	$	$	$	$
Interest on investments, etc	951,295	974,296	1,066,382	1,066,724
Net rental income	3,611	2,585	2,949	700
Other income	—	—	1,268	1,400
Profit or loss on sale of investments	−86,680	−116,181	−185,000	−164,373
Less interest on deposits	758,257	766,786	773,932	782,699
Less expenses	65,597	74,009	77,966	93,454
Less transfer to reserves	31,137	6,307	6,366	6,436
Net Income	13,235	13,598	27,335	21,862

The number of accounts decreased from 34,791 at Mar. 31, 1960 to 34,176 at the same date of 1961; deposits on the other hand, were slightly higher in 1961 at $27,851,715 compared with $27,545,371 a year earlier. The interest rate payable on deposits of private individuals, trust funds and estates is 3 p.c. per annum and on deposits of corporations 1¾ p.c. per annum.

Ontario.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of 2¼ p.c. and 2¾ p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1961 were $77,000,000 and the number of depositors was approximately 95,000. Twenty-one branches were in operation throughout the province.

Alberta.—Savings deposits are accepted at 51 Provincial Treasury Branches throughout Alberta. The total of these deposits at Mar. 31, 1960 was $29,510,171, payable on demand and bearing interest at 2¾ p.c. per annum. Authority has been given for the issue by the Provincial Treasury of savings certificates after Jan. 1, 1960 on the following basis: demand certificates bearing interest at 2¾ p.c. in denominations of $10, $25, $50, $100, $500, $1,000 and up; 5½-year certificates bearing interest at 4½ p.c. in denominations of $25, $50, $100, $500, $1,000 and up.

Quebec Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1961, a paid-up capital and reserve of $10,000,000, savings deposits of $252,153,230 and total liabilities of $263,076,841. Total assets amounted to $263,076,841, including $154,001,507 of federal, provincial, municipal and other securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, had, at Mar. 31, 1961, savings deposits of $44,182,138 and a paid-up capital and reserve of $3,000,000. Liabilities amounted to $54,625,133 and total assets to a like amount.

The following statement shows the combined savings deposits in the Montreal City and District Savings Bank and La Banque d'Économie de Québec for the years ended Mar. 31, 1952-61. Figures back to 1868 are available in previous editions of the Year Book.

Year	*Deposits*
	$
1952	200,342,385
1953	214,122,001
1954	219,372,081
1955	237,816,198
1956	256,526,482
1957	255,000,311
1958	266,585,424
1959	279,626,478
1960	272,614,366
1961	296,335,368

Credit Unions.—Credit unions are incorporated under provincial law to enable groups of people with a common bond of association to pool their savings. The bond of association may be membership in a parish, club, lodge or labour union, that of employment in a plant, industry or department, or that of residence in a rural or a well-defined urban community. The figures of Table **18** show the growing importance of credit unions as savings and loan institutions in Canada. During the ten years 1950-59 the number of credit unions chartered increased by 54 p.c., the number of members in reporting organizations by 127 p.c. and the assets of reporting organizations by 271 p.c., the latter passing the billion-dollar-mark for the first time in 1958.

Quebec holds the lead in the Canadian credit union movement, having almost half of the total membership of all credit unions across the country. Ontario has the largest number of credit unions chartered but total membership and assets in that province are much lower than in Quebec. All provinces except Prince Edward Island shared in the increase in membership reported for 1959.

About 37 p.c. of the credit unions in Canada are rural, although there is some variation as to type in different areas of the country. In the Atlantic Provinces, Quebec and Saskatchewan the credit unions are predominantly rural. In Ontario the occupational type of union accounted for 63 p.c. of the total in 1959 and occupational credit unions also lead in Alberta and British Columbia. In Manitoba, rural and occupational types are about equal. Recently the greatest gain has been shown in the occupational group.

Loans are granted to members for provident and productive purposes from the accumulated pooled savings and are mostly secured by personal notes. Loans to members in 1959 amounted to $470,000,000, at interest rates of 1 p.c. per month or less on the unpaid balance. Savings, which include shares and deposits, reached a total of $1,056,000,000. There were 27 central credit unions in 1959 having the main purpose of acting as credit unions for credit unions, namely, to receive deposits from and make loans to individual credit unions. These centrals are incorporated under provincial legislation to facilitate the flow of funds to credit unions that cannot meet the demand for local loans. Some of these central credit unions admit co-operative associations to membership but most of them limit their membership to credit unions.

The Canadian Co-operative Society serves as a central credit union for provincial centrals and co-operatives all across Canada.

Section 4.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870, was defined as 15/73 of the British gold sovereign.* That is, the par rate of exchange between the dollar and the pound sterling was fixed at $4.866, making the Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under $2 per thousand.

---

* The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

On the outbreak of World War I, Canada and the United Kingdom suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at $4.76 in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of the United Kingdom, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

From 1915 to the end of 1917 fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919 the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as $3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After the United Kingdom resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until the United Kingdom abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933, both currencies had reached a premium in New York. Meanwhile in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at $35 per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, the United Kingdom and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of $4.02½ and $4.03½, respectively, in terms of the U.S. dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control† in Canada and established fixed buying and selling rates of $1.10 to $1.11 for the U.S. dollar and $4.43 to $4.47 for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to $1.10½ and $4.45, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of $1.00 to $1.00½ and for sterling $4.02 to $4.04. These rates continued in effect until Sept. 19, 1949 when, following a 30.5-p.c. reduction by the United Kingdom in the value of sterling to \$2.80 U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at \$3.07¼ and \$3.08¾ on the basis of the New York cross rate.

---

* Noon quotations. Daily highs and lows may have exceeded these rates.

† The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in previous editions of the Year Book.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2. Since then the rate has been determined within the market for foreign exchange.

Until Dec. 14, 1951, this policy was carried out within the framework of exchange control. On that date the Foreign Exchange Control regulations were revoked by the Governor in Council and new regulations were passed which exempted all persons and transactions from the various requirements of the Foreign Exchange Control Act. These actions terminated exchange control in Canada and the Foreign Exchange Control Act was repealed in 1952.

The movements of the U.S. dollar in Canadian funds from January 1953 to mid-1961 are shown in Table **20**.

[1] Does not include \$18,200,000 in U.S. funds borrowed in the U.S. in August 1949 by the Government of Canada and set aside for the purpose of retiring an equal amount of certain securities payable in U.S. dollars on Feb. 1, 1950.

[2] On Oct. 1, 1959, \$62,500,000 representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund .

PART II.—MISCELLANEOUS COMMERCIAL FINANCE

Section 1.—Loan and Trust Companies*

Canadian loan and trust companies, registered with either the federal or provincial governments, operate under the Loan and Trust Companies Acts (RSC 1952, cc. 170 and 272) and corresponding provincial legislation.† Although statistics of provincially registered companies are not collected in detail, it is estimated that more than 95 p.c. of the business of such companies is represented in the figures of this Section, so that they may be accepted as fairly inclusive and representative of the volume of business transacted.

The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures: total assets of such companies for the years 1958 and 1959 amounted to $605,373,501 and $671,508,632, respectively, which amounts include mortgage loans of $456,689,853 and $509,669,369, respectively; thus, the resulting percentages of mortgages to total assets for those years were approximately 75 p.c.

Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stocks and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment but the investing and lending of such deposits and of actual trust funds are restricted by law. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from $154,202,165 in 1928 to $1,079,254,305 in 1959. In the former year the total of estates, trust and agency funds administered amounted to $1,077,953,643 and in 1959 to $6,902,512,833.

A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters. The statistics of Tables **2**, **3** and **4** refer to those companies incorporated both by the Government of Canada and by the provinces. Included in the statistics of federal companies are data of loan and trust companies incorporated by Nova Scotia and brought by the laws of that province under the examination of the federal Department of Insurance, as well as data for trust companies in New Brunswick and Manitoba.

---

* Revised under the direction of the Superintendent of Insurance for Canada, Ottawa.

† An outline of the development of loan and trust companies in Canada from 1844 to 1913 is given in the 1934-35 Year Book, p. 993. The federal laws relating to their operation were revised in 1914.

[1] Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba which, by arrangement, are inspected by the federal Department of Insurance. [2] Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included with federal companies.

Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders*

Licensed small loans companies and licensed money-lenders are subject to the provisions of the Small Loans Act (RSC 1952, c. 251) as amended by c. 46 of the Statutes of 1956, an enactment of the Parliament of Canada regulating personal loans not in excess of $1,500 made on the security of promissory notes of borrowers. Most of these notes are additionally secured by endorsements or chattel mortgages. The Act permits, in the case of licensed lenders, maximum rates of cost of loan, including charges of every kind, of 2 p.c. per month on that portion of the unpaid balance of a loan not exceeding $300, 1 p.c. per month on that portion of the balance exceeding $300 but not exceeding $1,000, and one-half of 1 p.c. per month on any remainder of the balance exceeding $1,000. The maximum rate permitted to be charged by an unlicensed lender is 1 p.c. per month. Prior to Jan. 1, 1957, the scope of the Act extended only to loans of $500 and under and the maximum rate permitted to be charged by licensed lenders was 2 p.c. per month and by unlicensed lenders 12 p.c. per annum. The small loans companies—four in number—were incorporated by special Acts of the Parliament of Canada, the first such company commencing business in 1928. Money-lenders, of which there are 77, are made up of companies otherwise incorporated and include a few partnerships and individuals. Table **5** gives the combined financial experience of small loans companies and licensed money-lenders for the years 1956-59.

---

* Further details are given in the Department of Insurance report *Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1959.

[1] Commencing Jan. 1, 1957, the Small Loans Act became applicable to loans of $1,500 or under made on and after that date.

The combined companies showed a substantial increase in the amount of business for 1959 as compared with 1958. While the number of small loans made to the public during the year 1959 decreased from 1,107,500 to 1,097,226, or by 1 p.c., the amount of such loans rose from $477,705,515 to $526,682,817, or by 10 p.c. The average small loan made was approximately $480 in 1959 compared with $431 in 1958. At the end of 1959 small loans outstanding numbered 920,747 for an amount of $360,019,949 or an average $391 per loan. These figures compare with 892,111, $315,827,669 and $354, respectively, for 1958.

Gross profit of small loans companies, before income taxes and before taking into account any increase or decrease in reserves for bad debts, increased from $22,400,025 in 1958 ($17,669,262 being the profit on small loans and $4,730,763 the profit on business other than small loans) to $24,767,979 in 1959 ($18,857,377 being the profit on small loans and $5,910,602 the profit on business other than small loans).

Section 3.—Sales of Canadian Bonds*

Previous editions of the Year Book have traced sales of Canadian bonds to the end of 1959. This review continues a record of new issues placed in 1960 with some reference to developments in the first six months of 1961.

Excluding all financing of less than one year, the grand totals of new security issues placed amounted to $4,215,103,238 in 1960 compared with $4,342,890,839 in 1959. When these totals are broken down into various classifications, the following details result: federal and guaranteed financing amounted to $2,627,977,950 in 1960 compared with

---

* Prepared by E. C. Gould, Financial Editor, *The Monetary Times.*

$2,896,050,600 in 1959; provincial and guaranteed financing amounted to $616,025,000 in 1960 compared with $653,001,875 in 1959; municipal financing (including parochial and miscellaneous) amounted to $472,214,288 in 1960 compared with $424,813,364 in 1959; corporation financing amounted to $498,886,000 in 1960 compared with $369,025,000 in 1959.

Details follow on various classifications of new bond sales with relevant comment. As with previous calculations, the federal totals have excluded all refunding issues and new financing of less than one year. In this category, treasury bill sales totalled $6,490,000,000 in 1960 and $6,947,944,000 in 1959. If these figures were added to federal financing, totals would be increased to $10,705,103,238 and $11,290,834,839, respectively.

Included in the federal total for 1960 is an amount of $908,977,950 for Series 15, Canada Savings Loan, as reported for subscriptions received to Apr. 30, 1961. This Series is dated Nov. 1, 1960 to mature on Nov. 1, 1970. The first four coupons, due Nov. 1, 1961, 1962, 1963 and 1964, carry rates at 4 p.c., 4¼ p.c., 4½ p.c., and 4¾ p.c., respectively. Remaining coupons, due on Nov. 1 for the next six successive years, carry a rate of 5 p.c. Average yield, if held to maturity, is 4.71 p.c. and limits per individual were reduced to $10,000 from $20,000 for Series 14 of 1959.

The 1960 Series retained familiar features of previous issues, such as a privilege of redemption at full face value, plus accrued interest at any time. An entirely new provision, however, permitted registration in estate names or in the names of trustees under a will or administrators of an estate. Although the rate to maturity was less than a record high in 1959, the relative decrease was considered small when compared with yield changes in other Government of Canada bonds over the same period.

6.—Sales of Canada Savings Loans, 1946-60

NOTE.—Figures for the issues 1946-59 are for the entire loans, i.e., either to the year-end or to the closing date within the year or in the subsequent year. The figure for Series 15 (1960) is to Apr. 30, 1961 and is subject to revision when complete returns are available.

Series	Applications	Limits per Individual	Total Sales
	No.	$	$
Series 1, 1946	1,248,444	2,000	535,285,550
Series 2, 1947	910,742	1,000	287,733,100
Series 3, 1948	862,686	1,000	260,491,150
Series 4, 1949	1,015,579	1,000	320,200,000
Series 5, 1950	963,048	1,000	285,600,000
Series 6, 1951	986,900	5,000	394,642,400
Series 7, 1952	982,274	5,000	380,761,100
Series 8, 1953	1,267,506	5,000	850,548,900
Series 9, 1954	1,175,264	5,000	800,540,900
Series 10, 1955	1,180,000	5,000	729,100,000
Series 11, 1956	1,242,250	5,000	853,810,150
Series 12, 1957	1,293,163	10,000	1,216,711,900
Series 13, 1958	1,179,198	10,000	923,697,450
Series 14, 1959	1,486,794[r]	20,000	1,536,050,600[r]
Series 15, 1960	1,230,686	10,000	908,977,950

Also included in the federal total for 1960 is an amount of $250,000,000 guaranteed by the Federal Government. This amount represents two issues of non-callable bonds on behalf of the Canadian National Railways, both sold in September The first amounted to $175,000,000 at 5 p.c., maturing on Oct. 1, 1987 and the second to $75,000,000 at 4½ p.c., maturing on Apr. 1, 1967.

Provincial financing at $616,025,000 in 1960 combined totals for both direct and provincially guaranteed new sales. Of this total, $250,000,000 was direct and the remaining $366,025,000 represented provincial guarantees for utility, municipal and parochial purposes. Of a comparable total of $653,001,875 in 1959, $277,180,000 represented direct provincial financing and $375,821,875 was of a guaranteed nature.

Direct provincial entries into the bond market during 1960 were made by the provinces of Saskatchewan, Manitoba, Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland, as follows:—

Province	*Month*	*Amount*
		$
New Brunswick	February	15,000,000
Saskatchewan	February	7,500,000
Manitoba	March	15,000,000
Manitoba	March	5,000,000
Newfoundland	March	6,000,000
Nova Scotia	April	10,000,000
Ontario	April	60,000,000
Manitoba	April	20,000,000
Prince Edward Island	May	4,000,000
Saskatchewan	June	7,500,000
Nova Scotia	June	10,000,000
Quebec	July	50,000,000
Nova Scotia	September	10,000,000
Newfoundland	September	5,000,000
Quebec	October	10,000,000
Manitoba	December	15,000,000
TOTALS		250,000,000

In the field of direct municipal financing (exclusive of municipal issues guaranteed by various provinces), the market for new flotations was up to $472,214,288 in 1960 from $424,813,364 in 1959. Exclusive of loans for parochial and other educational purposes ($85,320,000 in 1960 and $73,804,100 in 1959), these issues amounted to $386,894,288 in 1960 and $351,009,264 in 1959. Among the largest municipal borrowers in 1960 were Vancouver, Regina, Saskatoon, Winnipeg, Toronto, Hamilton, London, Ottawa, Montreal, Quebec City and Halifax.

Over the past few years a fairly stable volume of new bond sales for federal, provincial and municipal financing was recorded but new corporation issues showed a marked decline, principally attributed to a general slow-down of business activity which created considerable concern on the corporation market. In 1960, they totalled $498,886,000 compared with $369,025,000 in 1959, $729,255,000 in 1958 and $1,024,604,100 in 1957.

Although the dollar total of corporation bond sales during 1960 was up somewhat from 1959, the volume was low. But because of their scarcity, new issues were mostly taken up as soon as they came on the market. Largest corporate borrowers were the Bell Telephone Company of Canada, T. Eaton Acceptance Company Limited and British Columbia Electric Company Limited.

Bell Telephone borrowed for sizable amounts in the months of March, June and December of 1960. The first of these issues was for $25,000,000, 6¼ p.c., first-mortgage bonds, maturing on Apr. 1, 1974; the second was for $50,000,000, 5¾ p.c., first-mortgage bonds, maturing on Aug. 2, 1982; and the third was for $35,000,000, 6 p.c., first-mortgage bonds, maturing on Jan. 2, 1986.

Both T. Eaton Acceptance and British Columbia Electric entered the bond market during the month of March. The former issue was for $17,500,000, 6¾ p.c., sinking fund debentures, maturing on Apr. 1, 1980 and the latter was for $30,000,000, 6½ p.c., first-mortgage bonds, maturing on Apr. 1, 1990.

The total of all new Canadian bond sales financed in the United States amounted to $283,169,000 during 1960, down from $472,856,431 in 1959, $486,950,621 in 1958 and $606,876,100 in 1957. Of the 1960 total, $92,000,000 was for direct and guaranteed provincial issues, $110,909,000 was for municipal issues and $80,260,000 for corporation issues. These totals compared with $310,200,000, $112,356,431 and $50,300,000, respectively, in 1959. An additional amount at $13,600,000 (comprised of $9,100,000 provincial and $4,500,000 municipal issues) was sold elsewhere than in Canada or the United States during 1960.

Prices rose and interest rates dropped with few interruptions on the bond market during most of 1960. In September, however, the general situation changed rapidly for a short time after an amount of $250,000,000 was floated for the Canadian National Railways. While this issue had first appearances of a sell-out, concern later developed that it had not been firmly distributed. This concern signalled an over-all drop in prices with some declines by as much as eight points. Toward the end of the year, the situation began to take on a more orderly appearance with a return to higher prices and lower yields. This period lasted until Dec. 20 when the federal Budget imposed a 15-p.c. withholding tax on all new issues purchased by non-residents. As far as market changes were involved, it was felt that two important trends would develop because of the new tax measure: (1) the Canadian market would be called upon to supply a greater percentage of new financing, and (2) there would be an upward pressure on interest rates unless measures were taken to expand money supply.

During the early part of 1961 (based on calculations made up to May 15, 1961), prevailing trends did not conform entirely to these expectations. On the one hand, they did indicate a greatly reduced total of Canadian bond sales in the United States. On the other hand, they gave little indication of an upward pressure on interest rates because of increased financing at home. In general, new federal and provincial sales were somewhat higher while municipal and corporation sales were down.

7.—Sales of Canadian Bonds, by Class of Bond and Country of Sale, 1951-60

(SOURCE: *The Monetary Times*)

NOTE.—Figures from 1904 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

Subsection 3. Casualty Insurance Transacted in Canada by Companies under Federal Registration	1156
Subsection 4. Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration	1156
SECTION 3. GOVERNMENT INSURANCE	1159

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as life, fire and casualty. Most companies operate under Federal Government registration although some have provincial licences only. Also many fraternal orders and societies are engaged in this kind of business. The special articles relating to insurance that have appeared in previous editions of the Year Book are listed in Part II of Chapter XXVI under the heading "Insurance".

Section 1.—Life Insurance†

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to over $40,874,000,000 at the end of 1959, an increase of $4,378,000,000 during the year. The ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year, which had hovered around 10 p.c. each year during the decade ended in 1955, increased to 14.3 p.c. in 1956, fell back to 13.8 p.c. in 1957 and 10.3 p.c. in 1958 and moved upward to 12.0 p.c. in 1959.

Year	*In Force at Beginning of Year*	*Increase in Force for the Year*	*Percentage Gain*
	$	$	
1930	6,157,000,000	335,000,000	5.4
1935	6,221,000,000	38,000,000	0.6

1958	33,087,000,000	3,409,000,000	10.3
1959	36,496,000,000	4,378,000,000	12.0

---

* Material in this Chapter, except as otherwise indicated, has been prepared under the direction of the Superintendent of Insurance for Canada, Ottawa. More detailed data are available in the Annual Reports of the Department of Insurance.

† All the amounts given in the tables of this Section are net amounts after deduction of reinsurance ceded.

Subsection 1.—Summary of Life Insurance in Canada

Tables 1 and 2 summarize insurance premiums, claims, amounts of new policies effected, and amounts of insurance in force on Dec. 31 for the years 1958 and 1959. These data are presented in Table 1 on the basis of the supervising government authorities for the companies and societies concerned, and the same data are presented in Table 2 classified on the basis of nationality of company or society and by supervising government authorities.

Subsection 2.—Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since 1950—evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. At the end of 1959 there were 92 companies federally registered to transact life insurance in Canada, including 34 Canadian companies, 15 British and 43 foreign companies. Six of these companies (two Canadian, one British and three foreign) became registered during the year.

The operations analysed in the tables of this Subsection, with the exception of Table 7, include only those companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for over 93 p.c. of the life insurance in force in Canada.

3.—Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1950 and Annually 1951-59

Note.—Figures for 1869-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; and for 1940-49 in the 1957-58 edition, p. 1168. Statistics of fraternal society insurance, excluded here, are given at pp. 1148-1149.

Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 8 and 9 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

[1] Includes amounts written off shares purchased under mutualization plan. [2] Dividends on shares other than those purchased by the company under the mutualization plan.

Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table **10** gives statistics of life insurance effected through fraternal benefit societies by Canadian members and Table **11** shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables **10** and **11** relate to the 16 Canadian societies registered by the federal Department of Insurance, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. At the end of 1959 there were 32 foreign fraternal benefit societies federally registered to transact business in Canada although two of these do not grant life insurance benefits. One foreign fraternal benefit society became registered during the year.

[1] All funds, business in and out of Canada. [2] All funds, business in Canada only.

Subsection 5.—Life Insurance Effective and in Force Outside Canada by Canadian Companies under Federal Registration

In this Subsection, there are given for the years 1958 and 1959 summary statistics of insurance effected and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The statistics for individual companies are shown in Table **12** and for individual currencies in Table **13**. The data given in both of these tables are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies. Although these book rates of exchange do not follow the day-to-day fluctuations in the current rates of exchange, they are adjusted when necessary to keep them reasonably in line with the current rates.

Canadian life insurance companies operating under federal registration at Dec. 31, 1959, had life insurance in force amounting to $11,574,916,344 in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to $11,526,717,132; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to $27,695,965,612 at Dec. 31, 1959, and the total business on the books of these companies, in and out of Canada, amounted to $39,270,881,956. Thus, about 30 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada.

In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1959, Commonwealth and foreign investments in the amount of $2,678,488,923.

12.—Life Insurance Effected and in Force for Canadian Companies (excluding Fraternal Societies) under Federal Registration, in Currencies other than Canadian Dollars, by Company, 1958 and 1959.

Section 2.—Fire and Casualty Insurance

At the end of 1959 there were 286 companies registered by the Federal Government to transact fire insurance in Canada (84 Canadian, 85 British and 117 foreign). Of these companies, 277 (78 Canadian, 85 British and 114 foreign) were also registered to transact casualty insurance. In addition, 87 companies were registered by the Federal Government to transact casualty insurance but not fire insurance (19 Canadian, 6 British and 62 foreign). Of the companies registered to transact fire and/or casualty insurance, 60 were also registered to transact life insurance; 13 of these were registered for fire, life and casualty insurance and 47 for life and casualty but not fire insurance. It should be noted also that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 24 registered fraternal benefit societies transacting accident and sickness insurance, of which 21 also transacted life insurance.

As shown in Table 14, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces. Many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis.

Table 14 summarizes net premiums written and net claims incurred for the years 1958 and 1959 in the fields of fire insurance and casualty insurance in Canada. These data are presented on the basis of the supervising government authorities for the companies concerned. The table relates to insurance companies only; no data are included with respect to fraternal benefit societies.

Subsection 1.—Fire Insurance Transacted in Canada by Companies under Federal Registration

The net premiums written have increased very rapidly in recent years, having more than doubled since 1948. The net claims incurred have kept pace with this increase in net premiums written.

15.—Fire Insurance Transacted in Canada by Companies under Federal Registration, 1948-59

[1] Includes certain 'floater' business that cannot be apportioned to any one province.

Subsection 2.—Fire Losses

The information in Tables **17** to **20**, which deals with the loss of property and life caused by fire, has been summarized from the annual *Statistical Report of Fire Losses in Canada* prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures in 1959 amounted to $6,256,719 from 3,718 fires.

17.—Statistics of Fire Losses, 1950-59

Note.—Figures for 1926-46 are given in the 1947 Year Book, p. 1078, and those for 1947-49 in the 1960 edition, p. 1169. Figures from 1922 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

Year	Fires Reported	Property Loss[1]	Loss per Capita	Deaths by Fire	Year	Fires Reported	Property Loss[1]	Loss per Capita	Deaths by Fire

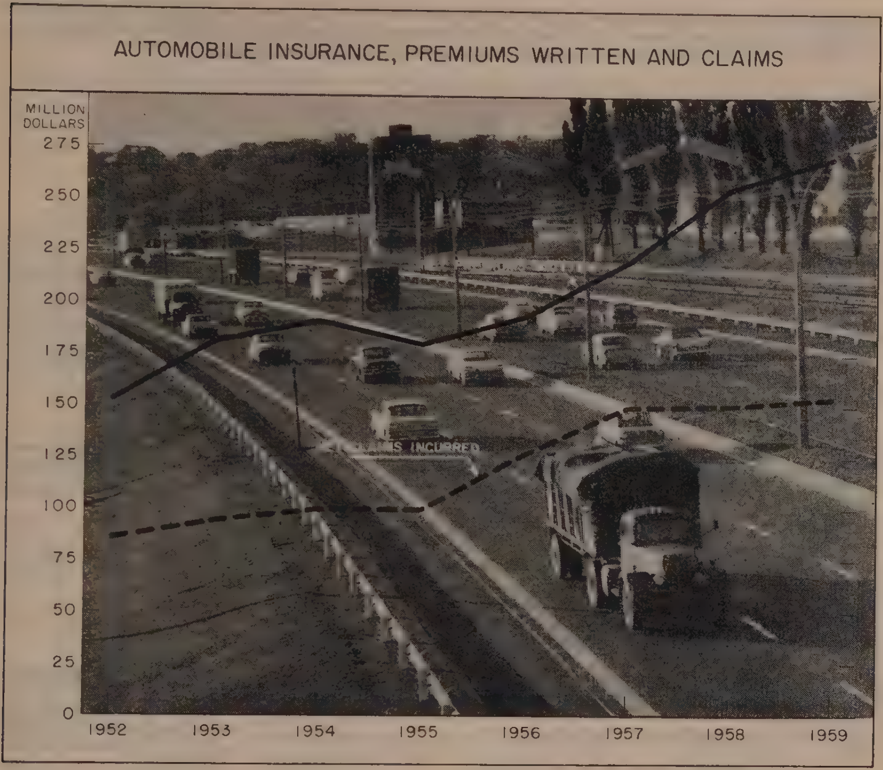
Subsection 4.—Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables **22** to **24** relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.



22.—Total Assets for Fire and Casualty Insurance of Canadian Companies under Federal Registration and Assets in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1957-59.

Section 3.—Government Insurance

Federal Government Insurance

For more than fifty years the Federal Government has operated an annuity service, instituted to assist Canadians to make provision for old age; this service is described below. In addition, various insurance schemes have been adopted in recent years by the Federal Government or co-operatively by the Federal and Provincial Governments. Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Government Annuities.*—The Government Annuities Act (RSC 1952, c. 132) was passed in 1958 and is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is $10 and the maximum $1,200 a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may be arranged to reduce by $55 a month at age 70 to fit in with payments under the Old Age Security Act.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions or entirely from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts may be taxable in either of two ways: (1) if registered under Sect. 79B of the Income Tax Act for tax exemption on premiums, the annuity is fully taxable, or (2) if not registered the annuity is taxable on the interest portion only. Annuities arising from approved pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1960, the total number of annuity contracts and certificates issued, excluding replacements, was 491,344. On the latter date, 81,228 annuities were being paid amounting to $43,403,649 annually and 347,481 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1960 was $1,221,836,933.

Up to Mar. 31, 1960, 1,223 corporations, institutions and associations, as compared with 1,195 up to Mar. 31, 1959, had entered into agreements with the Government to purchase annuities. Under these arrangements, 205,201 employees or members were holding certificates for purchase of deferred annuities as compared with 204,853 one year earlier. The number of group certificates issued in the year ended Mar. 31, 1960 was 11,564 as compared with 18,043 for 1958-59.

---

* Revised in the Government Annuities Branch, Department of Labour, Ottawa.

[1] Undetermined.

Provincial Government Insurance

Saskatchewan.—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1960 amounted to $8,702,013 and earned surplus to $432,602. The total amount made available to the Government of Saskatchewan since the beginning of government insurance operations in 1945 to Dec. 31, 1960, was $3,883,235. Assets at the latter date were $17,226,941 of which more than $10,000,000 were invested in bonds and debentures issued by Saskatchewan schools, municipalities and hospitals. Over 600 independent insurance agents sell government insurance throughout Saskatchewan.

The Automobile Accident Insurance Act, which became effective Apr. 1, 1946, is administered by the Saskatchewan Government Insurance Office. It establishes a compulsory automatic insurance plan designed to provide a reasonable minimum of compensation for losses arising from motor vehicle accidents regardless of fault. It also provides public liability insurance, with limits of $10,000/$20,000 for bodily injury and $5,000 for property damage, as well as comprehensive and collision coverage subject to a $200 deductible for private passenger cars. Rates vary from $4 a year for trucks to $40 for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1960, more than $45,000,000 were paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Librarian, The Saskatchewan Government Insurance Office, Regina, Sask.

Alberta.—Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. While both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

CHAPTER XXV.—DEFENCE OF CANADA

The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE ARMED SERVICES AND DEFENCE RESEARCH*

Section 1.—The Department of National Defence

The Minister and Associate Minister of National Defence exercise control over and management of the Canadian Armed Forces, the Defence Research Board and other matters relating to national defence. Under their direction the three Chiefs of Staff are responsible for the control and administration of their respective Services and the Chairman of the Defence Research Board is responsible for research and development in defence matters. The Chairman of the Chiefs of Staff Committee is responsible to the Minister for ensuring that all matters of joint defence and defence policy, in its widest sense, are carefully examined and co-ordinated before decisions are made.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. The Deputy Minister is assisted by an Associate Deputy Minister and four Assistant Deputy Ministers each of whom administers a division of the Deputy Minister's branch responsible for matters of: administration and personnel; construction, engineering and properties; finance; and supply. Also responsible to the Deputy Minister are: the Controller General of Inspection Services, the Judge Advocate General, the Chief Secretary, and the Director of Public Relations.

A number of committees meet at regular intervals to consider and advise on joint issues. These include:—

(1) **Defence Council.**—Composed of the Minister of National Defence (Chairman), the Associate Minister (Vice-Chairman), the Parliamentary Secretary, the Deputy Minister, the Chairman of the Chiefs of Staff Committee, the three Chiefs of Staff, the Chairman of the Defence Research Board and the Associate Deputy Minister; its purpose is to advise the Minister on administrative and other matters.

(2) **Chiefs of Staff Committee.**—Composed of the Chairman of the Chiefs of Staff, the three Chiefs of Staff and the Chairman of the Defence Research Board. The Deputy Minister of National Defence attends regularly and the Secretary to the Cabinet and the Under Secretary of State for External Affairs attend when required. The purpose of the Committee is to maintain a continuous review of all operational problems; sub-committees consider various aspects of these problems and report to the parent committee.

---

* Prepared in the Office of the Deputy Minister, Department of National Defence, Ottawa.

(3) **Personnel Members Committee.**—Composed of the Chief of Naval Personnel, the Adjutant-General, the Air Member for Personnel, the Assistant Deputy Minister (Administration and Personnel), the Assistant Deputy Minister (Finance) and a representative of the Chairman of the Defence Research Board. The purpose of the Committee is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies; sub-committees consider various aspects of personnel problems and report to the parent committee.

(4) **Principal Supply Officers Committee.**—Composed of the Chief of Naval Technical Services, the Quartermaster-General, the Air Member for Technical Services, the Assistant Deputy Minister (Requirements) and a representative of the Chairman of the Defence Research Board. The purpose of the Committee is to consider logistical problems; sub-committees consider various aspects of these problems and report to the parent committee.

Defence Supply Committee.—An interdepartmental committee composed of the Deputy Ministers of National Defence and of Defence Production and the senior military and civilian supply officers of the two Departments has been established to review interdepartmental procurement and production problems and consider various policy aspects of the procurement of ammunition, armament, aircraft, etc. Eleven panels consider various aspects of these problems and report to the parent committee.

Canada–United States Committee on Joint Defence.—Composed of: for Canada, the Secretary of State for External Affairs, the Minister of National Defence and the Minister of Finance; for the United States, the Secretary of State, the Secretary of Defense and the Secretary of the Treasury; together with such appropriate Cabinet Members as either Government may designate from time to time as the need arises.

The function of this Committee is to consult periodically on any matters affecting the joint defence of Canada and the United States; to exchange information and views at the Ministerial level on problems that may arise, with a view to strengthening further the close and intimate co-operation between the two Governments on joint defence matters; and to report to the representative Governments on such discussions in order that consideration may be given to measures deemed appropriate and necessary to improve defence co-operation. The Committee meets at least once a year or as may be considered necessary by the two Governments. Meetings normally alternate between Canada and the United States with the host country providing the chairman.

Liaison Abroad.—The Chairman of the Chiefs of Staff, who is the Canadian military representative in the North Atlantic Treaty Organization, is responsible for co-ordinating all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Joint Staff (London) representing the three Services and the Defence Research Board in the United Kingdom, the chairman of which is the principal military adviser to the Canadian High Commissioner in London, the principal military adviser to the Permanent Canadian Delegate to the NATO Council and the Canadian National Military Representative to SHAPE; (2) the Canadian Joint Staff (Washington) representing the three Services and the Defence Research Board in the United States, the chairman of which is the principal military adviser to the Canadian Ambassador in Washington, the Canadian National Liaison Representative to SACLANT Headquarters and the Canadian member of the NATO Military Committee in Permanent Session; and (3) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence.

Mutual Aid.—Canada's contributions to NATO are outlined on p. 141.

Rates of Pay and Allowances.—The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates for pay and allowances effective Oct. 1, 1960 are given in Table **1**.

1.—Monthly Rates of Pay and Allowances for the Canadian Armed Forces, Effective Oct. 1, 1960

Royal Canadian Navy	Canadian Army	Royal Canadian Air Force	Basic Pay	Progressive Pay			Group Pay for Tradesmen and Specialists						Subsistence Allowance		Ration Allowance	Marriage Allowance	Separated Family's Allowance (personnel not in married quarters and with children)	
				Years in Rank			Group						Personnel not in Receipt of Marriage Allowance	Personnel in Receipt of Marriage Allowance			In Receipt of Subsistence Allowance	Not in Receipt of Subsistence Allowance
				3	6	9	1	2	3	3A	4	4A						
			$										$	$	$	$	$	$
Ordinary Seaman (under 17 years)	Private recruit (under 17 years)	Aircraftman 2 (under 17 years)	56	—	—	—	—	—	—	—	—	—	65	—	30	—	—	—
Ordinary Seaman (entry)	Private (recruit)	Aircraftman 2	108	—	—	—	12	30	54	63	72	90	65	100	30	30	65	100
Ordinary Seaman (trained)	Private (trained)	Aircraftman 1	115	—	—	—	12	30	54	63	72	90	65	100	30	30	65	100
Able Seaman	Private (higher rate)	Leading Aircraftman	134	20	22	—	12	30	54	63	72	90	65	100	30	30	65	100
—	Lance-Corporal	—	181	—	—	—	12	30	54	63	72	90	65	100	30	30	65	100
Leading Seaman	Corporal	Corporal	187	3	3	3	12	30	54	63	72	90	65	100	30	30	65	100
Petty Officer 2	Sergeant	Sergeant	211	5	5	5	12	30	54	63	72	90	75	105	30	30	75	105
Petty Officer 1	Staff Sergeant	Flight Sergeant	235	5	5	5	12	30	54	63	72	90	85	105	30	30	85	105
Chief Petty Officer 2	Warrant Officer 2	Warrant Officer 2	272	5	5	5	12	30	54	63	72	90	85	105	30	30	85	105
Chief Petty Officer 1	Warrant Officer 1	Warrant Officer 1	304	5	5	5	12	30	54	63	72	90	95	110	30	30	95	110

1.—Monthly Rates of Pay and Allowances for the Canadian Armed Forces, Effective Oct. 1, 1960—concluded

Royal Canadian Navy	Canadian Army	Royal Canadian Air Force	Basic Pay	Pro-gressive Pay			Group Pay for Tradesmen and Specialists						Subsistence Allowance		Ration Allow-ance	Mar-riage Allow-ance	Separated Family's Allowance (personnel not in married quarters and with children)

---

[1] Depending on rank on promotion.

The allowances shown in Table 1 are explained briefly as follows.

Subsistence Allowance.—This allowance is granted whenever rations and quarters are not provided. A married man living with his family uses his subsistence allowance for their maintenance as well as his own.

Ration Allowance.—A ration allowance is granted when quarters are available but rations are not provided. It is not payable concurrently with subsistence allowance.

Marriage Allowance.—The amount of this allowance is $30 a month for men and $40 a month for officers, subject to a reduction of $10 a month where permanent married quarters are occupied or $2.50 a month where temporary married quarters are occupied. All ranks may draw this allowance upon marriage provided the initial training period has been completed and the age of 21 years has been attained by men and 23 years by officers.

Separated Family's Allowance.—An officer or man while separated from his dependants for any of various reasons (*i.e.*, movement of dependants prohibited, illness of dependants, lack of suitable accommodation), on being moved other than temporarily may be entitled to separated family's allowance at a rate and for a period depending on circumstances (*i.e.*, rank, reason for separation, whether or not he has children, whether or not his family is accommodated in married quarters, whether or not he is provided with quarters and rations). The rates listed are the maximum.

In addition to the above, *Foreign Allowances* of various kinds are granted to officers and men posted for duty outside Canada to compensate for additional living expenses or hardships incurred; these vary with rank, appointment and location. *Isolation Allowances* are granted to officers and men serving at specified isolated posts in Canada at rates depending upon location and circumstances. *Outfit Allowances and Clothing Credits* are as follows: Officers receive a single payment of $450 on appointment and Warrant Officers Class I, $270; men receive a free issue of clothing when they join and thereafter a monthly clothing credit or allowance of $7, Navy Petty Officer 1st class and above $9, and women $8. An *Aircrew Allowance* of $75 a month is paid to an officer or man undergoing flying training. For qualified aircrew this allowance may be increased to $150, depending on rank, if filling an appointment requiring active and continuous flying duties and to $100, depending on rank, for maintaining proficiency. *Submarine Allowance* is granted an officer or man undergoing submarine training or filling an appointment in a submarine; the allowance varies from $65 to $115 a month depending on rank. An officer or man actively engaged or undergoing training as a parachutist or on flying or submarine duty and not entitled to aircrew allowance or submarine allowance is paid a *Risk Allowance* at the rate of $30 a month. *Medical and Dental Officers* are granted extra allowances according to rank.

Subsection 1.—The Royal Canadian Navy

Role and Organization.—The role of the Royal Canadian Navy is to defend Canada and to contribute to the collective defence of the North Atlantic Treaty Organization (NATO) area against attack from the sea. In addition, the RCN may be required to assist in the support of the United Nations, as directed by the Canadian Government. To meet its role, the RCN maintains, in a state of readiness, an effective force of anti-submarine ships and aircraft with up-to-date equipment and logistic support.

The Royal Canadian Navy comes under the central authority of the Chief of Naval Staff at Naval Headquarters in Ottawa. The Flag Officer Atlantic Coast, at Halifax, N.S., and the Flag Officer Pacific Coast, at Esquimalt, B.C., exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands. The Flag Officers also hold the additional appointments of Maritime Commander Atlantic and Maritime Commander Pacific, respectively. As such, each is responsible for anti-submarine operations involving RCN and RCAF forces in his Command.

The 21 Naval Divisions of the RCN (Reserve) come under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. There are naval missions in London, England, and Washington, U.S.A., to maintain liaison with the Royal Navy and the United States Navy. As a result of Canada's NATO commitments (see p. 141), officers of the Royal Canadian Navy serve on the staffs of: the Supreme Allied Commander, Atlantic, at Norfolk, Va., in the United States; the Commander-in-Chief, Eastern Atlantic Area, at Northwood in the United Kingdom; and the Commander-in-Chief, Western Atlantic Area, at Norfolk, Va. The Flag Officer Atlantic Coast holds the NATO appointment of Commander, Canadian Atlantic Sub-Area.

The strength of the RCN at Mar. 31, 1961, was 20,655 officers, men and women in the regular force and 3,672 in the reserve force.

Operations at Sea, 1960-61.—In 1960 the Royal Canadian Navy celebrated its 50th anniversary. In the same year, the Navy reached its highest peacetime strength, with more than one-half its personnel serving afloat in 62 ships in commission on both coasts. The percentage of personnel serving afloat is among the highest of any navy in the world.

To assist in anti-submarine training, the Navy acquired in 1961 a submarine from the United States Navy to be based on the West Coast. The former USS *Burrfish*, the submarine was renamed HMCS *Grilse*. Seven ships are being built in Canadian yards. They consist of six Mackenzie class destroyer escorts and a tanker supply ship. The Mackenzie class is a further development of the well-known Restigouche class destroyer escort.

On the Atlantic in 1960, RCN ships participated with those of other NATO nations in large-scale exercises and also held national exercises of their own. In the Pacific, Canadian ships carried out an intensive training program which included exercises with the United States Navy. In the course of the operational and training cruises, ships of the Atlantic and Pacific Commands in 1960-61 ranged far afield, visiting ports in Australia, Peru, Chile, Panama Canal Zone, Galapagos Islands, Mexico, New Zealand, Okinawa, Japan, Hong Kong, Hawaii, Alaska, Greenland, the United Kingdom, Portugal, Nigeria, Ghana, Sierra Leone, Bermuda, the West Indies and the United States.

Reorganization of the Navy's personnel structure continued. On-the-job training was stepped up to maintain and increase the seagoing strength, and a new promotion system emphasized merit and equalized opportunities for all ranks.

Training.—The major shore training establishments are HMCS *Stadacona* at Halifax, N.S., HMCS *Naden* at Esquimalt, B.C., HMCS *Cornwallis* near Digby, N.S., HMCS *Shearwater* near Dartmouth, N.S., HMCS *Hochelaga* near Montreal, Que., and HMCS *Gloucester* near Ottawa.

Training facilities at *Stadacona*, *Naden* and *Shearwater* have been reorganized as Fleet Schools, with provision for general and specialized training. Under the Training Officer at *Stadacona* are five Divisions: Weapons, Engineering, Operational, Academic and Communications. At *Naden* the Divisions are: Operations and Weapons, Engineering, Academic, Medical and Music; and *Shearwater* has an Aircrew Division, Ground Crew Division, a Meteorological Division and a further division to be added later.

New equipment included a tactical trainer at the Joint Maritime Warfare School, Halifax, and a flight simulator for the RCN Air Station.

The New Entry Training Division is located at HMCS *Cornwallis* and the new-entry or re-entry training course is 15 weeks in duration. During 1960, 1,892 men and women, including apprentices, took basic training. HMCS *D'Iberville* at Quebec City gave all French-speaking new-entry personnel a basic course in English and preliminary training in seamanship and other professional naval subjects. After completing the course at *D'Iberville*, these new entries joined classes at *Cornwallis*. *D'Iberville* is to be paid off in 1961 and the school moved to HMCS *Hochelaga* at Montreal. Courses in the supply trades are conducted in *Hochelaga*, as are management and logistic courses for both officers and civilian personnel. Communications training is carried out at *Cornwallis* and *Gloucester*.

The main source of officers for the Royal Canadian Navy is the Regular Officer Training Plan which provides selected high school graduates with subsidized degree courses at the Canadian Services Colleges and Canadian universities. In 1960, 35 ROTP cadets who graduated from the Royal Military College of Canada or Canadian universities were promoted to Sub-lieutenant.

Under the *Venture* plan, introduced in 1954, young men are enrolled as cadets on a seven-year appointment, with the opportunity to apply for a permanent commission. In August 1960, there were 70 cadets under training, including five Belgians. Thirty-five cadets graduated and were promoted to the rank of Acting Sub-lieutenant. Of these, 17 went to flying training with the RCAF to obtain their wings before taking advanced flying training with the RCN; 18 went to sea as Sub-lieutenants.

A University Naval Training Division program is conducted to give instruction to university students with the object of providing well-trained junior officers for the RCN (Reserve) and RCN. The training period is three years and the cadets are required to complete three winter-training periods, two summer periods and certain specified courses. In July 1960, there were 530 UNTD cadets at 26 Canadian universities and colleges. Most of these received training during the summer in ships and establishments of the RCN.

Royal Canadian Navy (Reserve).—The recruiting and training of officers and men of the Royal Canadian Navy (Reserve) is conducted mainly through 21 Naval Divisions across Canada under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. Naval Divisions are established in the following centres:—

St. John's, Nfld., HMCS *Cabot*
Charlottetown, P.E.I., HMCS *Queen Charlotte*
Halifax, N.S., HMCS *Scotian*
Saint John, N.B., HMCS *Brunswicker*
Quebec, Que., HMCS *Montcalm*
Montreal, Que., HMCS *Donnacona*
Toronto, Ont., HMCS *York*
Ottawa, Ont., HMCS *Carleton*
Kingston, Ont., HMCS *Cataraqui*
Hamilton, Ont., HMCS *Star*
Windsor, Ont., HMCS *Hunter*
London, Ont., HMCS *Prevost*
Port Arthur, Ont., HMCS *Griffon*
Winnipeg, Man., HMCS *Chippawa*
Regina, Sask., HMCS *Queen*
Saskatoon, Sask., HMCS *Unicorn*
Calgary, Alta., HMCS *Tecumseh*
Edmonton, Alta., HMCS *Nonsuch*
Vancouver, B.C., HMCS *Discovery*
Victoria, B.C., HMCS *Malahat*
Prince Rupert, B.C., HMCS *Chatham*

Naval Divisions, commanded by Reserve officers, provide both basic and specialized training for officers and men of the RCN(Reserve). The Great Lakes Training Centre at Hamilton conducts new-entry reserve training afloat during the summer months.

Royal Canadian Sea Cadets.—Royal Canadian Sea Cadets, sponsored by the Navy League of Canada and supervised by the RCN, consisted of 159 authorized corps in 1960. These were divided into seven Sea Cadet areas, supervised by 16 naval officers, responsible to the Commanding Officer Naval Divisions. Instruction is carried out by RCSC officers. Two RCSC training establishments—*Acadia* on the East Coast and *Quadra* on the West Coast—accommodated officers and cadets for two-week training periods in 1960. In addition, Sea Cadets received eight-week training courses at the two establishments. Sea experience was provided for Cadets throughout the year in various types of ships of the RCN. The strength of the corps at the end of 1960 was 1,100 Sea Cadet officers and 9,700 Sea Cadets.

Subsection 2.—The Canadian Army

Organization.—Army Headquarters at Ottawa is organized into three separate Branches. The General Staff Branch deals with all matters affecting the fighting efficiency of the Army, the Adjutant-General Branch deals with all problems affecting the soldier as an individual and the Quartermaster-General Branch is responsible for supply. The senior appointment at Army Headquarters is the Chief of the General Staff who, through the Heads of the three Branches, directs all activities of the Canadian Army. For command and control, Canada is divided into Commands and Areas with Headquarters as follows:—

Command	*Headquarters*	*Area and Headquarters*
Eastern Command	Halifax, N.S.	(1) New Brunswick Area, Fredericton, N.B.
		(2) Newfoundland Area, St. John's, Nfld.
Quebec Command	Montreal, Que.	(3) Eastern Quebec Area, Quebec, Que.
Central Command	Oakville, Ont.	(4) Eastern Ontario Area, Kingston, Ont.
		(5) Central Ontario Area, Oakville, Ont.
		(6) Western Ontario Area, London, Ont.
Western Command	Edmonton, Alta.	(7) British Columbia Area, Vancouver, B.C.
		(8) Alberta Area, Edmonton, Alta.
		(9) Saskatchewan Area, Regina, Sask.
		(10) Manitoba Area, Winnipeg, Man.

The Canadian Army comprises the Canadian Army (Regular) and the Reserves. The Canadian Army (Regular) consists of a field force of four Infantry Brigade Groups, static, training, logistic support and headquarters units. One of the Infantry Brigade Groups is in Europe with the NATO Force and is under command of the Supreme Allied Commander in Europe. The Reserves include the Canadian Army (Militia), the Regular Reserve, the Supplementary Reserve, the Canadian Officers' Training Corps, the Cadet Services of Canada and the Reserve Militia. Additional to but not an integral part of the Canadian Army are the Services Colleges, officially authorized cadet corps, rifle associations and clubs.

The strength of the Canadian Army (Regular) at Mar. 31, 1961 was 48,051 officers and men and the strength of the Canadian Army (Militia) was 43,229.

Operations in 1960.—In fulfilment of military obligations under the North Atlantic Treaty, Canada has continued to provide ground forces for the defence of Western Europe. The 4th Canadian Infantry Brigade Group, the major units of which are the 8th Canadian Hussars (Princess Louise's), the 3rd Regiment Royal Canadian Horse Artillery, the 1st Battalion, The Canadian Guards, the 1st Battalion, The Queen's Own Rifles of Canada, and the 1st Battalion, The Black Watch (Royal Highland Regiment) of Canada, constituted the Canadian Army contribution to NATO at the end of the year. The Headquarters of the Brigade Group is at Soest, and married quarters are located in the vicinity of Soest, Werl, Hemer and Iserlohn.

The Canadian Army continued to provide a force of approximately 870 officers and men to the United Nations Emergency Force in the Middle East. Their task is the patrolling of a sector of the Egypt–Israel Armistice Demarcation Line, and the provision of communication, supply, transport and workshop services to the Force. Canadian Army contributions to United Nations commissions included 25 officers employed in Kashmir, Palestine and Korea.

As a result of Canadian participation in the International Commissions for Supervision and Control in Viet Nam and Cambodia, the Canadian Army continued to provide approximately 61 officers and men for truce supervisory duties in Indo-China. In addition, 30 officers and men were warned for duty in Laos when it appeared that reactivation of the Commission for Laos was imminent. Late in April 1961, the Commission was reactivated and the advance party left for New Delhi.

In August 1960 Canada sent a force to the Congo for service with the United Nations Congo Force. This force is a signals unit approximately 280 strong and includes a number of staff officers and other personnel for employment at HQ ONUC in Leopoldville. The majority of the signals unit is also in Leopoldville, but detachments provide UN communications at Headquarters of UN Territorial Commands in the Congo.

Canada, as a member of the United Nations, may be called on to provide at short notice military forces for service in support of the United Nations. An infantry battalion has been specially trained and equipped for operations of this nature in any part of the world.

The Army has assumed certain responsibilities for national survival, including attack warning, nuclear detonation and fallout reporting, re-entry operations into damaged areas and areas subjected to heavy fallout, and emergency communications.

Training.—The policy of training is determined at Army Headquarters. General Officers Commanding Commands implement the training policies within their Commands except for training conducted at Army and corps schools that are under the direct supervision of Army Headquarters. During 1960 the basic training of 4,495 recruits and the corps training of officers and men of the Canadian Army (Regular) were carried out at regimental depots, units and corps schools, and 7,019 personnel attended courses at the schools of instruction. Promotion qualification examinations consisting of written and practical tests were held to qualify Regular and Militia officers for the ranks of Captain and Major; 56 candidates passed qualification examinations for selection to attend the Canadian Army Staff College and 16 passed the entrance examination for the Royal Military College of Science. A training program was conducted during the winter months for all Regular officers to further their professional knowledge. Militia Staff Course examinations were conducted for Militia officers to qualify Captains and Majors for command and staff appointments. Qualifying courses for Junior NCO's were conducted under General Officers Commanding Commands. Senior NCO courses were conducted at corps schools in accordance with training standards.

French and English language training, which is available to all ranks of the Canadian Army, was conducted by Commands and AHQ. The R22eR Depot (Language Wing) conducted six-month French language courses for English-speaking officers and NCO instructors. A number of French-speaking potential NCO's also received English language training.

Officers from the RCN and RCAF as well as officers from the United States, the United Kingdom, Australia, Pakistan, India, Germany, Belgium, Turkey, Norway, France and Italy attended courses at Canadian Army schools of instruction.

Trade and specialty training is given at corps schools and units. Where feasible, the facilities of civilian schools are used to supplement training at Army establishments. Training is conducted in accordance with the appropriate training standard for each trade or specialty. When required by technical developments in the Army, trades are revised and new trades are introduced. Trades relating to aircraft maintenance have been introduced in keeping with the decision that the Army will use certain aircraft.

The apprentice training program inaugurated in September 1952 is designed to train selected young men as soldier tradesmen and to give them a background for advancement to senior non-commissioned ranks in the Army. A high entry standard has been set to ensure that the prospective soldier apprentice will be capable of absorbing trade and academic training and also of developing the leadership qualities essential in senior NCO's. During 1960 an additional 502 apprentices were enrolled and 46 civilian teachers were employed to provide academic instruction for about 967 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted. Apprentices receive training as technical assistants (Field) surveyors RCA, field engineers, radio and telegraph operators, radio equipment technicians, teletype and cipher equipment technicians, teletype operators, linemen, transport operators, administrative clerks, storemen, clerks accounting, storemen clerks, radio technicians, electrical mechanics, vehicle mechanics tracked, weapons technicians and instrument technicians. In addition, apprentices enrolled in the Royal Canadian Engineers may, on completion of the apprentice training, be trained as carpenters, masons, painters, electricians, draughtsmen (architectural and engineering), training aids artists and driver radio operators. A balanced training program is designed to stimulate the interest of the apprentice. Military, trade, academic and recreational training is integrated. Separate messing, canteen and sleeping arrangements are provided for apprentices.

The training of the Defence of Canada Force continued throughout 1960. Airborne continuation training was carried out by each unit in conjunction with unit exercises. Defence of Canada Force units carried out exercises during the winter under cold weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Training Centre at Rivers, Man., and courses in Arctic training at Fort Churchill, Man. Collective training for units in Canada was carried out during the summer months at Camp Gagetown, Camp Petawawa and Camp Wainwright. All arms training comprised subunit and unit training and culminated in exercises at the Brigade Group level.

The Reserves.—Funds were provided to permit an average of 40 days of training for all ranks, plus up to 70 days of training for key personnel in the Militia. This included seven days of summer training for selected personnel by attachment to Regular Army units, attendance at command National Survival camps and in-job training at headquarters. During the summer, 17,215 all ranks including members of the Canadian Women's Army Corps and Young Soldiers participated in this training.

The Regular Officer Training Plan (ROTP).—The Regular Officer Training Plan is in effect at the three Canadian Services Colleges and at all Canadian universities and affiliated colleges that have contingents of the COTC. The purpose of the Plan is to train selected students for commissions in the Canadian Army (Regular). Students enrol in the Canadian Army (Regular) with a special rate of pay; tuition and essential fees are paid and grants are given for books and instruments needed for study. During the year ended Mar. 31, 1961, 110 of these sponsored students graduated and were commissioned in the Canadian Army (Regular). Training consists of military studies, drill and physical training during the academic year; the summer term is devoted to practical training at military establishments.

The Canadian Officers' Training Corps (COTC).—In addition to the Regular Officer Training Plan, units of the Canadian Officers' Training Corps are maintained at Canadian universities to produce primarily, from among university undergraduates, officers for the reserve components of the Army. University graduates who have been members of the Canadian Officers' Training Corps are also eligible for commissions in the Canadian Army (Regular). Members of the COTC undertake the same training as members of the ROTP. During the year ended Mar. 31, 1961, seven who had trained with the COTC were awarded commissions in the Canadian Army (Regular).

Army Cadets.—As at Mar. 31, 1961, the program for Royal Canadian Army Cadets involved 2,126 Cadet Services of Canada officers and civilian instructors and 65,200 cadets in 484 corps. In 1960, a total of 5,008 selected cadets attended trades and specialist seven-week summer camps at Aldershot, N.S., Farnham, Que., Ipperwash and Camp Borden, Ont., and Vernon, B.C.; 777 cadets attended two-week Junior Leader camps at

Aldershot, N.S., and Clear Lake, Man. The National Cadet Camp at Banff, Alta., was conducted for 230 Master and First Class cadets. A total of 742 Cadet Services of Canada officers and civilian instructors was employed at or attended cadet camps under instruction.

Subsection 3.—The Royal Canadian Air Force

Organization.—The RCAF is controlled from Air Force Headquarters at Ottawa, which is responsible for planning, policy and administration of the Regular and Reserve components of the RCAF. The Headquarters organization comprises four major Divisions —plans and operations, technical services, personnel, and resources control. On Mar. 31, 1961, the major RCAF formations and their Headquarters locations were as follows:—

Formations	*Headquarters*
Air Defence Command	St. Hubert, Que.
5 Air Division	Vancouver, B.C.
1 Air Division	Metz, France
Air Transport Command	Trenton, Ont.
Air Materiel Command	Rockcliffe, Ont.
Maritime Air Command	Halifax, N.S.
Training Command	Winnipeg, Man.

The organization included 29 flying squadrons of the RCAF Regular and 11 flying squadrons of the RCAF Auxiliary. The Auxiliary squadrons performed an emergency and rescue role. Nine of the Regular squadrons contributed to the air defence of the Canada–United States regions; 12 squadrons were assigned to the air defence of Western Europe; four squadrons were required for RCAF transport operations at home and abroad; three maritime squadrons operated in conjunction with other forces for the defence of Canada's East and West Coasts; and one reconnaissance squadron carried out aerial photography and reconnaissance in the Canadian North.

The strength of the RCAF at Mar. 31, 1961 was 51,349 officers and men in the Regular Force and 3,130 in the Auxiliary Air Force.

Operations in 1960.—The RCAF continued to fill its air defence commitments, improve the effectiveness of its air defence squadrons and emphasize defence integration with the United States Air Force under the North American Air Defence Command (NORAD). The Canadian air defence force remained at nine squadrons of *CF-100, Mk-V* aircraft. No. 1 Air Division in Europe, comprised of eight *F-86*, four *CF-100, Mk-IVB* and one *AC and W* squadrons, continued to fill Canada's commitment to the NATO air defence fighter force.

Air Defence Command continued its planned build-up and had under operation three radar systems—the Distant Early Warning Line (DEW), the Mid-Canada Line (MCL), and the Pinetree Line—as an integral part of NORAD. The southern portion of the Ground Observer Corps was disbanded effective June 1, 1960; the northern portion continued operations as a supplement to the early warning radar system.

The RCAF Maritime Air Command during 1960 contributed three land-based maritime squadrons to the Maritime Defence of North America. Two of these squadrons, based on the East Coast, have been completely equipped with *Argus* aircraft, the largest and most modern anti-submarine aircraft in the world. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was also conducted throughout the period. These two squadrons and a third *Neptune* aircraft squadron on the West Coast participated in a number of national, international and NATO anti-submarine exercises conducted throughout the year. Daily patrols and surveillance of ocean areas adjacent to the Canadian coastline were also maintained.

Air Transport Command continued to provide support to the Air Division and the Army Brigade in Europe using *North Star* aircraft. *North Stars* were also used to support the United Nations Emergency Force in Egypt and the Congo as well as to assist in the transportation of medical aid, food and equipment in support of the disasters at Agadir and in Chile. A flying unit, operating *Dakota* and *Otter* aircraft, was maintained for local employment in Egypt in support of UNEF. *Fairchild C-119* aircraft of Transport Command were engaged in cargo and personnel carrier operations in Canada and in paratroop training for the Canadian Army. *North Star*, *C-119* and *C-130* aircraft were used in support of Arctic Weather Stations. Routine reconnaissance flights in the Arctic Archipelago and photographic missions for the Department of National Defence were carried out by 408 Squadron.

During the year, the RCAF continued to provide search and rescue services in Canadian areas of responsibility; 48 major search operations were conducted, of which 24 were for civil aircraft, eight were for military aircraft and 16 for marine and other craft. During the year, 196 mercy flights were performed. The total flying time for all search and rescue operations was 6,900 hours.

Training.—During the year ended Mar. 31, 1960, the RCAF provided training for approximately 4,000 officers and airmen to replace releases and for some 1,500 who were to assume new appointments resulting from technological changes. Basic training qualified personnel to do the relatively simple but vital jobs in the RCAF; conversion and advanced training qualified personnel to do more complex jobs and to assume greater responsibilities.

During the year, training was given in the operation and maintenance of the SAGE and Bomarc system which will become operational in the RCAF in the near future. To keep abreast of rapid technological developments, a number of officers and airmen attended short familiarization courses on computers and other electronic equipment at Clinton, Ont.; courses on guided missiles and space technology at Clinton and Camp Borden; and courses with industrial firms in Canada and in the United States. Pilot and radio navigator trainees received primary aircrew training at Centralia, Ont. Pilot trainees were given primary flying training at Centralia, basic at Moose Jaw, Sask., or Penhold, Alta., and advanced at Portage La Prairie or Gimli, Man. Radio navigators received training at Winnipeg, Man. Approximately 1,000 entrants whose native language was French were given from 10 to 22 weeks of instruction in the English language in schools located at St. Jean, Que., and Centralia, Ont.

Forty-five Danish and 35 Norwegian nationals were trained as pilots and five Turkish Air Force officers were trained as advanced jet instructors. About 20 Canadian Army officers received a special 60-hour flying training course at Centralia and 30 RCN personnel following regular primary and basic phases received advanced twin-engine training at Saskatoon, Sask.

Formal trade courses for tradesmen and technicians and newly commissioned non-flying list officers in aeronautical engineering, armament, supply, telecommunications and flying control were conducted at RCAF technical schools in Ontario located at Camp Borden, Aylmer and Clinton. Aircraft system trainers were used extensively to support technician and aircrew training programs at field technical training units and operational training units. Advanced personnel, both Regular and Auxiliary, were given assistance in a wide range of subjects to help them improve in job proficiency and qualify for higher trade groupings. Semi-annual trade examinations were written under the direction of Training Standards Establishment located at Trenton, Ont.

RCAF Reserve.—The active sub-components of the RCAF reserves are designated as the Auxiliary and the Primary Reserve.

Eleven Auxiliary flying squadrons, equipped with transport aircraft, are maintained to carry out emergency transport and reconnaissance operations. The RCAF also maintains 13 Auxiliary medical units and eight technical training units. These units will in future become associated with the flying squadrons in an emergency role. Disbandment of the 14 aircraft control and warning squadrons commenced in February 1961 and will be completed in January 1962.

The Primary Reserve is concerned mainly with the training of members of the University Reserve Training Plan (URTP). Other Primary Reserve components are Air Cadet Officers (ACO) and the Manning Support Officers (MSO). The Reserve Tradesmen Training Plan, which was formerly a part of the Primary Reserve, was discontinued during 1960 and all future training for Auxiliary squadrons and units will be carried out by the technical training units.

During the year ended Mar. 31, 1961, an officer's training course was conducted at the Reserve Officer School (ROS), St. Jean, Que., for some 300 first-year URTP university undergraduates. Following this initial training, non-flying list cadets commenced basic training courses in aeronautical engineering, telecommunications, armament, supply and accounts while others in the medical, air services and personnel lists were employed at Regular Force units on contact training. Second-year and third-year flight cadets continued with their formal or contact training commenced in previous years.

Royal Canadian Air Cadets.—Air Cadet activities in Canada are sponsored and administered by the Air Cadet League of Canada. The League is a voluntary civilian organization formed in 1940 to provide preliminary aviation training for potential members of the Royal Canadian Air Force. The peacetime objective of air cadet training is to give basic training in aviation and other closely associated subjects as well as citizenship training which will better fit Canadian youth for careers in civilian or Service life. The RCAF works in partnership with the League and provides training personnel, syllabi and equipment.

The authorized ceiling of cadet enrolment is 25,500 and the strength at Jan. 31, 1961 was approximately 24,500, attached to 332 squadrons across Canada. Air Cadet training is carried out in more than 270 communities from Newfoundland to British Columbia. During the summer of 1960, camps were held at RCAF Stations at Summerside, P.E.I., St. Jean, Que., Trenton, Ont., and Sea Island, B.C., attended by about 6,000 cadets together with officers and instructors. A seven-week course for senior leaders and drill instructors was held for 200 cadets at RCAF Station, Camp Borden, Ont.

Under the International Exchange Visits Program for 1960, sponsored jointly by the RCAF and the Air Cadet League, 58 cadets were exchanged with the United Kingdom, the United States, Denmark, the Netherlands, Norway and Sweden.

About 250 senior air cadets receive flying training annually at flying clubs through scholarships provided by the RCAF and additional scholarships are awarded by the Air Cadet League and other organizations which in 1960 numbered 109.

Subsection 4.—The Defence Research Board

The Defence Research Board was established on Apr. 1, 1947 by an amendment to the National Defence Act. The Board consists of a full-time chairman and vice-chairman, five ex officio members and nine other appointed members. The ex officio members are the Chiefs of Staff of the three Armed Services, the Deputy Minister of National Defence and the President of the National Research Council. The other members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of headquarters staff, an operational research group and nine field research stations, and liaison offices at London, England, and Washington, U.S.A. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Board by their consideration of a variety of problems.

The Government, realizing the vital need for continuity in research, planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council. Thus the Defence Research Board has been described as a fourth Service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. The Board's policy is to select and concentrate its efforts upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as the National Research Council are used wherever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. From the policy of specialization it follows that close collaboration must be maintained with Canada's larger partners. Specialization is made possible only through the willingness of the United Kingdom and the United States to exchange the results of their broader programs for the less numerous but nevertheless valuable benefits of Canadian research.

The activities of the Defence Research Board are concerned primarily with maritime warfare, armament, telecommunications, Arctic, special weapons, operational, medical, aeronautical and materials research problems of specific interest to Canadian defence. To conduct this program of research, the Defence Research Board operates nine specialized research and development establishments and, in addition, organizes and supports research on problems of defence interest in universities and other agencies.

Research on maritime warfare problems is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. The principal emphasis at each station is on problems related to submarine detection and tracking.

Research and development of weapons and armament is undertaken by the Defence Research Board in co-operation with the Armed Services at various establishments. The largest of these is the Canadian Armament Research and Development Establishment near Valcartier, Que. Its principal activities include research and development and testing of new and improved weapons.

Research on telecommunications is carried out at the Defence Research Telecommunications Establishment. This Establishment is concerned mainly with problems of communication and air navigation and supports these with considerable effort in basic research in the fields of radio propagation and electronics components.

Research dealing with problems in Arctic operations is conducted at the Defence Research Northern Laboratory, Fort Churchill, Man. This Laboratory has given valuable support in the instrumentation of rockets fired from the rocket range located at this station.

Special weapons is the generic term used to cover research on the defensive aspects of chemical, biological and atomic weapons. This work is carried out at three Defence Research Board establishments—the Defence Research Chemical Laboratories at Ottawa, Ont., the Suffield Experimental Station at Ralston, Alta., and the Defence Research Kingston Laboratory at Barriefield, Ont.

Medical, psychological, clothing and food research is carried out intramurally at the Defence Research Medical Laboratories near Toronto and extramurally in Canadian universities by means of a grant-in-aid program. An important field of activity is aviation medicine but investigations include naval and army problems as well as studies on blood substitutes, infection and immunity, burns and wounds, the effects of noise on hearing, and other factors likely to affect a military man's efficiency and health.

Most of the basic aeronautical research program is also carried out extramurally in Canadian universities and in Canadian industry. The principal fields covered are aerodynamics, aircraft propulsion, and engineering materials.

Operational research is carried on in the Defence Research Board by a Headquarters group. This group conducts long-range scientific analyses of future defence problems; it is also responsible for computational work on behalf of other operational research sections in cases where the use of digital computational equipment is required. In addition to this group, trained operational research scientists are provided by the Defence Research Board to the operational research teams in the three Armed Services, and also to a fourth outside group known as the Defence Systems Analysis Group which undertakes, for the Chiefs of Staff Committee, analytical studies of those defence problems that lie beyond the executive responsibility of an individual Chief of Staff.

In all, the Board continues to support those fields of research that are of foremost interest to the Canadian Armed Services and the program is under continual review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

Section 2.—Services Colleges and Staff Training Colleges

Canadian Services Colleges.—The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers, and Collège Militaire Royal de Saint-Jean established at St. Jean, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948, and Collège Militaire Royal de Saint-Jean was opened in 1952. In 1959 the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provide a sound and balanced liberal scientific and military education leading to degrees in Arts, Science and Engineering which are granted by the Royal Military College. The organization and training give cadets the opportunity to command and to exercise judgment.

For cadets entering the Royal Military College and Royal Roads the course is of four years duration. As the third and fourth years of the course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final two years of the Arts, Science or Engineering courses. For cadets entering Collège Militaire Royal, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and the final two years at the Royal Military College.

The college year is eleven months, divided into three terms—autumn, winter and summer. The months September to May are devoted to academic training supplemented by such military studies as drill and physical training. The summer term, June to mid-August, is spent in practical training at an establishment of the Service in which the cadet is enrolled. Academic requirements for admission to the first year at the Royal Military College and Royal Roads is senior matriculation (or its equivalent) in the following subjects: English, physics, mathematics (algebra, geometry and trigonometry), chemistry and either history or a language, preferably French. French-speaking candidates having a B.A. degree from a classical college may be accepted directly into the first year at Collège Militaire Royal. For admission to the preparatory year at that institution the academic requirement is junior matriculation (or its equivalent) in English, French, algebra, geometry, physics and chemistry, although consideration is given candidates who do not possess the standing in French. Candidates from the classical colleges require at least sixth-year standing.

To be accepted, a candidate must be single, a Canadian citizen or British subject normally resident in Canada and physically fit in accordance with the medical standards of the Service in which he enrols. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry. Personal interviews and medical examinations of candidates are carried out by Service Boards located at various centres across Canada. Senior officers representing the Services and a faculty member from the Services Colleges sit on interview boards. The interview boards base their recommendations on the physical and personal qualifications of the candidates; responsibility for final selection rests with a board appointed by the Minister of National Defence.

Since September 1954, virtually all cadets entering the Services Colleges have been required to enrol under the Regular Officer Training Plan. Under this Plan applicants accepted for entry enrol according to their choice, as naval cadets in the Royal Canadian Navy, as officer cadets in the Canadian Army or as flight cadets in the Royal Canadian Air Force. Costs of tuition, board, lodging, uniforms, books, instruments and other essential fees are borne by the Department of National Defence, and cadets are paid at the rate of $63 a month. On successfully completing their academic and military training, cadets are granted permanent commissions in the regular force but may, if they so wish, apply for release after three years of service following completion of academic training.

The only cadets now accepted at the Services Colleges in a reserve capacity are those who qualify for Dominion Cadetships, which are awarded by the Federal Government in recognition of a candidate's parent having been killed, died or been severely incapacitated in the service of one of Canada's Armed Forces. A maximum of 15 Cadetships may be awarded in any one year, five in each Service. Each is valued at $580, which covers first-year fees.

During the 1960-61 academic year, 995 cadets were in attendance at the Services Colleges—432 of them at Royal Military College, 175 at Royal Roads and 388 at Collège Militaire Royal de Saint-Jean. Of the total, 206 were enrolled in the Navy, 370 in the Army and 419 in the Air Force.

Staff Training Colleges.—The Canadian Army Staff College at Kingston, Ont., trains officers for staff appointments in peace and war. The course is 21 months in duration with a student intake every second year. Although most of the student body is composed of Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. The system of instruction is based upon the study of précis and other references, demonstrations and lectures, and indoor and outdoor exercises. Most of the work is carried on in syndicates, each under a member of the directing staff. Attention is paid to both individual and team work. Aside from purely military subjects such as the study of tactics, the curriculum includes national survival, research and development, world affairs and lectures by prominent guest speakers.

The Royal Canadian Air Force College at Armour Heights in Toronto, Ont., is a permanent establishment consisting of a Staff School for junior officers and a Staff College for senior officers. The Staff School course is for RCAF officers only; the Staff College course is for officers of other Services as well as Air Force officers. The course affords professional education for officers normally of Squadron Leader and Wing Commander ranks, preparing them to assume higher appointments. The directing staff selected from the Royal Canadian Air Force is augmented by an exchange officer from each of the Royal Canadian Navy, the Canadian Army and the Royal Air Force. The student body, in addition to Royal Canadian Air Force officers, has eight representatives from the Royal Canadian Navy and one or two from each of the Canadian Army, Royal Air Force and United States Air Force. The course is designed to assist the student to think logically and express his ideas with precision both orally and in writing; to know his Service and understand the employment of air forces; to keep abreast of scientific and technical developments that may affect the employment of air forces; and to gain a perspective of national and international problems. Lecturers are drawn, when desirable, from industry, the Armed Forces, the diplomatic corps and universities. Instructional visits are made to commercial and military establishments in Canada and abroad.

The National Defence College at Kingston, Ont., which opened on Jan. 5, 1948, is a senior defence college providing an 11-month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and government departments attend, as well as a few representatives from industry. An extensive lecture course is provided, with lecturers chosen from leaders in various fields in Canada, the United States, the United Kingdom and other countries. In addition, educational tours and visits to certain parts of Canada, the United States, Europe and the Middle East give students more knowledge of conditions and influences in their own and other countries. The 14th course from September 1960 to July 1961 was attended by students from the following organizations: four each from the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force; two each from the Defence Research Board and the Department of External Affairs; and one each from the Department of Finance, the Civil Service Commission, the Royal Canadian Mounted Police, the Department of Labour, the Department of Defence Production and the Department of National Defence. Representation from outside Canada included one member each from the Royal Navy, the British Army, the Royal Air Force and the Commonwealth Relations Office of the United Kingdom, the United States Navy, the United States Army, the United States Air Force and the State Department of the United States.

PART II.—DEFENCE PRODUCTION*

Under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity and materials are available to support the defence production program. The Department also serves as procurement agent for the Canadian Commercial Corporation, a Crown company primarily responsible for the purchase in Canada of defence goods required by other governments and of supplies needed to meet Canadian commitments under the Colombo Plan and other international agreements. The Department is responsible for planning and making other necessary arrangements to provide for the immediate establishment of a War Supplies Agency should there be a nuclear attack. Military construction is the prime responsibility of Defence Construction (1951) Limited, a Crown company reporting to Parliament through the Minister of Defence Production.

During 1960, the Department of Defence Production and Defence Construction (1951) Limited placed defence contracts on behalf of the Department of National Defence having a total net value of $805,871,000. This was an increase of 36.0 p.c. over the total for the preceding year. (The net value of contracts placed takes account of the value of amendments that increased or decreased existing contracts as well as the value of new contracts issued.) The major increases in the net value of contracts issued were in the aircraft, ships, and electronics and communication equipment programs. Contracts and amendments issued for the aircraft program had a total value of $343,919,000 in 1960, more than two-thirds greater than in 1959. This program accounted for 42.7 p.c. of the total net value of contracts placed in 1960, compared with 34.3 p.c. in the previous year. Contracts having a total net value of $133,617,000 were placed for the electronics and communication equipment program in 1960, an increase of 62.3 p.c. over 1959. The increases in the aircraft and the electronics and ammunition equipment programs were largely attributable to commitments related to the *CF-104* aircraft. The ships program involved contracts valued at $86,243,000, the largest portion of which was for destroyer escorts. Defence construction contracts totalled $51,571,000 in 1960, 23.2 p.c. lower than in 1959.

---

* Prepared by the Economics and Statistics Branch, Department of Defence Production, Ottawa.

The value of expenditures on defence procurement and construction amounted to $620,592,000 in 1960, 7.8 p.c. less than in 1959. All the major programs except aircraft showed declines. Aircraft spending increased by $6,044,000. Expenditures for ammunition and explosives dropped by $16,331,000 and expenditures for electronics and communication equipment declined by $12,092,000. Expenditure on clothing and equipage was $16,516,000 lower in 1960 mainly because of the unusually large output in 1959 when the Department of National Defence took over the Defence Production stockpile of cloth.

Of the total net value of contracts issued during 1960, 10.6 p.c. was placed outside Canada compared with 8.0 p.c. in 1959. The increase in contracts placed abroad in 1960 was accounted for mainly by purchases of the *CF-104D* trainer aircraft, the *LN-3* navigation system, and a small number of *C-130B* aircraft with associated spares and equipment. Payments to defence contractors outside Canada in 1960 came to 11.3 p.c. of total spending, a somewhat higher proportion than the 6.7 p.c. paid directly to foreign firms in 1959.

Aircraft.—*CF-104* production became the major program within the Canadian aircraft industry in 1960. Output of the airframes, engines and equipment proceeded on schedule. The similarity between the Canadian version of the *F-104* aircraft and that adopted by several NATO countries has lent itself to close co-operation between the countries concerned.

Deliveries of the *CP-107 Argus* maritime reconaissance aircraft and the *CS2F Tracker* carrier-borne aircraft were completed in 1960, and deliveries of the *CC-109* medium-range transport were almost completed. The *CC-106* long-range transport production programs continued and the first aircraft was delivered before the end of the year. Production of *Otter* aircraft for the RCAF also continued throughout 1960. Four *Caribou* aircraft were purchased for use and support of United Nations activities. Contracts were placed on behalf of the United States Army for a number of *Caribou*, and a development program on the *Mk-2* version of this aircraft was started in co-operation with the manufacturer. The first of a small quantity of *Albatross* search and rescue aircraft ordered from the United States was delivered. Four *C-130B Hercules* medium-range, heavy-bulk-carrier aircraft and equipment were also purchased in the United States.

Production of *R-1820-82* piston engines and *Hamilton Standard* propellers, both for the *CS2F Tracker*, was completed. Production of the *J-79-7* turbojet engine for the *CF-104* was on schedule and the first engine successfully completed its test run. The Department gave financial support to the *PT-6* gas turbine engine which was being developed by a Canadian company.

In the field of aircraft equipment items, production of the position and homing indicator was entered into for the *CF-104* program and was selected by the Air Forces of the Federal Republic of Germany, the Netherlands, Belgium and Italy for use in their *F-104* aircraft. The *LN-3* inertial navigation system, the *MH-97* automatic flight control system and other items of navigation equipment for the *CF-104* were also put into production. Further quantities of the air navigation and tactical control system (ANTAC) were ordered for the *Neptune* anti-submarine aircraft.

Electronics.—The production of search and height-finding radars and of fiberglass radomes for the Air Forces of both Canada and the United States neared completion in 1960. Production continued on counter countermeasure equipment and on selective identification equipment. The development and production of data-processing equipment was a significant contribution to the air defence radar program. Production began on battlefield surveillance radars.

Two major search and attack sonar programs continued in production during the year. Work on the Canadian-designed variable depth sonar also continued, with additional production being required to meet the needs of the Royal Navy. A variety of naval navigation equipment, such as gyro compasses, logging equipment and plotting tables, was produced. Sonobuoy development and production continued for the Royal Canadian Air Force and the United States Navy.

Production and installation continued on air defence communication (ADCOM) for the Royal Canadian Air Force. Planning continued for semi-automatic ground environment (SAGE) communications in Canada, and initial contracts were placed for the lease of long-line and on-base systems. Rearward communications for the Ballistic Missile Early Warning System (BMEWS) were completed during the year. Production for Canadian Army vehicle communications continued in the United Kingdom. Procurement began for the radio transmitting and receiving equipment for new naval ships.

The production of the NASARR system of fire control and terrain avoidance for the *CF-104* aircraft was a major project in the field of aircraft electronics in 1960. Communication, navigation and identification equipment for several major new and retrofit programs continued in production. Considerable development work took place on airborne anti-submarine electronics, including a sonobuoy receiver retrofit program.

Development of an *Argus* tactical crew procedure trainer (flight simulator) neared completion and programs were completed in connection with the *Argus* operational flight trainer and general purpose flight and instrument trainers. A major program for the supply of *CF-104* operational flight and tactics trainers was undertaken, including requirements for the Federal Republic of Germany, the Netherlands and Belgium. A requirement for a tactical trainer for the Royal Canadian Navy was met and work began on a models control trainer for that Service.

Considerable activity was devoted to the operation and maintenance of the Mid-Canada early warning line. Installation of new radar, data-processing, communication, navigation and identification equipment, largely for the United States military services, required substantial effort during the year.

Shipbuilding.—Construction of the six vessels of the third group of destroyer escorts, known as the repeat-Restigouche class, continued during the year. The last two vessels of this class will be improved to include, among other things, a helicopter flight deck and variable depth sonar equipment. The central procurement agency located at the lead yard maintained its operations under the Department's supervision. This procurement agency is responsible for the bulk purchase, distribution and accounting connected with the supply of equipment to be worked into the vessels of the repeat-Restigouche class.

A contract was placed on a normal commercial basis for the construction of a naval tanker-supply vessel. This is the first time that a contract of this nature has been negotiated for a large Canadian naval vessel. Contracts for a standard diving tender and a tank cleaning barge for the Royal Canadian Navy were accelerated as part of the Federal Government's winter works program. A contract was issued, as a result of competitive tenders, for the construction of a hydrographic and oceanographic survey vessel for the Department of Mines and Technical Surveys. Programs of small boats were completed in 1960.

Armament.—Production of anti-submarine mortars, 2.75″ rockets and 3″/50 calibre illuminating cartridges was completed during 1960. Among the major items under production were anti-submarine torpedoes for the Royal Navy; 7.62mm rifles and 9mm submachine guns and ammunition; 20 pdr., 105mm howitzer, and 81mm mortar smoke ammunition for the Army; 3″/50 calibre, 3″/70 calibre and 4″ naval gun ammunition; practice depth charges and bombs; high altitude rockets; and many types of pyrotechnic devices for the Armed Services.

Procurement of armament items from abroad increased as a result of smaller requirements for the Armed Services. Items were imported, however, only where production in Canada would have meant the establishment of special facilities at an unduly high cost. The principal purchases in the United States were for 762mm Honest John rocket equipment and jet assisted take off (JATO) rockets. Purchases in the United Kingdom included 3″/70 calibre guns and mountings, 105mm tank ammunition, star shells and flares, safety aircraft ejection equipment, and special armour plate.

Major development projects included navigational and arming aids, underwater explosive signals, new type anti-submarine projectiles, plastic components, a new type of propellent, and pyrotechnic devices.

Construction.—Construction activity for the Canadian Armed Services decreased slightly to $64,193,000 in 1960, as measured by payments to contractors. The value of contracts placed in 1960 also declined to $51,571,000. The largest contracts placed by Defence Construction (1951) Limited on behalf of the Canadian Forces were for complete construction of two heavy radar sites and a Bomarc missile-launching base. Other large contracts included a technical training building at Camp Borden, Ont., a new wing for the Defence Research Board radio physics laboratory at Shirley Bay, Ont., and a composite accommodation building at Shelburne, N.S. There was a large amount of construction in Canada in 1960 for the United States Air Force. The value of payments to contractors by the United States totalled $17,310,000. Work continued on such projects as refuelling facilities for the Strategic Air Command, the radar improvement programs, and the Ballistic Missile Early Warning System.

General Purchasing.—The procurement of supplies and services not normally requiring special production facilities increased slightly in 1960 to $179,300,000. Materials purchased by the headquarters organization included bulk requirements of such items as petroleum products, coal and coke, clothing and footwear, medical and dental stores, power generating and control and distribution equipment, beverages and packaged foods, building supplies and hardware, furniture and furnishings, barrack equipment and naval stores, as well as aircraft ground-handling equipment and all types of mechanical transport, construction and road maintenance equipment. Services arranged by headquarters included certain research and development projects, engineering, food catering and aerial surveys. Research projects included the investigation of indigenous tanning materials for the production of leather, ways of combating ice on fixed structures and airport runways, and the bearing strengths of ice sheets. Industry and certain Crown agencies participated in the development of essential equipment in the nuclear, bacteriological and chemical fields.

During the year contracts were arranged for the Canadian fabrication and testing of freeze-dry equipment for dehydrating meats and vegetables at a faster rate than has been reached elsewhere. A master prototype of the *Bobcat*, in the form of an armoured personnel carrier, was delivered. Contracts for aerial surveys in 1960 used the full facilities of all Canadian firms engaged in this work. These survey requirements ranged from topography studies of the Northwest Territories to aerial mapping of densely populated areas for use by civil defence co-ordinating groups. Purchases in connection with the *CF-104* program consisted mainly of ground starting and electrical power sets, generator frequency converters, parachutes, pressurized clothing to overcome the force of gravity, helmets, visors and barometric parachute releases.

A wide range of emergency health and welfare and national survival requirements were purchased. These included packboards, hoists, tackle blocks, pumps, pharmaceuticals, drugs, various types of medical equipment, X-ray machines, dental stores, blood and intravenous solutions.

The 14 district offices across Canada continued to contract for services from local contractors and purchase fresh food and supplies needed for immediate use by regional military units and establishments. Several offices procured urgent and unusual requirements for the movement of the Canadian task force assigned to the United Nations in the

Congo. All offices participated actively in the procurement of materials required for the winter works program.

Defence Production and Development Sharing.—The value of United States prime contracts and subcontracts related to the defence production and development sharing program that were received by Canadian industry amounted to $112,700,000 in 1960 compared with $96,300,000 in 1959. In the subcontracting area, which was virtually non-existent before the establishment of the production sharing program in the autumn of 1958, invitations to bid rose from some 1,900 in 1959 to more than 2,700 in 1960, and replies to these bids rose from approximately 1,400 to more than 2,100. United States subcontracts received by Canadian firms numbered 882 with a value of $51,700,000, compared with 365 valued at $45,300,000 in 1959.

In 1960, negotiations continued toward liberalization and expansion of previous Canada–United States arrangements designed to encourage joint production sharing. Thus, regulatory and procedural restrictions, such as the Buy American Act and duty regulations which prevented Canadian firms from obtaining equal access to United States defence markets, were virtually eliminated with regard to defence supplies. Other problems, such as security, were not completely eliminated but their effects on Canadian suppliers were mitigated. The lessening of these problems did much to establish a climate favourable to production sharing.

Equally important was the intensive educational program carried out in both countries. The United States Department of Defense and the American Services distributed directives and regulations designed to encourage purchasing from Canada. Representatives of many United States companies visited Canadian firms to make facility surveys.

The Department of Defence Production continued its extensive campaign to complete the listing of Canadian companies as sources for United States Government requirements. Departmental officers were able to obtain information and provide guidance to participants in the program as a result of visits to United States procurement centres and to industry, trade associations, trade fairs and symposiums. Of particular importance was the revised booklet on *Canada–United States Defence Production Sharing,* which is widely used in both countries. Other booklets distributed to Canadian industry outlined procedures used by the United States Services in regard to research and development purchasing. In addition, United States buyers were provided with brochures listing Canadian defence companies and the areas in which they had special competence.

The Department provided financial assistance to Canadian firms, primarily in the electronics and aircraft industries, by absorbing part of their preproduction and tooling costs. This was designed to put them in a more equitable competitive position with United States contractors who normally have an advantage because most of their preproduction and tooling costs have been written off under previous contracts. Payments of $630,000 were made to Canadian firms in 1960 for this type of assistance, and new commitments made totalled $307,000.

Increasing emphasis was placed on the research and development aspect of production sharing in 1960. This involved the continuation of financial support for a long-term development program designed to maintain and improve Canadian industry's scientific and technical competence so that it will be able to participate in future United States defence production programs. The Department provided assistance to competent Canadian companies in support of uniquely Canadian projects whose successful development is expected to be of interest to the United States Services. To improve Canadian industry's position to compete for United States financed development requirements, the Department shared the cost of selected projects with the United States Government and the Canadian companies concerned. Contracts valued at $2,425,000 were issued in 1960 for this research and development assistance. Payments amounted to $2,033,000. In addition to these contracts, financial support for a number of other projects was being considered, including several unique Canadian concepts. These projects, and United States requirements approved in principle for support, were valued at $12,000,000. Canadian companies received almost $3,000,000 in United States defence research and development business during the year. The development projects were in such areas as navigational aids, communication equipment, anti-submarine warfare equipment, gas turbine engines, and vertical and short take off and landing (VTOL and STOL) aircraft.

Co-operation in NATO on Research, Development and Production.—The Department of Defence Production was given the responsibility of co-ordinating Canada's activities in connection with the efforts of the North Atlantic Treaty Organization to increase co-operation in research, development and production in order to attain maximum efficiency in standardization and production by member countries. Canada has submitted a number of projects for consideration by the NATO groups, including the *Caribou* aircraft, a counter mortar radar, a land vehicle navigation set and variable depth sonar equipment.

Arising out of these increased activities within NATO, several countries have expressed directly their interest in Canadian equipment, such as the counter mortar radar and the vehicle navigation set. Canadian firms were encouraged to become potential suppliers of military equipment to European countries.

Emergency Supply Planning.—An Emergency Supply Planning Branch was established in the Department in May 1960 to be responsible for the planning and other peacetime arrangements necessary to permit a War Supplies Agency to be brought into effective existence immediately should a nuclear attack be made on this country.

Priority was given to the development of an interim plan to meet the basic needs of the country during the first few weeks after a nuclear attack. This interim plan has three major objectives: (1) the development of an organization scheme for the War Supplies Agency and selection on a standby basis of suitable persons to staff it; (2) the collection of inventory data on major stocks of food, fuel and essential materials, and tabulation of these data in a form suitable for post-attack damage analysis; and (3) the drafting of legal instruments necessary to permit effective control and use of commodities and facilities available after an attack. Good progress was made toward reaching these objectives.

The War Supplies Agency, when brought into existence at the outbreak of a nuclear war, would have full responsibility for all aspects of control over the production, distribution and pricing of supplies, both civil and military, with the exception of production on the farm and the catching and landing of fish.

1.—Net Value of Total Canadian Government Defence Contracts Placed and Expenditures on such Contracts, by Program, 1959 and 1960

NOTE.—Includes all contracts placed by the Department of Defence Production and Defence Construction (1951) Limited on behalf of the Department of National Defence. Net value includes the value of all new contracts awarded together with the value of amendments issued which increased or decreased the commitments of existing contracts.

Program	Net Value of Total Contracts		Expenditures on Contracts	
	1959	1960	1959	1960
	$'000	$'000	$'000	$'000
Aircraft	202,632	343,919	245,893	251,933
Ships	25,989	86,243	35,056	31,203

Totals	**591,556**	**805,871**	**673,441**	**620,592**

PART III.—CIVIL EMERGENCY PLANNING (Civil Defence)

Toward the end of 1958, the Canadian Government initiated a survey of the civil defence situation across the country. The report on this survey was considered in the context of the total military and civilian arrangements necessary to prepare the nation for the possibility of nuclear war. The Government decided, after considering all the relevant factors, to undertake a major rearrangement of federal civil defence functions and to offer to assume directly certain responsibilities previously carried by the provinces and municipalities. This civil defence reorganization became effective on Sept. 1, 1959. It is based on the two main principles that: civil defence should be considered a function or activity of government rather than an organization as such; and that the civil defence function should be divided into clearly defined tasks and assigned to levels of government, and at each level to those departments and agencies best able to undertake and discharge them.

At the federal level, the reorganization may be summarized briefly as follows:—

(1) The Emergency Measures Organization is the co-ordinating agency for all civil emergency planning and for all federal/provincial planning. It is responsible for planning for continuity of government, for tasks hitherto grouped under the designation "civil defence" and not now specifically assigned to some other department of government, and for general liaison with the provinces, NATO and foreign countries on matters relating to civil emergency planning.

(2) The Department of National Defence, more particularly the Army, has been given a primary role in survival operations and has been delegated responsibility for a substantial number of functions that are technical in character such as the complete public warning system, radiation monitoring and fallout prediction, emergency governmental communications, re-entry into damaged areas and support of local authorities in the maintenance of law and order.

(3) The Department of National Health and Welfare (which formerly had the major responsibility for civil defence) will concentrate its attention mainly on advising and assisting provincial authorities with respect to the provision of emergency health and welfare services. This Department has retained responsibility for the operation and management of the Canadian Civil Defence College at Arnprior, Ont.

(4) The Royal Canadian Mounted Police has the responsibility of providing advice and assistance to provinces concerning the preservation of law and order and the control of road traffic under emergency conditions.

(5) Other federal departments and agencies have duties that relate chiefly to carrying on essential functions or to maintaining the country's economic life under conditions of nuclear attack—the Department of Defence Production, the Department of Agriculture, the Department of Finance, the Bank of Canada, the Department of Transport, the Canadian Broadcasting Corporation and the Department of Labour in consultation with the National Employment Service of the Unemployment Insurance Commission.

(6) What was known as Federal Civil Defence Headquarters has disappeared.

Certain emergency functions of government are simply a projection of normal peacetime provincial responsibilities, and in these fields the provinces and municipalities have more experience and knowledge of local conditions than has the Federal Government or its agencies. The following are thus considered to be proper wartime responsibilities for the provincial authorities, with such federal assistance as may prove necessary:—

(1) *Preservation of law and order* and prevention of panic, by the use of their own police, municipal police, and special constables, with whatever support is necessary and feasible from the RCMP and the Armed Services at provincial request.

(2) *Control of road traffic*, except in areas damaged or covered by heavy fallout, including special measures to assist in the emergency movement of people from areas likely to be attacked or affected by heavy fallout.

(3) *Reception services*, including arrangements for providing accommodation, emergency feeding and other emergency supplies and welfare services for people who have lost or left their homes or who require assistance because of the breakdown of normal facilities.

(4) Organization and control of *medical services*, hospitals, and public health measures.

(5) Maintenance, clearance and repair of *highways*.

(6) Organization of municipal and other services for the maintenance and repair of *water and sewage* systems.

(7) Organization of municipal and other *fire-fighting services*, and control over and direction of these services in wartime except in damaged or heavy fallout areas, where fire-fighting services would be under the direction of the Army as part of the re-entry operation.

(8) Maintenance and repair of *electrical utilities*, and the allocation of the use of electricity to meet emergency requirements.

(9) *Training of civilians* as civil defence workers.

In outline, the federal civil emergency planning organization consists of: a Cabinet Committee on Emergency Plans to give policy guidance in all areas of civilian emergency planning for war; the Emergency Measures Organization with a headquarters staff at Ottawa and a regional office in each province; and departmental planning staffs. EMO Regional Officers have been appointed in all ten provinces. Their function is to co-ordinate the emergency planning of federal departments and agencies in the provinces and maintain effective liaison with the provincial governments, the provincial civil defence organization and the appropriate military authorities. The Federal Government pays up to 75 p.c. of the costs of approved provincial and municipal projects.

A booklet entitled *Your Basement Fallout Shelter* was issued by EMO in June 1960, giving instructions for the building of a "do-it-yourself" fallout shelter. In April 1961, the Department of Agriculture, at the request of EMO, published the booklet *Fallout on the Farm*, which describes the possible effects of radioactive fallout on agriculture and recommends protective measures. A third booklet *11 Steps to Survival*, issued in May 1961, outlines in general terms what Canadians can and should do to protect themselves against the potential dangers of nuclear war. Copies may be obtained from Provincial Civil Defence or Emergency Measures Co-ordinators in the provincial capitals.

The Government in 1960 formed the elements of a War Supplies Agency. This Agency, under the Department of Defence Production, will, in time of war, control the distribution and use of essential supplies, their prices and their rationing as required. Emergency facilities for the Federal Government outside Ottawa have been established and action is under way to provide regional facilities in each of the provinces. A peacetime planning nucleus of a wartime agency to control and administer national telecommunications systems is being established within the Department of Transport, to be known as the Emergency National Telecommunications Organization (ENTO).

A Federal-Provincial Conference on Civil Defence Arrangements was held at Ottawa in October 1959; the provinces, with one exception, were represented by provincial Cabinet Ministers and three Federal Cabinet Ministers attended. This was a continuation of a previous conference held in April 1959. Matters reviewed and discussed included evacuation and shelter policy, the role of the Army in civil defence, the Financial Assistance Programme, public information, training of civilians, and emergency communications. Civil emergency planning development and problems within NATO, the United States and the United Kingdom are under continual discussion and study.

A national exercise, under the name of *Exercise TOCSIN 1961*, was undertaken in May, the purpose of which was to test the emergency measures being developed by the federal and provincial governments and the municipalities. More than 1,100 municipalities took part. The exercise emphasized the measures necessary for national survival and continuity of government, and post attack problems that might arise for the federal and provincial governments.

PART I.—SOURCES OF OFFICIAL INFORMATION

Section 1.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds—federal and provincial—is centralized. Information that is not mainly statistical may be secured from the individual department concerned with the particular subject as indicated in the Directory at pp. 1192-1224. Certain government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation and the National Film Board. The Departments of Agriculture, Fisheries, Forestry, Northern Affairs and National Resources, and Mines and Technical Surveys, and such agencies as the National Gallery of Canada, the National Museum of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, though several of the latter have publicity branches.

Government departments, with few exceptions, issue their own lists of reports and publications. Departments are required by statute to publish annual reports, which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, only the services of the six information agencies mentioned above are described.

Section 2 has been prepared for the purpose of presenting to the reader a directory of all sources of information, federal and provincial, thereby directing him to the proper channels from which he may draw published material relating to any particular subject.

The Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257), subsequently amended in March 1953 (SC 1953, c. 18).

The chief aims of the Dominion Bureau of Statistics are: (1) to furnish statistical data bearing on Canada for government and administration, whether municipal, provincial, national or international; and (2) to assist in meeting the needs of non-governmental users of statistics, arising from a growing awareness of the value of statistics to business efficiency and social planning.

Inquiries.—Hundreds of individual requests for information are received each day in the Information Services Division of the Bureau, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort from the statistical side deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless only inquiries of a statistical nature should be directed to the Dominion Bureau of Statistics.

Publications.—Dominion Bureau of Statistics reports cover all aspects of the national economy; the *Canada Year Book* and Official Handbook *Canada* constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

DBS publications are listed in a catalogue of *Current Publications* and in the Queen's Printer's *Catalogue of Canadian Government Publications*. The DBS *Daily Bulletin* and *Weekly Bulletin*, available from the Bureau's Information Services Division at an annual subscription of $1 each, are designed to serve persons wishing to keep closely informed on the full range of published information issued by the Bureau. Subscription orders for DBS publications or orders for single copies should be addressed to the Information Services Division, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

Information Division, Department of External Affairs.—The Information Division has several functions: to make Canada and Canadian policies better known and understood abroad, to provide information within Canada on the external policy of the Government and to assist in the conduct of business with other governments, international organizations and private associations in the field of cultural and educational relations.

Most of the information work is done abroad by officials at Canadian posts. The Information Division assists by formulating and advising on information policy abroad in an effort to ensure that this policy is related to the general objectives of Canadian foreign policy, and by producing and procuring material to keep Missions informed of developments within Canada. Journalists and others who visit Canada to write of Canadian affairs are given assistance from time to time by the Division.

Within Canada the Division produces and distributes various documents on external affairs—statements of government policy and reports on related developments abroad and on the work of the Department generally. The Division also answers inquiries from Canadian sources on these subjects as well as requests for information about Canada made by Diplomatic Missions at Ottawa.

The Division is responsible for dealing with many matters concerning scholarships, art exhibitions, concerts and visits by artists when these involve other countries.

Trade Publicity Branch, Department of Trade and Commerce.—For details, see p. 1018.

Information Services Division, Department of National Health and Welfare.—The responsibility of this Division, in co-operation with other Divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational material on health, welfare and social security, for use throughout the country. This information, issued in the English and French languages, includes books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations, press and magazine features and releases, as well as films and film-strips prepared in co-operation with the National Film Board. Books, pamphlets, posters and displays are distributed in Canada through provincial authorities. The most important periodicals published by the Division are *Canada's Health and Welfare* (monthly), *Canadian Nutrition Notes* (monthly), *Occupational Health Bulletin* (monthly), *Industrial Health Review* (semi-annually) and *Nutrition Bulletin* (annually).

Canadian Broadcasting Corporation.—Television and radio broadcasting are important mediums of information to the public along with newspapers, films and other means of communication. Broadcasting in Canada combines, in one national system, publicly owned stations and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936 the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the people of Canada. Radio is relatively more important in Canada than in most countries because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. The CBC has also pioneered in the development of low-powered repeater stations attached to the network lines, which serve areas unable, because of topographical conditions, to receive an adequate signal from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time. All CBC schedules include news, music, drama, informative talks, children's programs, school broadcasts, public service broadcasts, sports, women's activities, etc. There is a very wide range of radio and television fare, since the CBC not only produces its own programs in the various production centres across Canada but brings in selected programs from the networks of the United States, the British Broadcasting Corporation and other national radio and television systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters in New York, and is credited with having done more to inform listeners of United Nations activities than any other broadcasting system.

Through the International Service operated by the CBC on behalf of the Canadian Government, programs are broadcast over shortwave in 11 languages: English, French, German, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian, Polish and Hungarian. The CBC International Service broadcasts information abroad on life and economic conditions in Canada as part of the general information plan for promoting a better understanding of Canada in other countries. In addition to this regular shortwave program service, the International Service provides special programs for transmission by broadcasting systems in other countries by means of shortwave relays or recordings on tape or disc. A library of musical and spoken-word programs is made available to foreign broadcasting systems through processed transcriptions for wide distribution.

National Film Board.—The National Film Board produces films, film-strips and still photographs on a great variety of subjects. In keeping with its terms of reference, the Board's products are both informative and interpretative, and are widely distributed throughout the world through theatrical and television media and non-theatrical channels.

In Canada, films are seen non-theatrically by the public by means of a distribution network of more than 750 film libraries and voluntary organizations which provide local facilities for community use of films placed in circulation through sales and loans. The Board maintains a preview library of 5,000 prints from many sources.

Non-theatrically abroad, the National Film Board provides films and assistance to libraries operated by the Department of External Affairs in 55 Missions, and to 15 libraries operated in trade posts by the Department of Trade and Commerce. In conjunction with the Canadian Government Travel Bureau, the Board carries out a travel film program to encourage travel in Canada by United States residents by arranging film distribution through 695 outlets in that country and by providing a special library of travel films for television use. Exchange and loan agreements are made with government and other organizations in many countries in order to obtain or extend distribution wherever possible. National Film Board offices abroad are located in New York and Chicago in the United States, New Delhi in India, London, England, and Buenos Aires, Argentina.

The Board's library of approximately 150,000 still photographs serves government departments, commercial photographers, newspapers, periodicals and many other organizations in Canada and abroad.

Section 2.—Directory of Sources of Official Information (Federal and Provincial)

To make the best use of the Directory of Sources of Government Official Information, it is necessary that the reader understand the broad differences in function between federal and provincial departments and their separate fields of work.

Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, census of population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces but certain federal departments are also concerned with specific aspects of these subjects and, as in the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Government of Canada, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Inquiries directed to federal sources for information not of a statistical nature should be sent as a general rule to the individual departments listed in the Directory; inquiries for information of a statistical nature should be addressed to the Information Services Division, Dominion Bureau of Statistics, Ottawa.

Sale of Official Publications.—Under the provisions of the Public Printing and Stationery Act, the Queen's Printer and Controller of Stationery, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications and issues an annual catalogue entitled *Current Publications.*

The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7 (e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer and Controller of Stationery issues the *Daily Checklist of Government Publications* which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer and Controller of Stationery also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an *Annual Catalogue* (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

Newfoundland	St. John's	Ontario	Toronto
Prince Edward Island	Charlottetown	Manitoba	Winnipeg
Nova Scotia	Halifax	Saskatchewan	Regina
New Brunswick	Fredericton	Alberta	Edmonton
Quebec	Quebec	British Columbia	Victoria

Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

(Detailed Directory of Sources of Official Information follows, pp. 1192-1224.)

DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

NOTE.—In the "Federal Data" column, the major source of information on each subject is given first; other sources follow in alphabetical order, with the exception of the National Film Board and the Dominion Bureau of Statistics which appear at the end of each listing with which they are concerned, except where they are the major source.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1961 Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk(*) are available in reprint form from the Information Services Division, Dominion Bureau of Statistics.

Subject and Article	Contributor	Edition	Page
Agriculture—			
Prairie Farm Rehabilitation Program	William Dickson	1938	223–230
Historical Background of Canadian Agriculture	G. S. H. Barton	1939	187–190

Tariff Board.—1961. *Apr. 7*, George Herbert Glass, a member: to be first Vice-Chairman. Francis Leo Corcoran, a member: to be second Vice-Chairman. *May 4*, Walter Donald Ridley Eldon, London, Ont.: to be a member for a term of ten years, effective May 15, 1961.

Tax Appeal Board.—1961. *Mar. 23*, Reginald Sydney Walter Fordham, Ottawa, Ont.: to be again a member, effective Apr. 1, 1961, for a period of ten years. *June 9*, John Douglas Charles Boland, Ottawa, Ont.: to be a member for a period of ten years.

War Veterans Allowance Board.—1961. *June 27*, Gilmour F. Schoales, Winnipeg, Man.: to be a temporary member, effective July 15, 1961.

PART IV.—FEDERAL LEGISLATION, 1960-61

This classified list of federal legislation has been compiled from the Statutes. Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes of Canada in the given volume and chapter.

Legislation of the Fourth Session of the Twenty-Fourth Parliament, Nov. 17, 1960 to July 13, 1961

Subject, Chapter and Date of Assent	Synopsis
9-10 Eliz. II	
Agriculture—	
22 June 1	*An Act to amend the Farm Improvement Loans Act* increases by $100,000,000 the aggregate principal amount of loans which may be made in the loan period ending June 30, 1962.
30 June 22	*The Agricultural Rehabilitation and Development Act* authorizes the Federal Government to enter into agreement with a provincial government for the joint undertaking of alternative land use projects and rural development projects in order to assist farmers with small or otherwise unprofitable units and promote the conservation of soil and water resources.
36 June 22	*An Act to amend the Farm Credit Act* increases the capital of the Farm Credit Corporation from $8,000,000 to $12,000,000 and thus, in effect, increases the maximum lending authority under the Act from $200,000,000 to $300,000,000.
Domestic Trade—	
5 Dec. 20	*The Small Businesses Loans Act* provides, by way of a guarantee of loans made by banks, for intermediate and short-term credit to proprietors of small business enterprises, for the improvement and modernization of equipment and premises.
20 June 1	*The Coal Production Assistance Act* amends the loan agreement made with Bras d'Or Coal Company Limited by removing the obligation of the company to make repayments during the period July 1, 1960-June 30, 1962 and requiring the resumption of repayments on Dec. 31, 1962.

Legislation of the Fourth Session of the Twenty-Fourth Parliament, Nov. 17, 1960 to July 13, 1961—continued

Subject, Chapter and Date of Assent	Synopsis
Domestic Trade— concluded	
24 June 1	*The National Design Council Act* provides for the establishment of a National Design Council, the objects of which are to promote and expedite improvement of design in the products of Canadian industry.
50 July 13	*An Act to amend the Industrial Development Bank Act* extends the definition of "industrial enterprise" to include any industry, trade or other business undertaking of any kind; it also increases the authorized capital of the Bank from $25,000,000 to $50,000,000, the borrowing authority of the Bank from three to five times the aggregate amount of its paid-up capital and reserve fund, and the permissible liabilities of the Bank above $200,000, from a maximum of $75,000,000 to a maximum of $200,000,000. Other amendments relate to administration of the Act.
51 July 13	*An Act to amend the Loan Companies Act* effects certain changes in the investment powers of loan companies incorporated by Parliament, in order that they may correspond more closely to the investment powers of insurance companies.
55 July 13	*An Act to amend the Trust Companies Act* effects certain changes in the investment powers of trust companies incorporated by Parliament, in order that they may correspond more closely to the investment powers of insurance companies.
Finance—	
3 Dec. 20	*Appropriation Act No. 7, 1960* grants certain sums of money for the public service of the financial year ending Mar. 31, 1961
11 Mar. 29	*Appropriation Act No. 1, 1961* grants certain sums of money for the public service of the financial year ending Mar. 31, 1961.
12 Mar. 29	*Appropriation Act No. 2 1961* grants certain sums of money for the public service of the financial year ending Mar. 31, 1961.
15 Mar. 29	*An Act to amend the Fire Losses Replacement Account Act* makes the account available to proprietary corporations named in Schedule D to the Financial Administration Act.
27 June 8	*Appropriation Act No. 3, 1961* grants certain sums of money for the public service for the financial year ending Mar. 31, 1962.
40 July 13	*Appropriation Act No. 4, 1961* grants certain sums of money for the public service for the financial year ending Mar. 31, 1962.
48 July 13	*An Act to amend the Financial Administration Act* places the Crown in the same position as a private person as regards an assignment of a Crown debt incurred under a contract; amounts payable by the Crown in respect of salary and wages may not be assigned. Other amendments refer to uncollectable debts due to Her Majesty and recovery of overpayments of salary, wages, etc.
Fisheries—	
14 Mar. 29	*An Act to amend the Coastal Fisheries Protection Act* revises the definition of a "Canadian fishing vessel"; to be considered within this category, a vessel must comply with the requirements set forth.
23 June 1	*An Act to amend the Fisheries Act* amends the basic legislation under which the fisheries of Canada are administered to bring it into line with present-day requirements and practices. The major amendments permit small draggers to operate up to the three-mile limit on the East Coast; extend the powers of regional and provincial officers in conservation practices; increase penalties in order to cope with problems of water pollution; and relieve fishery officers of the responsibility of exercising any judicial functions and place it in the hands of the courts.
Health and Welfare—	
26 June 1	*Vocational Rehabilitation of Disabled Persons Act* provides for federal sharing of costs incurred by the provinces in carrying out programs of vocational rehabilitation for disabled persons. The Act also encourages the development and co-ordination of federal activities in the field of rehabilitation and the conduct of research in such field
35 June 22	*An Act to provide for the Control of Narcotic Drugs* completely revises previous narcotic legislation and represents a different approach to the control of distribution and sale of narcotics. Part I of the Act has two aspects relating, respectively, to enforcement and the legal distribution of narcotics in accordance with the regulations. Part II deals with the control and custody of narcotic addicts for the purpose of treatment.

Legislation of the Fourth Session of the Twenty-Fourth Parliament, Nov. 17, 1960 to July 13, 1961—continued

Subject, Chapter and Date of Assent	Synopsis
Health and Welfare—concluded	
37 June 22	*An Act to amend the Food and Drugs Act* provides for more effective control of certain drugs, commonly referred to as "goof-balls", for the licensing of persons dealing with such drugs and other matters designed to limit to medical purposes their importation, manufacture, distribution and use.
Insurance—	
13 Mar. 29	*An Act to amend the Canadian and British Insurance Companies Act* makes certain changes in the investment and other powers of Canadian insurance companies and corresponding changes with respect to the classes of assets held in Canada by British insurance companies to cover their liabilities in Canada, as well as other technical amendments proved to be desirable.
16 Mar. 29	*An Act to amend the Foreign Insurance Companies Act* makes certain changes with respect to the classes of assets held in Canada by foreign insurance companies and foreign fraternal societies to cover their liabilities in Canada, as well as other technical amendments proved to be desirable.
33 June 22	*An Act to amend the Export Credits Insurance Act* increases the resources available for the export financing facilities, making it possible for Canadian exporters to sell capital equipment on long-term credit to foreign buyers.
Justice—	
21 June 1	*An Act to amend the Criminal Code* (*Race Meetings*) makes certain changes respecting length of race meetings and number of races per calendar day.
38 June 22	*An Act to amend the Judges Act and the Exchequer Court Act* provides for the appointment of seven additional judges.
42 July 13	*An Act to amend the Combines Investigation Act and Criminal Code* extends for a further year ending Dec. 31, 1962, the moratorium respecting the British Columbia fishing industry.
43 July 13	*An Act to amend the Criminal Code* makes a variety of revisions to the Code, the major amendments being the adoption of a definition and provisions dealing with individuals classed as dangerous sexual offenders, the provision for preventive detention of habitual criminals, the restoration of dangerous driving of motor vehicles as an offence under the Criminal Code, and the transfer to the Criminal Code from the Canada Shipping Act of regulations concerning the operation of small vessels.
44 July 13	*An Act to amend the Criminal Code* (*Capital Murder*) revises the provisions of the Code dealing with the death penalty and also the provisions dealing with the trial of a person charged with an offence for which the penalty is death.
53 July 13	*The Penitentiary Act* replaces previous legislation governing the operation of Canada's penitentiaries. The new Act provides the authority necessary to develop, in the Canadian federal correctional system, those features that relate particularly to the operation of the penitentiaries and is designed to enable the penitentiary service to take full advantage of recent developments made in the science of correcting the offender.
Revenue—	
17 Mar. 29	*An Act to amend the Income Tax Act* makes a number of changes in the Act mainly with respect to computation of student income, repeal of surtax on investment income, application of corporation tax rate in certain income brackets, exemption of pension trusts or corporations, conditions of qualification for investment company classification and gradual application of amendment tax payable by non-resident individuals and corporations on dividends or interest earned in Canada and business conducted in Canada.
18 Mar. 29	*An Act to amend the Tariff Board Act* increases the membership of the Board from five to seven and makes other administrative changes providing for its continuing effective operation.
19 June 1	*The Canada-United States of America Estate Tax Convention Act, 1961* implements the Convention entered into between the Governments of Canada and the United States for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on the estates of deceased persons, signed at Washington Feb. 17, 1961.
45 July 13	*An Act to amend the Customs Tariff* implements the Budget Resolution relating to the Customs Tariff.

Legislation of the Fourth Session of the Twenty-Fourth Parliament, Nov. 17, 1960 to July 13, 1961—continued

Subject, Chapter and Date of Assent	Synopsis
Revenue—concluded	
46 July 13	*An Act to amend the Excise Act* implements the Budget Resolution relating to the Excise Act.
47 July 13	*An Act to amend the Excise Tax Act* implements the Budget Resolution relating to the Excise Tax Act.
49 July 13	*An Act to amend the Income Tax Act* makes extensive changes to the Act relating mainly to certain deductions allowable in computing income for tax purposes, to deferred profit sharing plans, to reduction of personal and income corporation taxes for the years 1962-66 in accordance with new fiscal arrangements with the provinces, and to exemption from income tax for non-profit corporations promoting or carrying on scientific research in Canada.
Transportation—	
2 Dec. 2	*The Railway Operation Continuation Act* provides for the continuation of the operation of railways until May 15, 1961, following the failure of collective bargaining between the major railway companies and representatives of their non-operating employees to produce agreement.
7 Mar. 9	*An Act respecting the Construction of a line of railway in the Province of Quebec by the Canadian National Railway Company from a point at or near mile 72 of the Kiask Falls Subdivision in a northwesterly direction to a point in the vicinity of Mattagami Lake.*
8 Mar. 9	*An Act to repeal certain Laws relating to the Signal Station at Halifax*, such laws referring to the collection of a tax for a serivce now no longer provided.
28 June 8	*An Act to amend the Canadian National Railway Act* increases the number of members of the Board of Directors of the CNR from seven to twelve.
29 June 8	*An Act to amend the Freight Rates Reduction Act* extends for one year the rates applicable under the Freight Rates Reduction Act and increases the authorized expenditure under the Act by $20,000,000.
32 June 22	*An Act to amend the Canada Shipping Act* changes the legislation governing the regulation and administration of shipping to keep it in line with continuing developments. The amendment contains revised definitions of home-trade voyage, inland waters and minor waters; corrects an anomaly with regard to the position of companies incorporated under Irish law in the matter of ship registry; adjusts the tonnage floor with regard to the registration of pleasure yachts; extends authority to maintain safety measures in the operation of small pleasure craft; includes extensive changes regarding the requirement for engineering personnel on ships; and gives additional powers to marine search and rescue co-ordinators.
34 June 22	*An Act to amend the Government Property Traffic Act* increases the penalty for violation of the Act and provides for the voluntary payment of fines.
41 July 13	*The Canadian National Railways Financing and Guarantee Act, 1961* authorizes the provision of moneys to meet certain capital expenditures of the CNR for the period Jan. 1, 1961 to June 30, 1962 and authorizes the guarantee of certain securities to be issued by that company.
54 July 13	*An Act to amend the Railway Act* applies to rapeseed the rates applicable to flaxseed by virtue of the Crow's Nest Pass Agreement.
Veterans Affairs—	
10 Mar. 9	*An Act to amend the Pension Act* provides for increased pensions to disabled veterans and their dependants and increases the scale of pensions for death; permits payment of certain supplementary pensions; permits appeals from decisions of the former Board of Pension Commissioners; and brings up to date certain aspects of the legislation in connection with administration.
39 June 22	*An Act to amend the War Veterans Allowance Act, 1952* increases the monthly rate of allowance payable to recipients, increases the maximum total annual income allowed and includes as recipients certain blind persons.

Legislation of the Fourth Session of the Twenty-Fourth Parliament, Nov. 17, 1960 to July 13, 1961—concluded

Subject, Chapter and Date of Assent	Synopsis
Miscellaneous—	
1 Dec. 2	*An Act to amend the National Housing Act, 1954* is intended to encourage the demand for housing by increasing the loan ratios and extending the periods of repayment for loans made to home owners and home builders and for rental housing; increases from $25,000,000 to $50,000,000 the amount that may be paid out of the Consolidated Revenue Fund for urban redevelopment; increases from $200,000,000 to $500,000,000 the amount of home improvement loans that may be guaranteed by the CMHC; authorizes the Corporation to undertake jointly with provincial governments and municipalities the acquisition, improvement and conversion of existing buildings for housing purposes; authorizes loans to universities for student residential accommodation; authorizes loans to assist in the construction of sewage projects, etc.
4 Dec. 20	*The National Productivity Council Act* provides for the establishment of the said Council, the functions of which are to provide expanding opportunities for increased employment and trade and rising national standards of living by expediting continuing improvement in productive efficiency in the various aspects of Canadian economic activity.
6 Dec. 20	*The Technical and Vocational Training Assistance Act* provides financial assistance for the development and operation of technical and vocational training facilities and programs throughout Canada.
9 Mar. 9	*An Act to amend the Indian Act* removes from the Act the provisions enabling the Governor in Council to enfranchise Indians or bands of Indians without their consent.
25 June 1	*An Act to amend the Representation Act* changes the name of the electoral district of "Humboldt-Melfort" to "Humboldt-Melfort-Tisdale".
52 July 13	*An Act to amend the National Energy Board Act* makes amendments found necessary as a result of the experience obtained in administering the Act for about 18 months and following the consideration of informal submissions received from the oil, gas and pipeline industries.
31 June 22	*An Act to amend the Army Benevolent Fund Act* increases the rates of interest to be credited to the Fund by the Receiver General and makes other administrative changes.

PART V.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; for 1954 in the 1955 Year Book, pp. 1329-1330; for 1955 in the 1956 edition, pp. 1233-1234; for 1956 in the 1957-58 edition, p. 1270; for 1957 in the 1959 edition, p. 1240; and for 1958 in the 1960 edition, pp. 1255-1256. References regarding federal and provincial elections or changes in legislatures or ministries are not included in the following listing but may be found in Chapter II on Constitution and Government.

1959

January: *Jan 1*, Federal-Provincial Hospital Plan went into effect in Ontario and Nova Scotia.

February: *Feb. 20*, Production of the *CF-105 Arrow* discontinued. *Feb. 23*, Celebration of the 50th anniversary of flight in Canada at Bras d'Or Lake, N.S., scene of the first "Silver Dart" flight.

March: *Mar. 17*, Death of Dr. Sidney Earle Smith, Minister of the Department of External Affairs. *Mar. 18*, Prime Minister Macmillan of the United Kingdom arrived in Ottawa for discussions on the situation in Germany, following talks in Russia and France and en route to Washington.

April: *Apr. 10*, Canada's first privately owned and operated nuclear research reactor officially opened at McMaster University. *Apr. 25*, The St. Lawrence Seaway opened to navigation. *Apr. 26*, Premier Castro of Cuba visited Montreal.

May: *May 20*, Prime Minister Menzies of Australi visited Ottawa.

June: *June 5-10*, The Atlantic Congress, consisting of over 600 Parliamentarians and distinguished citizens from NATO countries met at London, England, to examine the record of the first ten years of NATO and discuss prospects for the next ten years; 60 Canadian delegates attended. *June 18*, Her Majesty Queen Elizabeth and Prince Philip arrived at Torbay, Nfld., to begin a 45-day coast-to-coast tour of Canada. *June 20*, Thirty-five fishermen lost their lives in a violent storm in Northumberland Strait. *June 26*, The St. Lawrence Seaway officially opened by Her Majesty Queen Elizabeth and President Eisenhower of the United States in a historic ceremony at St. Lambert, Que.

July: *July 1*, Federal-Provincial Hospital Plan went into effect in New Brunswick. *July 2*, Japan and Canada signed pact pledging co-operation in the peaceful uses of atomic energy. *July 9*, Canadian Brotherhood of Railway, Transport and General Workers was declared by the Canadian Labour Relations Board the bargaining agent of a system-wide unit of operating maintenance employees of the St. Lawrence Seaway Authority. *July 15-29*, A Canadian delegation, headed by the Hon. George Drew, attended the Commonwealth Education Conference in Oxford, England, implementing the program proposed by Canada at the Commonwealth Economic Conference held at Montreal in September 1958. *July 17*, The Canadian Government announced the creation of an Emergency Measures Organization to function in the event of a sudden nuclear war. *July 18*, The Canadian Government announced the creation of a five-man National Energy Board to have wide powers over the oil and natural gas industries and international electric power connections. *July 22*, Official opening of the Queen Elizabeth Power Generating Station (Saskatchewan Power Corporation) at Saskatoon by Her Majesty Queen Elizabeth.

August: *Aug. 1*, The Federal Cabinet met in Halifax, N.S., to bid farwell to Her Majesty Queen Elizabeth and Prince Philip who left by air for London, England. *Aug. 17*, Northern Affairs Minister Hamilton announced the discovery of oil at Eagle Plain, Yukon Territory—the first such discovery in the Yukon.

September: *Sept. 7*, Death of Maurice Duplessis, Premier of Quebec Province for the past 18 years, at Schefferville, Que. *Sept. 9*, Announcement that Canada's first large nuclear power station will be built on the shores of Lake Huron, nine miles north of Kincardine at an estimated cost of $60,000,000. *Sept. 10*, The Hon. Jean-Paul Sauvé chosen to succeed the late Maurice Duplessis as Premier of the Province of Quebec. *Sept. 13*, Two-hundredth anniversary of the battle of the Plains of Abraham. *Sept. 15*, Major-General Georges P. Vanier, D.S.O., M.C., C.D., assumed office as Governor General of Canada succeeding the Rt. Hon. Vincent Massey. Fourteenth session of the General Assembly of the United Nations opened in New York. *Sept. 22*, Dr. Wilder Penfield, Director of the Montreal Neurological Institute and Dr. E. W. R. Steacie, Chairman of the National Research Council, received diplomas of membership in the Academy of Sciences of the U.S.S.R., the first Canadians so honoured. *Sept. 24*, External Affairs Minister Green, head of the Canadian Delegation at the UN General Assembly, presented Canada's views on major world problems, particularly with respect to disarmament and the need for a world program on radiation hazards. *Sept. 26*, Death of A. R. Mosher, Honorary President of the Canadian Labour Congress and chief founder of the Canadian Brotherhood of Railway Employees in 1907.

October: *Oct. 1*, Federal-Provincial Hospital Plan went into effect in Prince Edward Island. *Oct. 5*, John A. MacAulay of Winnipeg elected Chairman of the Board of Governors of the International Red Cross, the first Canadian to be named to the post. *Oct. 6*, Prime Minister Diefenbaker announced grant of $20,000 to the Japanese Red Cross Society for relief of typhoon victims. *Oct. 15-16*, Federal-Provincial Conference held in Ottawa; provincial demands for an immediate increase in tax-sharing payments from the Federal Government rejected. *Oct. 22*, Hearings by the Royal Commission on Transportation began in Quebec City. *Oct. 31*, Canada's largest ice-breaker, *CMS John A. Macdonald*, launched at Lauzon, Que.

November: *Nov. 4*, Alberta Government announced a provincial order banning the use of trading stamps and similar promotional schemes. Agreement on exchange of science experts signed in Moscow by the President of the National Research Council of Canada and the President of the Soviet Academy of Science. *Nov. 6*, Canadian Government announced new program extending to Nov. 30, 1966, the period in which approximately $1,000,000,000 in uranium, undelivered to date under contract, can be produced; this program resulted from the decision of the U.S. Atomic Energy Commission and the U.K. Atomic Energy Authority not to exercise their options to buy beyond Mar. 31, 1963. *Nov. 9*, United Kingdom removed most of the remaining wartime restrictions on foreign imports, except those from Japan and Communist-bloc members; the removal is of special importance to Canadian manufacturers. *Nov. 12*, Douglas J. Mackintosh, Granum, Alta., won title of World Wheat King at Royal Winter Fair, Toronto. *Nov. 16*, Premier Frost of Ontario cut sod for extension of Toronto's subway. *Nov. 17*, Agreement reached with the Soviet bloc on a Canadian proposal for a world-wide study on atomic radiation. *Nov. 18*, Deputy Premier Anastas Mikoyan of U.S.S.R. arrived in Halifax by air for overnight visit en route to Mexico. Polish Legation announced agreement to buy additional wheat and barley on three-year credit terms, bringing total grain purchases from Canada in 1959 to more than $30,000,000. Board of Broadcast Governors announced TV programs must have 45 p.c. Canadian content from Apr. 1, 1961 and 55 p.c. from Apr. 1, 1962. *Nov. 20*, Long-standing problem of federal grants to Quebec universities solved in agreement reached between Federal and Quebec Governments. *Nov. 25*, Prof. Donald C. Creighton, University of Toronto, named member of the Monckton Commission (U.K.) to investigate the constitutional development of the Federation of Rhodesia and Nyasaland. *Nov. 26*, Indians in N.W.T. placed on equal basis with white persons in liquor purchase.

December: *Dec. 2*, Six governors of York University named, marking the official birth of Ontario's tenth university; Dr. Murray G. Ross, Vice-President of the University of Toronto, appointed President on Dec. 3. Ernest L. Bushnell announced resignation as CBC Vice-President. *Dec. 15*, Arrival by air in Toronto of the first group of European tubercular refugees and their families, part of Canada's share in World Refugee Year. *Dec. 16*, Death of J. J. Bowlen. Lieutenant-Governor of Alberta. *Dec. 17*, National Housing Act mortgage interest rate raised to 6¾ p.c. from 6 p.c. *December*, Lieut.-Gen. E. L. M. Burns left command of the UN Emergency Force in the Middle East to serve as Canadian representative on the Ten-Nation Disarmament Committee.

1960

January: *Jan. 1*, Discrimination against dollar imports into Finland ended. Toll charge of $64 introduced for each aircraft flying an international route over Canada to cover cost of providing them with navigational aids. *Jan. 2*, Death of Hon. Jean-Paul Sauvé, Premier of Quebec for 114 days. *Jan. 4*, Willis Rodney Whitney Award presented to Dr. Morris Cohen of the National Research Council by the U.S. National Association of Corrosion Engineers for outstanding scientific achievement in corrosion. *Jan. 5*, Charles F. Comfort, mural painter and Canadian Army artist in the Second World War, named Director of the National Gallery, succeeding Alan Jarvis. *Jan. 7*, Antonio Barrette, former Quebec Labour Minister, became Premier of Quebec. *Jan. 9*, Her Majesty Queen Elizabeth approved appointment of Princess Alexandra of Kent as Colonel-in-Chief of the Queen's Own Rifles of Canada. *Jan. 19*, Announcement made that Canada's second nuclear research centre, to be known as the Whiteshell Nuclear Research Establishment, will be built on the east bank of the Winnipeg

River and 60 miles northeast of Winnipeg. Canada meeting India's request for $25,000,000 worth of Canadian commodities and equipment under the Colombo Plan. *Jan. 21*, Prime Minister Kishi of Japan visited Ottawa; trade relations were the central theme of discussions with Prime Minister Diefenbaker and members of the Cabinet. *Jan. 30*, Discrimination against dollar imports in favour of OEEC countries of Europe ended by Denmark.

February: *Feb. 3*, Announcement that Canada will contribute $25,000,000 toward the building of a transpacific cable as part of a world-girdling Commonwealth communication system. *Feb. 7*, Death of Dr. Robert Hamilton Coats, founder of the Dominion Bureau of Statistics and Dominion Statistician from 1918-42. *Feb. 8*, Federal-provincial conference on centennial celebrations agreed to support an application by the City of Montreal for a World Fair in that area in 1967. PART VI.—STATISTICAL SUMMARY OF THE PROGRESS OF CANADA 1871-1960

Newfoundland entered Confederation in 1949 and figures for that province are included with Canadian statistics as they have become available. Under each item in the following Summary the inclusion of Newfoundland data for the first time is indicated by a black dot(•). If no dot is shown on any of the years from 1951-60 for a particular item, Newfoundland is excluded throughout. In some instances the symbol does not apply. Revisions of figures published in previous editions of the Year Book are not indicated in this Summary.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

NOTE.—*The interpretation of the symbols used in this table will be found facing p. 1 of this volume.*

provinces only.

[5] Preliminary. Does not include Canadian Wheat Board interim and final payments.

[6] Includes other field crops, e.g., rye and flaxseed, not specified.

[7] On farms only.

[8] Figures for the decennial census years 1901-1911 are for the immediately preceding years.

[9] Value of factory shipments.

[10] Years ended Mar. 31 prior to 1931.

timated; excludes Yukon and Northwest Territories.

[10] In January 1950, the chartered banks' liability for such of their notes as then remained outstanding was transferred to the Bank of Canada.

[11] As at June 30 from 1871 to 1901. Annual averages of month-end figures from 1911 to 1951. As at Dec. 31 for 1957 and subsequent years.

[12] Figures for 1957 and subsequent years not strictly comparable with previous years.

[13] Includes deposits of federal and provincial governments and also deposits elsewhere than in Canada from 1901.

[14] 1924.

---

about 90 p.c. of all provincial business. The figures include all the large and most of the small provincial companies.

[5] Excludes fraternal insurance.

[6] Includes annuity contracts for 1957 and subsequent years.

APPENDIX

This Appendix brings up to the date of going to press (Aug. 31, 1961) certain information included in Chapter II, which was prepared as at Jan. 1, 1961.

Page 61

No change was made in the membership of the Federal Cabinet.

Page 65

No Senators were appointed during the period but three vacancies occurred through the deaths of Hon. Ray Petten, Newfoundland; Hon. Felix Patrick Quinn, Nova Scotia; and Hon. William Daum Euler, Ontario.

Page 73

The following federal by-elections were held between Jan. 1 and Aug. 31, 1961:—

Electoral District	*Name of New Member*	*Political Affiliation*	*Date*
Leeds, Ont	John R. Matheson	Lib	May 29, 1961
Restigouche-Madawaska, N.B.	Edgar E. Fournier	P.C.	May 29, 1961
Kings, P.E.I.	Margaret Mary Macdonald	P.C.	May 29, 1961
Esquimalt-Saanich, B.C.	George Louis Chatterton	P.C.	May 29, 1961

Page 85

The following corrects an error in Table 28 showing the Fifteenth Ministry of Manitoba:—

Office	*Name*	*Date of First Appointment*	*Date of Present Appointment*
Premier and Acting Provincial Treasurer	Hon. Dufferin Roblin	June 30, 1958	June 30, 1958
Minister of Public Works	Hon. John W. M. Thompson	June 30, 1958	Dec. 17, 1959
Attorney General and Acting Minister of Municipal Affairs	Hon. Sterling R. Lyon	June 30, 1958	June 30, 1958
Minister of Education	Hon. Stewart E. McLean	June 30, 1958	Aug. 26, 1960 June 30, 1958
Provincial Secretary and Minister of Industry and Commerce	Hon. Edward Gurney V. Evans	June 30, 1958	Dec. 17, 1959 Aug. 7, 1959
Minister of Health and Public Welfare	Hon. George Johnson	June 30, 1958	June 30, 1958
